QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 249.] **Marriages**—October, November, December, 1910.
Births and Deaths—January, February, March, 1911. [Price 9d.]

NOTE.—The figures in this publication are tabulated mainly from statistical Returns furnished by the local Registrars, and for this reason may not be found to correspond exactly with the authoritative figures for the whole year to be published later in the Annual Report.

General Register Office, Somerset House,
26th April, 1911.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1911 is estimated at 45,930,823 persons; that of England and Wales at 36,586,454, that of Scotland at 4,981,402,* and that of Ireland at 4,362,967. These estimates are based upon the numbers enumerated at the Censuses of 1891 and 1901.

In the United Kingdom 280,097 *births* and 183,804 *deaths* were registered in the three months ended 31st March 1911. The natural increase of population was, therefore, 96,293. The number of *persons married* in the quarter ended 31st December 1910 was 172,848.

The birth-rate in the United Kingdom in the *first* quarter of 1911 was 24·7, and the death-rate 16·2, per 1000 of the estimated population. The marriage-rate in the *fourth* quarter of 1910 was 15·1 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to a Return issued by the Board of Trade it appears that in the three months ended 31st March 1911, the total passenger movement between the United Kingdom and places out of Europe

* At the time of going to Press a Return was issued by the Registrar-General of Scotland showing that the population of Scotland was 4,759,521 at the Census of 1911.

showed a net balance outward of 70,973 passengers, compared with a net balance outward of 72,642 passengers in the corresponding period of the previous year.

The net balance outward among British subjects amounted to 62,161 persons. Of these 46,076 were English passengers, 1,185 Welsh, 11,473 Scottish, and 4,002 Irish, whilst there was a balance inward of 575 British Colonial passengers. Compared with the numbers in the corresponding period of the previous year the net balance outward of English passengers showed an increase of 52 per cent., that of Welsh an increase of 87 per cent., that of Scottish an increase of 19 per cent., and that of Irish an increase of 29 per cent., whilst the net balance inward of British Colonial passengers showed a decrease of 25 per cent.

Among foreign passengers there was a net balance outward of 8,812, against a net balance outward of 29,604 in the corresponding period of the previous year.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,009 registration sub-districts of England and Wales in the three months ended 31st March 1911; and the MARRIAGES in 15,811 churches or chapels, in 15,787 registered places of worship unconnected with the Established Church, and in 634 Superintendent Registrars' Offices, in the three months ended 31st December 1910.

Marriages.

In the *fourth* quarter of 1910 the marriages of 147,160 persons were registered, being equal to an annual rate of 16·1 persons married per 1000 of the estimated population, against an average rate of 16·8 per 1000 in the fourth quarter of the ten years 1900–1909.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 12·3 in Herefordshire, 13·3 in Carnarvonshire, 13·4 in Buckinghamshire and in Denbighshire, 13·7 in Sussex, and 13·8 in Somersetshire; the highest rates were 18·1 in Warwickshire and in Glamorganshire, 19·9 in Norfolk, 20·2 in Carmarthenshire, 20·6 in Suffolk, and 21·2 in Cambridgeshire.

Births.

The births registered in the *first* quarter of 1911 numbered 223,588, and were in the proportion of 24·8 annually per 1000 of the population; this is 2·7 per 1000 below the mean birth-rate in the ten preceding first quarters, and is the lowest birth-rate recorded in any first quarter since the establishment of civil registration. In registration counties with populations exceeding 100,000, the lowest birth-rates during the quarter were 17·8 in Carnarvonshire, 18·5 in Sussex, 19·6 in Northamptonshire, 20·1 in Kent, and 20·6 in Dorsetshire and in Gloucestershire; the highest rates were 27·5 in Staffordshire and in Northumberland, 29·1 in Nottinghamshire, 31·3 in Carmarthenshire, 31·4 in Durham, 34·5 in Glamorganshire, and 35·9 in Monmouthshire.

In the 77 great towns the birth-rate averaged 24·9 per 1000, ranging from 14·5 in Hastings, 15·1 in Hornsey, 16·0 in Bournemouth, 16·7 in Halifax, and 18·3 in Handsworth (Staffs.) to 31·5 in Merthyr Tydfil, 33·6 in St. Helens, 35·3 in Coventry, 35·9 in Swansea, and 41·8 in Rhondda. In the 136 smaller towns the mean birth-rate was 23·5 per 1000, and in the remainder of England and Wales, excluding the 213 chief towns, it was 25·1.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 80,447, against 83,784, 68,281, and 85,286 in the first quarters of 1908, 1909, and 1910, respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 31s. 8d. 31s. 10d., and 30s. 5d., respectively in the preceding three quarters, was 30s. 4d. last quarter. The average wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:— of inferior beef, 3½d.; of prime beef, 7d.; of inferior mutton, 5½d.; of prime mutton, 9d. Compared with the average prices in the preceding three months, the price of inferior beef showed a decrease of ½d., and that of prime beef a decrease of ¼d. The price of inferior mutton showed an increase of ¼d., and that of prime mutton an increase of ½d. also. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 16s. 5d. per ton, against 18s. 0d. per ton in the first quarter of 1910. The average price of Consols was 80l. 7s. 1d., having been 79l. 9s. 5d. in the preceding quarter. The minimum annual rate per cent. of discount charged by the Bank of England which had been reduced from 5l. to 4l. 10s. on the 1st December, 1910, was further reduced to 4l. on the 26th January, 1911, to 3l. 10s. on the 16th February, and to 3l. on the 9th March. The mean rate during the quarter was 3l. 15s. 4d.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 686,607 exclusive of lunatics in county and borough asylums, registered hospitals and licensed houses, of casual paupers, of persons receiving out-door medical relief only, and of patients in the fever and small-pox hospitals of the Metropolitan Asylum District. Of these 686,607 persons, 284,333 received in-door, and 402,274 out-door, relief. The proportion of the population in receipt of poor-law relief was 18·8 per 1000, against 23·7 and 22·8 per 1000 respectively in the first quarters of 1909 and 1910.*

Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom, together with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 71–91.

One of the features of the period was the almost entire avoidance of these islands by the centres of cyclonic disturbances, which in nearly all cases followed paths in the neighbourhood of Iceland on the one side, or the Bay of Biscay and the Continent on the other. The barometric depressions which crossed the British Isles were in most instances small secondary systems from the main disturbances in the far north. Under these circumstances the barometer was usually well above its normal level, and although the quarter was breezy, it was not of a very stormy character. There were many brilliantly fine periods, an absence of fogs of any great density, long spells of rainless or nearly rainless weather, no snowstorms of any

* Owing to the discontinuance after 1st January, 1911, of the disqualification for old age pensions ensuing on the receipt of Poor Law Relief at any time since 1st January, 1908, the total number of persons on the relief lists is much reduced in 1911 as compared with previous years.

importance, and the temperature of the air was above the average most of the time. There were occasional frosts in each month, as a rule of slight intensity, the only severe one occurring in the opening days of February.

During the first twelve days of January the distribution of pressure underwent considerable variations, disturbances moving in various directions, and strong or high winds were felt daily in many parts of the country. From the 1st to the 3rd, with a disturbance beyond the North Sea, Northerly to Easterly winds prevailed, attaining the force of a strong gale in Shetland, and a whole gale on the Yorkshire coast. South-Westerly and Westerly winds then ruled until the 10th, rising to a gale at times in several localities. On the 11th and 12th the conditions were governed by a complex disturbance, one portion of which passed eastward across Scotland to Sweden, the other moved southward across England and France. They produced the two most stormy days of the quarter, the wind mainly Northerly and North-Easterly, blowing a gale or a strong gale in many districts, a whole gale on the coasts of Donegal, Cornwall and Yorkshire, and storm force at Scilly, where the anemometer registered a wind velocity of 69 miles in an hour. Though these early days were very disturbed there were only a few heavy rainfalls, most of them in the west of Scotland, more than 2 in. at Gruline, Mull, on the 5th, and at Cruachan on the 10th, while over an inch fell round Dover on the 11th.

After January 12th the conditions were greatly altered, and for several weeks, down to the middle of February, areas of high barometric pressure were in the ascendant over these islands and Western Europe generally; but notwithstanding the existence of the anti-cyclones, the weather itself differed from time to time. There were successive days of cloudless or all but cloudless skies, with many hours of bright sunshine; others were overcast and dull to gloomy, and in some localities there was a good deal of fog at times. The temperature also varied, maintaining a fairly high level during January, rising as high as 55° or 56° at a number of places between the 25th and 28th, at Killarney to 59° . Without any marked alteration in the pressure distribution a sudden change of temperature occurred in the last night of the month, and on the morning of February 1st there was frost in nearly every part of the kingdom, the shaded thermometer sinking below 20° at numerous stations on the mornings of the 1st and 2nd, to 12° at Wokingham, 11° at Balmoral, and 10° at Garforth. The afternoons were also cold, maximum 31° at Wisley, Whitworth Park, Manchester, and Glasgow, and 30° at Markree Castle and Ruthwell. After this the cold moderated somewhat, but temperature continued below the normal for some days. A striking feature of the anticyclonic period was the dryness of the weather. At Bidston Observatory, Birkenhead, and Ruthin, no rain was registered on 26 successive days, at Mayfield, Staffs., and Newcastle, Wicklow, on 28, at Braceland and Worcester Lodge, Forest of Dean, Bath, Colwyn Bay and Birmingham on 29, and at Dursley, Gloucestershire, on 37 days. Over a very extensive region there were only one or two trifling showers of rain or deposition of moisture in the form of dew or fog in five weeks.

The conditions gradually became less settled after February 12th, and from the 15th onward strong South-Westerly and Westerly winds and gales were reported daily. These were accompanied by general mildness, and frequent and heavy rain, there being many records of more than an inch in a day, nearly $2\frac{1}{2}$ in. at Cruachan and Inverary on the 17th, nearly $3\frac{1}{4}$ in. at Seathwaite on the 18th, and

over 2 in. at Arncliffe on the 21st. In the West of Scotland the weather was extremely wet, more than 11 in. of rain falling at Cruachan in twelve days. Many day temperatures above 55° were recorded, and on the 17th Torquay touched 60°.

Singular weather conditions were experienced during March. The winds were North-Westerly in the early days, afterwards Northerly to Easterly, and while gales were not frequent the number of winds of forces 4-7 was considerably above the average. Temperature was within moderate limits most of the time, but there was sharp frost in isolated situations on various dates, 22° at Balmoral, Fort Augustus, Llangammarch Wells and Markree Castle, and there were a few instances of afternoon maxima above 60°, on the 22nd 63° at Tottenham, and on the 30th at Arlington. Dull weather, with a deficiency of sunshine, and frequent but not heavy rain, ruled over southern, midland and eastern England, the conditions improving greatly to westward and northward, exceptionally brilliant in western Scotland and the Hebrides, where the sunshine records exceeded 170 hours, 192 hours at Oban, against between 52 hours and 80 hours in the Thames Valley and neighbouring counties. In Ireland, north-western England and the greater part of Scotland the month was also very dry, an absolute drought in several localities, 18 consecutive rainless days at Grulive, and 24 at Cargen, Dumfries. Heavy rain fell pretty generally over the southern half of England on the 12th, up to an inch or a little over at Sheepstor, Rousdon, Portland Bill, Ventnor, Brighton and Eastbourne.

For the quarter as a whole the *mean temperature* was above the average excepting in England South-West and the English Channel. The divergence, however, exceeded a degree only in England North-West.

With the long spells of dry weather the *rainfall* of the quarter was less than the normal excepting in England East. Over the western districts of England the deficiency was 1 $\frac{3}{4}$ in.

The general dullness of March more than balanced the fine spells of January and February, so that with the exception of a small excess in England North-West the duration of *bright sunshine* was less than the normal, the deficiency amounting to 30 hours in England Central, East and North-East, and 40 hours in the English Channel.

Deaths.

The deaths registered in England and Wales last quarter numbered 143,141, and were in the proportion of 15·9 annually per 1000 persons living; this rate is 1·7 per 1000 below the mean rate in the ten preceding first quarters. In registration counties with populations exceeding 100,000, the death-rates ranged from 13·3 in Middlesex and in Essex, 13·5 in Kent, 13·6 in Leicestershire, 13·7 in Northamptonshire, and 13·9 in Worcestershire, to 18·2 in Herefordshire, 18·5 in Devonshire, 19·0 in Monmouthshire, 19·6 in the North Riding of Yorkshire, and 20·2 in Carmarthenshire.

The 143,141 registered deaths included 73,057 of males and 70,084 of females, the death-rate among males being 16·8, and that among females 15·0 per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding first quarters, the death-rate of both males and females showed a decrease of 1·7. Out of equal numbers living, the deaths of males were to those of females as 112 is to 100; the mean proportion in the first quarters of the ten preceding years having been the same.

Urban and Rural Mortality.

In the 77 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1911 is estimated at more than seventeen millions, the death-rate calculated without reference to age and sex constitution of the populations was 15·8 per 1000 living; the rates in the three preceding first quarters in the great towns having been 17·9, 18·7, and 14·9. The crude rates in the several towns ranged from 7·6 in Kings Norton, 8·5 in Hornsey and in Handsworth (Staffs.), and 10·4 in East Ham to 19·2 in Oldham, 19·3 in Dewsbury and in Swansea, 19·4 in Liverpool, 20·0 in Sheffield, 20·7 in Coventry, and 23·1 in Middlesbrough.

In the 136 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at more than five millions in 1911, the crude death-rate was 14·7 per 1000 living; the rates in the three preceding first quarters in the group of smaller towns having been 17·1, 17·1, and 14·5.

In the remainder of England and Wales, with an aggregate population estimated at more than fourteen and a quarter millions, of whom more than six and a half millions live in small towns and more than seven and a half millions in rural districts, the crude death-rate was 16·3 per 1000 living; the rates in the three preceding first quarters having been 17·8, 18·1, and 16·1.

Crude death-rates, that is the proportions of deaths recorded to the estimated populations amongst which they occur, regardless of age and sex, are a fairly trustworthy test of relative mortality when the rates for short periods in the same area are compared; but when one area is compared with another, crude death-rates should be supplemented by rates in which the age and sex constitution of the respective populations is taken into account. The following statement shows the crude and corrected death-rates in each of the above areas. (See also Table III. page xv.)

First Quarter, 1911.

	Crude Death-rates.	Corrected Death-rates.
England and Wales	15·9	15·9
77 Great Towns	15·8	16·8
136 Smaller Towns	14·7	15·4
England and Wales, less the 213 Towns	16·3	15·4

It should moreover be stated that owing to the difficulty of distributing to their proper areas the deaths occurring in public institutions the death-rate in the rural area is probably somewhat overstated.

Mortality at Different Ages.

Of the 143,141 deaths registered in England and Wales last quarter, 25,795 were those of infants under one year of age, 73,303 those of persons aged between one year and sixty-five years, and 44,043 those of persons aged sixty-five years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 115 per 1000, this proportion was 15 per 1000 below the average in the ten pre-

ceding first quarters. Among registration counties with populations exceeding 100,000, the lowest proportions were 88 in Sussex, 91 in Surrey, 93 in Dorsetshire, 94 in Hampshire and in Buckinghamshire, and 95 in Hertfordshire. The highest proportions were 130 in Cornwall, 138 in Cumberland, 144 in the North Riding of Yorkshire, 145 in Monmouthshire, and 164 in Carmarthenshire.

In the 77 great towns infantile mortality averaged 115 per 1000 births, being the same as that in England and Wales as a whole. Among the several towns the lowest proportions were 57 in Hornsey, 65 in Wallasey, 79 in Kings Norton, and 80 in Hastings and in Great Yarmouth; the highest were 149 in Sheffield and in Rotherham, 151 in Grimsby, 158 in Blackburn, 165 in Dewsbury, and 186 in Middlesbrough. Among the 136 smaller towns infantile mortality averaged 114 per 1000 births, ranging from 38 in Winchester, 48 in Watford, 53 in Waterloo with Seaforth, 56 in Finchley, 58 in Eccles and in Widnes, and 60 in Ilford to 173 in Heywood, 184 in Wednesbury and in Glossop, 192 in Kettering, 196 in Bacup, and 205 in Stalybridge. Excluding these 213 towns, infantile mortality in the remainder of England and Wales was in the proportion of 116 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty-five years was at the annual rate of 8·7 per 1000 of the estimated population at this group of ages. In the 77 great towns the mean mortality at this age-group was 9·4 per 1000, the death-rates ranging from 3·5 in Kings Norton, 4·1 in Hornsey, 4·2 in Handsworth (Staffs.), 5·8 in Ipswich, 6·2 in Leicester, and 6·3 in Bournemouth to 12·0 in St. Helens, 12·2 in Oldham, 12·3 in Coventry and in Liverpool, 13·4 in Sheffield, and 15·1 in Middlesbrough. In the 136 smaller towns the mortality at this age-group averaged 8·1 per 1000.

Among persons aged sixty-five years and upwards the mortality was at the annual rate of 104·6 per 1000 of the estimated population at this group of ages. In the 77 great towns the mean mortality at this age-group was 111·9 per 1000; the lowest rates were 69·0 in Kings Norton, 76·5 in Handsworth (Staffs.), 85·8 in West Bromwich, and 87·0 in Norwich and in Devonport; the highest rates were 140·0 in Swansea, 143·0 in Huddersfield, 144·2 in Dewsbury, 155·4 in Burnley, and 158·5 in Bootle. In the 136 smaller towns the rate averaged 107·5 per 1000.

Mortality from certain Epidemic Diseases.

The 143,141 deaths from all causes include—

6,147	that were attributed to measles,	
2,631	“ “	whooping-cough,
1,439	“ “	diarrhoea and enteritis
		(under 2 years),
1,369	“ “	diphtheria,
515	“ “	scarlet fever,
421	“ “	enteric fever,
9	“ “	small-pox,
2	“ “	typhus,
2	“ “	pyrexia of uncertain origin.

Thus, to the above-mentioned epidemic diseases in the aggregate, 12,535 deaths were referred last quarter.

The average mortality from diarrhoea and enteritis under 2 years of age, typhus, and pyrexia of uncertain origin, is not available for comparison; the rates for each of the other diseases, except measles, were below the decennial average.

Measles was returned as the cause of 6,147 deaths last quarter, corresponding to an annual rate of 0·68 per 1000 of the population, or 0·35 per 1000 above the average in the first quarters of the preceding ten years. Of the 55 registration counties, eight were free from measles mortality, and the death-rate did not exceed 0·03 per 1000 either in Norfolk, Wiltshire, or Carnarvonshire. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 1·00 in Surrey, 1·23 in Devonshire and in the North Riding of Yorkshire, 1·29 in London, 1·38 in Warwickshire, and 1·39 in the West Riding of Yorkshire. In the 77 great towns measles caused an average mortality of 0·95 per 1000. In eleven of these towns no deaths from this disease were registered, and the death-rate was only 0·01 per 1000 in Bradford. The highest death-rates were 2·17 in St. Helens, 2·24 in Rhondda, 2·54 in Rotherham, 2·57 in Coventry, 3·44 in Devonport, and 5·63 in Sheffield. In the 136 smaller towns, the average death-rate was 0·70 per 1000 living, the highest mortality among these towns being in Colne, Barking Town, Aldershot, Exeter, Stalybridge and Chatham in which town it caused a rate of 6·77 per 1000. In the remainder of England and Wales the average measles death-rate was 0·35 per 1000.

Whooping-cough accounted last quarter for 2,631 deaths, and for a death-rate of 0·29 per 1000 annually, which is below the average rate in the ten previous corresponding quarters by 0·06 per 1000. In Merionethshire no death from whooping-cough was registered last quarter, and the death-rate did not exceed 0·04 per 1000 in Bedfordshire. Among counties with populations exceeding 100,000, the highest death-rates from this cause were 0·48 in Gloucestershire, 0·49 in Norfolk, 0·54 in Middlesex, 0·57 in Cumberland, and 0·87 in the North Riding of Yorkshire. In the 77 great towns whooping-cough caused an average death-rate of 0·32 per 1000 living. No deaths from this disease occurred in eight of these towns, and the death-rate did not exceed 0·02 in Bolton or in Cardiff; but it was equal to 1·38 in Willesden, 1·42 in Norwich, and 1·47 in Middlesbrough. In the 136 smaller towns the average death-rate from whooping-cough was 0·25 per 1000, the mortality being highest in Felling, Ince in Makerfield, Oldbury and Kettering. In the remainder of England and Wales whooping-cough caused an average mortality of 0·27 per 1000 annually.

Diarrhœa and *enteritis* (under 2 years) was the assigned cause of 1,439 deaths last quarter, corresponding to an annual rate of 0·16 per 1000 of the population at all ages. In Cardiganshire no death under 2 years from these diseases was registered. Among counties with populations exceeding 100,000 persons, the highest death-rates were 0·25 in Staffordshire and in Monmouthshire, 0·28 in Carmarthenshire, 0·29 in Nottinghamshire, 0·31 in Glamorganshire, and 0·33 in the North Riding of Yorkshire. In the 77 great towns the average death-rate from these causes (under 2 years) was equal to 0·17 per 1000 of the population at all ages. No deaths were recorded in 7 of these towns, the highest death-rates being 0·42 in Salford, 0·43 in Rhondda, 0·50 in Stoke on Trent, 0·52 in Burnley, and 0·85 in Middlesbrough. In the 136 smaller towns the average death-rate was 0·16 per 1000, the mortality being highest in Abertillery, Mansfield, Ilkeston, and Glossop. In the remainder of England and Wales the death-rate averaged 0·15 per 1000.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,369 deaths, a number corresponding to an annual rate of 0·15 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·06 per 1000. In five of the registration counties no deaths from this disease occurred last quarter, and the death-rate was only 0·03 in Wiltshire. Among counties with populations exceeding 100,000, the highest death-rates were 0·23 in Cambridgeshire, in Durham, and in Glamorganshire, 0·24 in Carnarvonshire, 0·25 in Carmarthenshire, and 0·31 in the North Riding of Yorkshire. The average death-rate from diphtheria in the 77 great towns was equal to 0·17 per 1000 of their aggregate population. Three of the towns were free from diphtheria mortality, and the death-rate was only 0·04 per 1000 in Horsey. The highest death-rates were 0·32 in Stoke on Trent and in Cardiff, 0·37 in Middlesbrough, 0·44 in Portsmouth, 0·48 in Swansea, and 0·50 in Barrow in Furness and in Leeds. In the 136 smaller towns the mortality from this disease averaged 0·14 per 1000, the rate being highest in Rowley Regis, Finchley, Jarrow and Torquay. In the remainder of England and Wales diphtheria caused an average mortality of 0·13 per 1000 living.

Scarlet fever accounted last quarter for the deaths of 515 persons, equal to a rate of 0·06 per 1000 living, or 0·05 per 1000 less than the decennial average rate for the first quarter. Thirteen of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·07 in Northamptonshire, in the West Riding of Yorkshire, in Cumberland and in Monmouthshire, and 0·08 in Glamorganshire, 0·11 in Staffordshire and in Warwickshire, and 0·12 in Lancashire. In the 77 great towns scarlet fever accounted for an average mortality of 0·07 per 1000 annually. No deaths from this disease were recorded in twenty of these towns, and the death-rate was only 0·02 per 1000 in Willesden, in West Ham, in East Ham, and in Sunderland. The highest scarlet fever death-rates were 0·21 in Bolton, 0·22 in Liverpool, 0·27 in Stoke on Trent, 0·39 in Coventry and 0·47 in Bury. In the 136 smaller towns the average death-rate from scarlet fever was 0·06 per 1000 living, the highest mortality being in Chorley, Keighley and Todmorden. In the remainder of England and Wales this disease caused an average death-rate of 0·04 per 1000 living.

Enteric fever.—As in the returns for 1910 deaths from *enteric fever* have been tabulated in the present return separately from those due to *typhus*, or to *pyrexia* of uncertain origin. They numbered 421, equal to a rate of 0·05 per 1000. The inclusion of 2 deaths from typhus and 2 from pyrexia would not alter this rate, which is 0·03 per 1000 below the average death-rate from “*fever*” in the first quarters of the previous ten years. In ten counties no deaths from enteric fever were returned last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·07 in Berkshire, and 0·08 in Lancashire, in the West Riding of Yorkshire and in Monmouthshire. In the 77 great towns enteric fever caused an average mortality of 0·05 per 1000 annually. In twenty of these great towns no deaths from enteric fever occurred, and the death-rate did not exceed 0·02 per 1000 in London, East Ham, or in Sunderland. The highest enteric fever death-rates were 0·15 in Great Yarmouth, and in Newport (Mon.), 0·16 in Grimsby, and 0·43

in Wigan. In the 136 smaller towns enteric fever caused an average mortality of 0·05 per 1000 annually, the rate being highest in Eccles, Swinton and Pendlebury, and Todmorden. In the remainder of England and Wales the death-rate from enteric fever averaged 0·04 per 1000.

Nine deaths from *small-pox* were registered last quarter in England and Wales, the numbers in the four quarters immediately preceding having been 8, 8, 1, and 2, respectively. Of the 9 deaths last quarter 8 belonged to London.

Violent Deaths.

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 5,077 last quarter, and corresponded to an annual rate of 0·56 per 1000 of the population, which is 0·04 per 1000 below the average in the ten preceding first quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·29 in Hertfordshire, 0·33 in Middlesex, 0·35 in Carnarvonshire, 0·37 in Berkshire and in Bedfordshire, and 0·38 in Dorsetshire and in Denbighshire; the highest rates were 0·70 in Durham, 0·71 in Carmarthenshire, 0·75 in Glamorganshire, 0·80 in the North Riding of Yorkshire, 0·84 in Monmouthshire, and 0·90 in Lancashire. In the 77 great towns the mean rate was 0·51 per 1000 living. Among the several towns the rate was only 0·05 in Aston Manor, 0·08 in Hornsey, and 0·11 in Handsworth (Staffs.); but it rose to 0·75 in Liverpool, 0·77 in Rotherham, 0·82 in Coventry, 0·84 in Sunderland, and 0·89 in Bootle.

Certification of Causes of Death.

Of the 143,141 deaths registered in England and Wales last quarter, the causes of 131,222, or 91·7 per cent., were certified by registered medical practitioners, and the causes of 9,998, or 7·0 per cent., by coroners, after inquest; whilst the causes of the remaining 1,921, or 1·3 per cent., were not certified, the average percentage of uncertified deaths in the ten preceding first quarters having been 1·7. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Oxfordshire, Wiltshire, Devonshire, Cornwall, Gloucestershire, Leicestershire, Cheshire, the West, East and North Ridings of Yorkshire, and Glamorganshire, but it reached 3·0 in Northamptonshire, 3·1 in Durham and in Cumberland, 3·2 in Shropshire, 3·5 in Berkshire, and 4·4 in Carnarvonshire. In the 77 great towns the mean proportion of uncertified deaths was 0·8 per cent.; but whilst no uncertified deaths were registered in Croydon, Willesden, Hornsey, Tottenham, East Ham, Walthamstow, Hastings, Brighton, Bournemouth, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Bristol, Wolverhampton, Handsworth (Staffs.), Aston Manor, Derby, Wallasey, Dewsbury, York, or Cardiff, the proportion per cent. rose to 4·1 in Gateshead, 4·9 in Warrington, 5·5 in St. Helens, 5·6 in Barrow in Furness, and 5·8 in South Shields.

Inquests.

Inquests were held in England and Wales concerning 9,998, or 7·0 per cent., of the total deaths, the mean proportion in the ten preceding first quarters having been 6·6 per cent. In the 77 great towns the proportion of inquest cases averaged 7·7 per cent., ranging from 2·5 in Handsworth (Staffs.), 3·0 in Barrow in Furness, 3·1 in

Gateshead, and 3·2 in Aston Manor to 10·0 in Tottenham and in Walthamstow, 10·3 in Croydon, 11·0 in Devonport, and 12·4 in Derby.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 28,749, or 20·1 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding first quarters having been 17·6 per cent. In the 77 great towns the deaths in public institutions averaged 27·1 per cent. of the total deaths, the lowest percentages in the several towns being 4·0 in Rhondda, 10·7 in Devonport, 10·8 in Kings Norton, and 10·9 in Gateshead; the highest percentages were 28·5 in Leyton, 29·9 in Brighton, 30·5 in Manchester, 31·5 in Walthamstow, 35·7 in Liverpool, and 39·9 in London.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual rates of birth and death per 1000 living in these towns last quarter were as follows:—

	Birth-rate.	Death-rate.
Edinburgh	18·7	15·5
Glasgow	25·3	17·3
Dublin (Registration Area)	28·8	23·4
Belfast	28·6	17·3

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 30 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the 13 weeks ended 1st April, 1911 (Table XIII.). Excluding the Indian and Egyptian cities, the highest and lowest annual rates of birth and death during the first quarter of 1911 were as follows:—

BIRTH-RATES.

	Highest per 1000 living.		Lowest per 1000 living.
Trieste	31·5	Brussels	17·7
St. Petersburg	29·0	Paris	18·3
Cologne	28·9	Prague	19·6
New York	28·1	Antwerp	19·8
Breslau	26·5	Dresden	19·9
Budapest	26·3	Vienna	19·9
London ...		23·9	

DEATH-RATES.

—				Highest per 1000 living.	—				Lowest per 1000 living.
Trieste	28·5	Frankfort on Main	12·6
Moscow	27·7	Christiania	13·5
Venice	25·3	Stockholm	13·8
Rio de Janeiro	23·6	Antwerp	14·1
St. Petersburg	21·9	Amsterdam	14·5
Prague	21·4	Leipzig	14·6
				London	15·8

Small-pox caused 78 deaths in St. Petersburg, 54 in Moscow, 3 in Rio de Janeiro, 1 in Philadelphia and 1 in New Orleans.

The mortality from *enteric fever* was highest in Venice, New Orleans, St. Petersburg, Philadelphia, Paris, and Moscow; from *measles* in Trieste, Amsterdam, Moscow, Antwerp, and Philadelphia (in London the mortality from measles was, however, still higher); from *scarlet fever* in Moscow, St. Petersburg, Budapest, and Chicago; from *whooping-cough* in Christiania, Prague, Copenhagen, and Amsterdam (in London the mortality from whooping-cough was also excessive); and from *diphtheria* and *croup* in Moscow, Hamburg, Philadelphia, Cologne, and Chicago.

Infantile Mortality.—Among those European cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 79 in Amsterdam, 92 in Stockholm, 95 in Paris, and 98 in Frankfort on Main to 160 in Breslau, 168 in Munich, 197 in Prague, 216 in Trieste and 225 in Venice. In London the proportion was 108 per 1000 births.

INDIAN CITIES.—The death-rate was equal to 29·3 per 1000 in Calcutta, 38·2 in Madras, and 43·1 in Bombay. *Small-pox* caused 230 deaths in Madras, 166 in Bombay, and 15 in Calcutta; *measles* caused 475 deaths in Bombay, 91 in Madras, and 27 in Calcutta; *plague* caused 1,426 deaths in Bombay, 344 in Calcutta, and 1 in Madras; and *Asiatic cholera* caused 505 deaths in Calcutta, 54 in Bombay, and 17 in Madras.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the 13 weeks ended 1st April, 1911 (*see* pages xxvii—xxxii); and in the two following tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in **England and Wales** in the Years **1901-1911**, and in each Quarter of those Years.

YEAR - - -	1901	1902	1903	1904	1905	1906	1907	1908	1909	1910	1911

TABLE V.—77 Great Towns.—Population; Births, Deaths, and Meteorology in the 13 Weeks ended 1st April, 1911.

NOTE.—The 77 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-residents, and (2) by including the deaths of London residents occurring in the Metropolitan Outer Ring or in Metropolitan Public Institutions situated outside the County. (See also Table XII.) The deaths in the other towns have been corrected, as far as possible, (1) by the exclusion of all deaths of non-residents, and (2) by the inclusion of deaths of residents in certain outlying public institutions. With regard to the Outer Ring and its constituent areas, however, correction is more complete, a distribution of all transferable deaths occurring in any part of Greater London having been made.

TOWNS.	ESTIMATED POPULATION in the middle of 1911.	BIRTHS.	DEATHS.	Deaths of		Deaths from								Inquest Cases.			Deaths in Public Institutions.	Uncertified Causes of Death.	MEAN TEMPERATURE (Degrees Fahr.).	RAINFALL (Inches).	TOWNS.

* The values for Mean Temperature and Rainfall relate to the calendar quarter.

NOTE.—The 77 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The death-rate in London has been corrected as far as possible (1) by excluding deaths of all non-residents, and (2) by including the deaths of London residents occurring in the Metropolitan Outer Ring or in Metropolitan Public Institutions situated outside the County. (See also Table XII.) The death-rates in the other towns have been corrected, as far as possible, (1) by the exclusion of all deaths of non-residents, and (2) by the inclusion of deaths of residents in certain outlying public institutions. With regard to the Outer Ring and its constituent areas, however, correction is more complete, a distribution of all transferable deaths occurring in any part of Greater London having been made.

* Rate calculated upon the population at all ages

TABLE VII.—One hundred and thirty-six Smaller Towns.—Population; Births and Deaths in the QUARTER ended 31st March, 1911.

NOTE.—The 136 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected as far as possible, (1) by the exclusion of all deaths of non-residents, and (2) by the inclusion of deaths of residents in certain outlying institutions. With regard to towns in the Outer Ring, however, correction is more complete, a distribution of all transferable deaths occurring in any part of Greater London having been made.

* This table is supplied by the Medical Officer of Health of the Administrative County of London, and is compiled from returns which the London County Council receives from the Metropolitan Asylums Board under section 55 (4) of the Public Health (London) Act, 1891.

† Ophthalmia Neonatorum and Varicella became notifiable in the Administrative County of London on the 13th and 22nd of March respectively.

‡ Small-pox. Five of these notifications related to persons who were subsequently found not to be suffering from small-pox, viz.: one case in Paddington, two in Hackney, one in Stepney, and one in Camberwell.

TABLE X.—PROPORTION to POPULATION of CASES of INFECTIOUS DISEASE NOTIFIED in certain LARGE TOWNS of ENGLAND and WALES during the 13 Weeks ended 1st April, 1911.

* The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note.^b

^b For London the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar.

* The Registration Sub-districts (2009 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital; and L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

b See page 2, note b.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 31ST MARCH, 1911.

Changes in Registration boundaries are made by order of the Registrar-General, with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

1911.

1 Jan.—LAMBETH (25) : On this date Waterloo (1) and Lambeth Church (2) sub-districts were united and called Lambeth Church (1).

1 Feb.—THAKEHAM (83) : On this date Pulborough (1) and Washington (2) sub-districts were united and called Pulborough (1).

1 Jan.—On this date Cawthorne, High Hoyland, and Penistone sub-districts of WORTLEY Registration District (508) (comprising the Poor Law Union of Penistone) were created a new Registration District PENISTONE (508a) and WORTLEY Registration District was re-numbered (508b).

1 Jan.—PONTYPRIDD (589) : On this date Ystradyfodwg (4) sub-district was re-named Rhondda (4).

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING
THE QUARTER ENDED MARCH 31ST, 1911.

EXTRACTED FROM THE

MONTHLY WEATHER REPORTS

OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 222 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 57
STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

JANUARY, 1911.

Pressure, Winds and Weather.—The distribution of atmospheric pressure over the British Isles during the month was mainly anticyclonic. Throughout the period areas of high pressure were continually present, and always on the move in our immediate neighbourhood or about the western half of the Continent, occasionally eastward into Russia. Nearly all the areas of low pressure were, under these circumstances, kept at a considerable distance from our shores. In numerous instances the centres of depressions moved from the north-west quarter of the Atlantic across Iceland, or passed up between Iceland and Greenland, and disappeared over the Arctic Sea beyond the North Cape. In the night of the 5th the barometer fell below 28 in. in the north of Iceland, and rose above 31 in. at Moscow, remaining at this high level until the evening of the 7th. In the north of Iceland the barometer fell below 28·5 in. in the night of the 16th, and next morning it mounted to 30·9 in. over Bavaria. The mean results for the entire month show that the highest values, above 30·35 in. were southward of the English Channel, diminishing northward across these islands to less than 29·5 in. in the south-west of Iceland. At our home stations the figures ranged from 30·35 in. at Jersey, and 30·33 in. at Scilly to 30·08 in. at Wick and 30 in. at Sumburgh Head. Everywhere the values were well in excess of the average, by as much as 0·28 in. in Shetland, and 0·38 in. at Roche's Point. With these fairly uniform deviations the general distribution of pressure was very similar to the average, and consequently the type was distinctly South-Westerly to Westerly, with a fair representation of winds in other quarters as the various systems altered their positions. But although the barometer maintained an abnormally high level nearly all through the month, the differences of pressure were, as a rule, considerable, so that for the thirty-one days the mean gradient between the south of Ireland and north-west of Iceland amounted to as much as 0·85 in. This fact affords an explanation of the breezy character of the month. The returns from the telegraphic reporting stations show

that the 23rd was the only day on which the force of a strong wind was not exceeded in any part of the country, while on as many as twenty days the strength of a gale was registered at one or more stations.

A cyclonic system which was moving eastward along the Arctic Circle on the last day of December changed its direction on reaching the Norwegian coast, and during the first two days of the New Year passed across Norway and Denmark, and finally dispersed over the Low Countries. During this time a well-marked anticyclone, which at first was centred near our western coasts, moved round by the north of Scotland to Scandinavia, so that there was a decided gradient for Northerly and North-Easterly winds over these islands. Gale force extended as far south as Scilly, and on the 1st a strong gale (force 9) was attained at Sumburgh Head, a whole gale (force 10) at Spurn Head on the 2nd. The Aberdeen anemometer registered gusts at the rate of 60 miles an hour on the 1st. This polar current, however, was not productive of anything approaching severe winter weather, only slight night frost being experienced here and there, and the precipitation, which was small in quantity nearly everywhere, was mostly in the form of rain, a little snow or hail falling in places in the eastern half of England. On the morning of the 2nd a thunderstorm occurred at various eastern stations, between the Tyne and the Thames, severe at Norwich, accompanied by snow and hail. At the same time there was at Epsom "a remarkably brilliant display of sheet lightning. Many of the flashes were of such marked intensity, contrasted with the extreme blackness of the sky, that the surrounding country was clearly lit up."

From the exceptionally deep depression crossing Iceland in the night of the 5th to which reference has already been made, an elongated "V"-shaped secondary extended next morning southward from the Farøe down our western channels to the Bay of Biscay, and moved slowly eastward across Britain for the North Sea in the course of the day. At Stornoway the barometer dropped to 29.19 in., the lowest reading of the month in these islands. A Southerly gale blew in many parts of the kingdom, a strong South-Westerly gale at Malin Head, and a strong South-Easterly gale at Sumburgh Head. As the "V" advanced rain fell everywhere, in moderately large quantities in several neighbourhoods, nearly an inch at Bettws y-Coed and Colmonell, and 2.1 in. at Gruline (Mull). A few northern and western stations reported snow or hail showers.

From the 8th, when the country occupied the middle region between an anticyclone centred over Bavaria, barometer $30\frac{3}{4}$ in., and a deep depression northward of Iceland, barometer below 29 in., until the 13th, the distribution of pressure was continually undergoing important variations—the anticyclone sometimes on the Continent, at others over the sea to the south-westward. The main disturbance bore away beyond the Arctic Circle as it moved eastward, but secondary systems visited the British Isles. Small "V"-shaped irregularities of pressure crossed the southern districts on the 9th, and on the following day wireless reports from steamers indicated the existence of a large area of low pressure over the upper portion of the Atlantic. It was moving rapidly; by the morning of the 11th its centre had already reached the Moray Firth, and continuing on its easterly path it disappeared across Russia on the 13th. On the evening of the 11th it threw off a secondary system over the Irish Sea. By the morning of the 12th this secondary had reached the Straits of Dover, and had acquired considerable energy, its influence being felt over the whole of Western Europe. Afterwards it moved down across France to southern Spain, then eastward across the Western Mediterranean. The approach of the Atlantic depression was marked by a strong South-Westerly gale at Blacksod Point and Malin Head on the 10th. On the following days, with the lowest pressure to eastward or south-eastward, the wind was from Northerly directions, attaining the force of a strong gale on the 11th at Malin Head, Donaghadee, Roche's Point and Holyhead, a storm (force 11) at Scilly; a strong gale on the 12th at Holyhead, a whole gale at Malin Head, Newquay, Scilly and Spurn Head; and a strong gale on the 13th at Dungeness and Spurn Head. The anemometer registered a mean hourly velocity of 51 miles at Scilly, 52 at Dover and Holyhead, and 54 at Pendennis on the 12th, the highest velocities in squalls being at the rate of 66 miles per hour at Pendennis, 69 at Scilly, and 71 at Dover. Rain was general during this windy spell, and in some localities heavy. On the 10th, the largest amounts were in the west and south of Scotland and north-west of England, in several instances exceeding an inch, ranging up to 1.82 in. at Ford, 2.1 in. at Cruachan, both on Loch Awe, and 3.4 in. at Seathwaite. Next day the largest quantities fell in Kent, 1.1 in. at Kearsney, and 1.2 in. at Dover Water Works. In the north-east, between Durham and West Linton, thunderstorms were experienced on the 12th, and snow fell in many places, again in small quantities, the largest noted being a depth of 3 in. at Ardress Castle, Ross-shire.

With one or two unimportant exceptions the atmospheric pressure during the remainder of the month was continuously high, the barometer reaching 30·82 in. at Jersey and Newquay on the 18th, and 30·77 in. at Nottingham on the 31st. Nevertheless, high winds and gales were frequently reported—a strong South-Westerly gale at Sumburgh Head on the 15th and 24th, and at Malin Head on the 25th, a whole gale from South-West at Malin Head on the 26th and 28th, and from South at Blacksod Point on the 28th. At Pendennis, in the night of the 30th, the anemometer registered a mean hourly velocity of 53 miles, with gusts at the rate of 66 miles per hour. On the 24th, heavy rain fell in the west of Scotland, up to 1·5 in. at Cruachan, but, speaking generally, the period from about the 12th to the end was very dry, many localities having from 17 to 20 rainless days, many others only one or two trifling showers, or moisture in the form of fog or dew, during the same spell, the drought continuing far into February.

As a whole, the month was mild, the mean temperature exceeding the average in the northern and western districts, by as much as 3° at Kingussie and Strathpeffer. There was frost occasionally, but temperature rarely descended as low as 25°, although it fell to 16° at Balmoral on the 4th, and at West Linton on the 31st. Many afternoon maxima were up in the fifties, Killarney having a maximum of 59° on the 25th. High night minima were also common, up to 49° at Penzance on the morning of the 9th, and 51° at Colwyn Bay on the 26th.

Aurora was reported by various observers in Scotland on the 2nd–4th, 8th, 22nd–25th, 27th and 31st.

Fog was rather more prevalent than for some time past in the inland districts, Lincoln experiencing on the 19th the thickest fog for over 20 years. Sea fogs were very frequent, especially off the east coast, at times dense.

The coastal water was colder than in December, by as much as 5° at the Shipwash, the Goodwin and Eastbourne, and 6° on the Straits of Dover. At nearly all points the water was warmer than the air, by from 4° to 6° along the south coast.

Rainfall.—In all districts precipitation was below the average, the deficiency ranging up to 3·1 in. at Falmouth and Valencia, 3·5 in. at Roche's Point and 4·5 in. at Killarney. In numerous instances the month's totals were less than an inch, 0·5 in. at Hoylake, 0·4 in. at Kingstown, and 0·3 in. at Shrewsbury and Hawarden Bridge. Only in the more mountainous regions were there falls exceeding 6 in., up to 11·2 in. at Seathwaite, and 14·4 in. at Glenquoich (Inverness). Over a large area nearly the whole of the precipitation was received within the first 12 days, on only 6 days at several stations, 5 days at Colwyn Bay, 4 days at Hawarden Bridge. Some localities had more than 20 days, Glencarron 24, Stornoway 25, and Baltasound 28.

Bright Sunshine.—Most districts had an excess of sunshine, Cirencester being 19 hours to the good, and Cullompton 21 hours. On the other hand, Marlborough had a deficiency of 15 hours and Margate of 18 hours. The aggregate totals ranged from 11 hours (4 per cent. of the possible) at Bunhill Row, 14 hours at Fortrose, Ross-shire, and 16 hours at Manchester and Prestwich (7 per cent.) to 80 hours at Weymouth, and 81 hours at Bognor and Salcombe (31 per cent.)

FEBRUARY, 1911.

Pressure, Winds and Weather.—The month now under review was divided between two well-defined and nearly equal periods of widely different conditions of atmospheric pressure. An area of high barometer readings which had made its appearance over the United Kingdom, from the Atlantic, before the middle of January became the dominant feature in the situation over the western half of Europe, and for five weeks, down to the middle of February, it maintained its ascendancy without any very striking interruption. In January the central space of the system varied its position from day to day between these islands and the Continent, but during the first eight days of February it remained practically stationary over the British Isles, the barometer attaining its maximum height on the 1st, when it stood at 30·8 in. and upwards over the greater part of the country,

reaching 30·85 in. at Donaghadee, and 30·86 in. at Castlebay. A slight break in the distribution occurred on the 10th, occasioned by a disturbance which had for some days been in the neighbourhood of the Azores. On the evening of the 7th, it passed north-eastward between the islands, and arriving off the south-west of Ireland in the night of the 9th, it assumed a "V"-shaped formation and it moved eastward across England on the following day, finally dispersing over the North Sea on the morning of the 12th. This disturbance exercised but little influence on our weather, producing small quantities of rain, and not much wind. Immediately in the rear the anti-cyclonic conditions were resumed, but the highest pressure was now transferred to Eastern Europe, and by the 15th, when the barometer had passed above 30·5 in. in most parts of the British Isles, pressure had increased to nearly 31 in. in the south of Russia.

A marked change in the pressure distribution was now in course of development. On the 9th a series of deep cyclonic systems began to move eastward in the vicinity of Iceland. At first their centres passed up between Iceland and Greenland and on to the Arctic Sea, but after the 15th, the anti-cyclone receded across France, and the Peninsula, towards the Azores, and throughout the remainder of the month all the depressions which appeared on the upper region of the Atlantic progressed along paths to the eastward or north-eastward, between Scotland and Iceland, the areas of the successive systems embracing practically the whole of the British Isles. They were of considerable depth, the barometer frequently standing below 29 in. in the far north, on as many as eight days in Shetland, the lowest reading of the month in the British Isles, 28·29 in., being registered at Sumburgh Head on the 23rd. Owing to the steady persistency of high values in the earlier period the mean pressure for the whole month was in excess of the normal at all stations excepting Sumburgh Head, where there was a deficiency of 0·03 in. Elsewhere the excess ranged from 0·04 in. at Wick, and 0·06 in. at Nairn and Aberdeen to 0·23 in. at Roche's Point, and 0·24 in. at Jersey. The highest mean pressure, above 30·3 in., was over the Bay of Biscay and Western France, the lowest, below 29·5 in., over Western Iceland. At the home stations the values ranged from 30·29 in. at Jersey to 29·76 in. at Sumburgh Head, so that there was a mean Westerly to South-Westerly gradient of 0·53 in., against a normal of 0·26 in. Winds from between South and West prevailed in all districts, with a fair proportion at North-West or North in some localities.

Under the high-pressure system of the first half of the month, the weather conditions were of a very quiet character, the only instances of a wind force exceeding a strong breeze occurring at Jersey, Scilly, Malin Head, and Stornoway. The feature of the period was its dryness. Over an extensive region the weather was rainless, until the passage of the "V"-shaped disturbance of the 10th, already mentioned, but the precipitation on this occasion, although general, was everywhere unimportant. Down to the 20th or 22nd the dryness was maintained at a large number of stations, one or two very slight showers being recorded. This dry spell had commenced as far back as January 11th or 12th, no rain falling on 20 or more successive days at numerous places, 26 days at Bidston Observatory and Ruthin, 28 days at Mayfield, Staffs., and Newcastle, Wicklow, 29 days at Braceland and Worcester Lodge, Forest of Dean, Bath, Birmingham and Colwyn Bay, in nearly every instance ending on February 9th, while at Dursley, Gloucestershire, no rain was measured on any of the 37 days, January 12th to February 17th. Other places had only small aggregates, including dew and moisture deposited by fogs. Great Billing totalled 0·08 in. in 27 days Sandwich 0·17 in. in 35 days, and Tonbridge 0·19 in. in 41 days, January 13th to February 22nd. The temperature during this period of drought was as a rule moderate, but the opening days of February were severely cold throughout the country, the thermometer in the shade falling to 20° and below at a large number of stations on the 1st and 2nd, to 12° at Wokingham, 11° at Balmoral, and 10° at Garforth, and remaining below 35° in the afternoons, 31° at Wisley, Manchester and Glasgow, and 30° at Markree Castle and Ruthwell.

With the change in the distribution of pressure the conditions became very unsettled and stormy, the result being that on fourteen consecutive days, the 15th to the 28th, the force of a strong gale (force 9) was attained at one or more of the telegraphic reporting stations. A whole gale (force 10) was felt from South-West or West at Malin Head on the 15th and 16th; at Spurn Head on the 17th; at Malin Head on the 18th; Scilly on the 21st; Malin Head on the 22nd; Malin Head, Scilly and Spurn Head on the 23rd, with the deepest depression of the month, and a very steep pressure gradient of 1·3 in. between Shetland and Jersey; at Spurn Head on the 24th; and at Malin Head on the 28th. The anemometers registered gusts at the rate of 70 miles an hour at Aberdeen on the 17th; of 66 miles at Pendennis and Roche's Point, 67 miles at Llaneluad and Quilty, and 68 miles at Southport on the 23rd; and 72 miles at Southport on the 26th.

In the extreme north and west the dry weather came to an end on the appearance of a deep cyclonic system over Iceland in the night of the 12th, its South-Westerly wind bringing heavy rain to various parts of Scotland and Ireland. On the 13th Oban registered 1.2 in., Ford (Argyll) and Valencia Island 1.3 in., Glencarron 1.6 in., and Cruachan 1.8 in. This was the commencement of a very wet spell of eleven days in western Scotland. In the five days, 13th to the 17th, Glencarron registered a total of 6.1 in., and in the three days, 21st to 23rd, a further 3.5 in., Fort William receiving 4.5 in. in the same three days, while Cruachan received the very large amount of 11.1 in. in the twelve days, 12th to 23rd. The largest of the daily quantities were 1.6 in. at Rothesay, 1.7 at Glasgow and Poltalloch, 2 in. at Ford, 2.4 in. at Inverary, and 2.5 in. at Cruachan on the 17th; 1.7 at Cruachan and Fort William on the 21st; and 1.8 in. at the latter station on the 22nd. There were some large amounts in the north-west of England on the 14th, more than an inch at Darwen; on the 16th, over an inch at Burnley; on the 18th, 1.2 in. at Uldale, and 3.7 in. at Seathwaite (when, also, 1.3 in. fell at Glenarm, Antrim, and 1.4 in. at Seaforde Down); and on the 21st, up to 2.1 in. at Arncliffe. In the southern districts the only rainstorm of note occurred on the 27th, mainly in South Wales and the south-west of England, the records ranging up to 1.4 in. at Abersychan and Sheeps-ter, 1.6 in. at Pant-yr-Eos (Monmouthshire), and 1.9 in. at Arlington. Hail and snow showers were comparatively frequent, but they were unimportant. There were very few thunderstorms, about half the number reported being in the extreme north, between Caithness and Shetland. Mildness ruled during the disturbed period, many of the day maxima exceeding 55°, Torquay registering 60° on the 17th. High minima were also rather frequent, 50° at several stations on the mornings of the 18th and 28th, and 51° at Barnstaple on the 25th.

The mildness of the second half of the month more than balanced the cold of the first half, so that the mean temperature for the whole month was above the normal nearly everywhere, by more than 2° in several places, nearly 3° at Scarborough and Worksop.

Aurora was seen at various stations in Scotland on the 21st–25th, 27th and 28th, and at Aspatria on the 28th.

Fog was seldom reported inland, but on the western, southern and eastern coasts it was experienced at one or more places almost daily.

The temperature of the sea water round our coasts did not differ materially from what it had been during the preceding month, a little lower in some instances, but in nearly all neighbourhoods it was warmer than the air on shore, by 3° or 4° locally, by as much as 5° at Wick.

Rainfall.—As a rule there was a deficiency of precipitation over eastern, midland and southern England, the Channel and Southern Ireland, an excess in most other districts. At Glencarron there was an excess of 5.9 in. at Fort William, of 5.2 in., and at Poltalloch of 4.5 in., while the largest deficiencies were 1.3 in. at Cockle Park and Killarney, 1.4 in. at Jersey, and 1.5 in. at Roche's Point. In the mountainous regions of the west and north-west there were many very large aggregates, more than 10 in. at a number of stations, 13.2 in. at Cruachan, 14.1 in. at Ardnadam (Holy Loch), and 20.6 in. at Seathwaite. There were also numerous instances of less than an inch, down to about 0.6 in. at Whitby, Felixstowe, Sandwich and Newcastle-on-Tyne. The frequency ranged from 24 days at Stornoway, Gruline and Ford, and 22 days at Cruachan, Fort William, and Cromer to 9 days at Coventry, Tonbridge and in the Forest of Dean, 7 days at Dursley.

Bright Sunshine.—The duration of sunshine was rather variable. Strathpeffer 16 hours, and Scilly 15 hours, below the average, while Eastbourne, Tunbridge Wells and Totland Bay had 14 hours, and Westminster 20 hours, above the average. The total duration ranged from 94 hours at Dover, and 93 hours at Hastings (34 per cent. of the possible), and 91 hours (33 per cent.) at Bournemouth and Jersey to 27 hours (10 per cent.) at Manchester.

MARCH, 1911.

Pressure, Winds and Weather.—The distribution of atmospheric pressure during the month now under review was very variable. Within the region under observation there were numerous disturbances and several high pressure systems, but in nearly all instances the centres kept well outside the British Isles. During the first twelve days an anticyclone of varying intensity extended from our south-western coasts and the Bay of Biscay down to and beyond the Azores. The main depressions of this period were all in the far north, the majority of them keeping on north-easterly courses across Iceland or between Iceland and Greenland. A large depression which appeared far out on the Atlantic in the direction of southern Greenland on the morning of the 1st followed, however, a course well to the southward of Iceland, and travelling at a rapid rate to the northward of Shetland, it crossed the southern parts of Norway and Sweden, and dispersed over the interior of Russia on the morning of the 3rd. Another disturbance, appearing between Iceland and Greenland in the night of the 9th, moved slowly on a south-easterly course, dispersing over southern Norway on the morning of the 13th. Over the United Kingdom the weather of these twelve days was influenced more by a series of "V"-shaped depressions, secondaries formed near the southern limits of the far northern disturbances. One of these "Vs" appeared on the morning of the 3rd, out on the Atlantic, in about 49° N., 26° W. It moved across Ireland and England and disappeared over the North Sea in the night of the 4th. Another formed in about 54° N., 13° W., on the evening of the 5th, and dispersed next day over England. A third was developed in St. George's Channel on the evening of the 8th, crossed England and the North Sea, and died out on the Baltic. A fourth appeared on the morning of the 10th in 54° N., 18° W., advanced to our western districts, and by next morning had developed a distinct cyclonic centre over Brittany, where it dispersed in the course of the day. A fifth made its appearance on the morning of the 11th in 52° N., 25° W. By the evening of the following day it had formed a separate centre immediately to the north of Scilly. Moving eastward along the south coast of England, it deepened quickly, the barometer falling to 29 ins. over Belgium on the morning of the 13th. Subsequently the system made slow and erratic progress, passing to the mouth of the Elbe, crossing the North Sea to the coast of Norfolk, then down to the north-east of France, where it dispersed on the 16th.

After the 12th the general distribution of pressure underwent considerable modification—in fact there was a complete reversal of the conditions. For the rest of the month anticyclones frequented the northern half of our area—about Iceland, Scandinavia, Denmark and the Baltic, and from the 25th to the 31st near Scotland and the Hebrides. Depressions were now found where during the earlier portion of the month areas of high pressure were in the ascendant. Every day from the 12th to the 31st the barometer was relatively low between our south-western coasts and the Azores, the centres of some of the systems passing down almost to the latitude of Madeira. The most important of these disturbances appeared over mid-ocean on the 50th parallel in the night of the 14th, moving due eastward as far as the 15th meridian by the evening of the 16th. Its progress was then arrested, and until the 24th it wandered about irregularly beyond our south-western coasts and on the Bay of Biscay, finally dispersing without reaching the mainland. An unusual track was followed by a depression which formed over Algeria on the 20th. It passed across Tunis and Scilly, then curved northward and north-westward through Italy and eastern France to the English Channel by the 27th, and during the next two days it moved westward along the 50th parallel as far as the 17th meridian, where it dispersed.

Under these circumstances the mean distribution of pressure over these islands for the whole month bears no resemblance to the conditions at any particular period. The mean highest pressure, slightly above 30 ins., was outside our north-western coasts, and the lowest, a little below 29.9 ins., between the Thames Estuary and Rhineland, but the extreme values ranged from 30.22 ins. at the Azores to below 29.8 ins. northward of Iceland and across to northern Scandinavia. The greatest range of pressure at our home stations was in the extreme north and along the Channel and south-east coasts, where it exceeded an inch, 1.5 in. at Sumburgh Head, and 1.2 in. from Scilly to Dover, between these it diminished to about $\frac{1}{2}$ in. at Birr Castle and Liverpool. The highest reading in the south, 30.57 in., occurred at Jersey on the 3rd; and in the north, 30.58 ins. at Stornoway on the 25th. Sumburgh

Head had the lowest value in the north, 29·01 ins. on the 1st; Dungeness the lowest in the south, 29·16 ins. on the 13th. The mean results were below the normal in the south, by 0·07 in. at Dungeness, above elsewhere by as much as 0·18 in. at Sumburgh Head, and 0·23 in. at Stornoway. The distribution of mean pressure thus differed widely from what is usual at this season, so that there was a great preponderance of Polar winds—North-Westerly to Northerly in the earlier days, afterwards Northerly to Easterly.

Taken as a whole the month was rather windy, the force of a gale being reached at one or more of the telegraphic reporting stations on 20 days. A strong South-Westerly gale was felt at Malin Head and Sumburgh Head on the 1st; North-Westerly at Scilly, on the 5th and 6th; South-Westerly on the 11th, and Northerly on the 13th; a whole Northerly gale at Malin Head on the 13th, and at Spurn Head on the 14th and 15th; a strong Easterly gale at Scilly on the 18th, and at Spurn Head on the 19th; North-Easterly at Yarmouth on the 25th, Yarmouth and Nottingham on the 26th, Dungeness on the 27th; and a whole Northerly gale at Dungeness on the 26th. The anemometrical records disclose a few instances of gusts in which the velocity was at the rate of 60 or more miles per hour, up to 64 miles at Dover on the 26th. There were several shipping casualties about the southern and eastern coasts during the North-Easterly gale of the 25th and 26th and the cross Channel services were delayed considerably.

Although the unsettled and windy type of conditions was general the weather itself presented varied features. Rain was much more frequent in the south and east than in the north and west, unusual dryness prevailing in the latter districts after the 12th. In many neighbourhoods this period was not an absolute drought owing to the occurrence of one or two trifling showers, but Glenarm (Antrim), Blacksod Point, Kinlochewe, and Loch Awe had 16 consecutive rainless days, Oban 17 days, Gruline (Mull) 18 days, and Cargen (Dumfries) 24 days, the drought continuing well into April. There were very few records of as much as an inch of rain on any day during the month:—On the 1st an inch at Glencarron, 1·7 in. at Arncliffe, and 2·4 ins. at Seathwaite; on the 10th an inch at Haverfordwest and Plymouth, 1·2 in. at Whitechurch, 1·3 in. on Loch Torridon, and 1·5 in. at Sheepstor; and on the 12th, when heavy rain was general in the south, an inch at Brighton, Portland Bill, Rousdon and Sheepstor, 1·1 in. at Ventnor, and 1·2 in. at Eastbourne. Snow was experienced on several days, the greatest depth noted being 4½ ins. at Heathfield (Sussex) on the 12th, 4 ins. at Mareham-le-Fen (Lincs.) on the 14th, and 6 ins. at Heathfield in the night of the 25th. Thunderstorms occurred on the 13th in various parts of England, causing some structural damage at Rothamsted. A thunderstorm visited many of the southern counties on the 22nd.

The keen North-Easterly winds gave an impression of great cold, but the temperature of the air preserved a fairly uniform level about or rather above the normal during the greater part of the month. Afternoon maxima of 60° and upwards were uncommon, 62° on the 21st at Epsom, Greenwich and Margate, and on the 22nd at Camden Square and Guernsey, 63° at Tottenham on the 22nd, and at Arlington on the 30th. As a rule the frosts of the month were slight, the shaded thermometer descending to 24° at a few stations on various dates, to 23° at Cromer on the 26th, and to 22° at Llangammarch Wells on the 17th, Balmoral on the 21st and 29th, Fort Augustus on the 22nd, and Markree Castle on the 26th.

Aurora was reported at Nairn on the 1st, Baltasound on the 5th, Stornoway on the 20th, Deerness on the 23rd and Nairn on the 29th.

Fog was a rare visitor through the greater part of the month, but on the morning of the 29th the atmosphere became very foggy over an extensive area, embracing a considerable portion of England, the neighbouring parts of the Continent, and the adjacent seas, from the Bay of Biscay to Norway. The fog lasted five days, to April 2nd, and was very dense at times, especially at sea, so that shipping movements were greatly delayed, and there were some casualties.

Compared with February the temperature of the sea water round our coasts showed scarcely any change, but off Margate and Usan (Montrose) it was 3°, and off Eastbourne 4° warmer. At nearly all points the water was warmer than the air on shore, by as much as 3° locally in the west and north.

Rainfall.—There was an excess of precipitation over the south-eastern quarter of England and in the Channel Islands, Hillington returning more than double the usual amount. Over the rest of the kingdom there was a deficiency, which was more and more marked in the north-west and north, and amounted in western Scotland to 2·38 ins. (62 per cent.) and in northern Scotland 1·39 in. (31 per cent.). Few of the aggregates for the month exceeded 4 ins., even at Seathwaite the fall

was only 6·2 ins., a loss of 4·5 ins. The smallest totals were 0·9 in. (41 per cent.) at Malin Head, 0·9 in. at Edinburgh and Cargen, and 0·6 in. (44 per cent.) at Hawarden Bridge. The frequency was irregular, the falls being very small in most cases. Roche's Point and Caragh Lake returned 27 rain days, Cahir, Sheepstor and Cromer 25, against 8 at Cally and Colwyn Bay, and 4 at Cargen.

Bright Sunshine.—The distribution of insolation presented most unusual features, the smallest records being in the Thames Watershed, increasing westward and northward to the highest values in western Scotland and the neighbouring islands. The duration was below the average at Cullompton, 39 hours, at Kew 35 hours, at Torquay 33 hours, at Oxford 32 hours, and at Margate 31 hours, while it was above the average at Fort Augustus 39 and Stornoway 69 hours. Oban totalled 192 hours (53 per cent. of the possible), Castlebay 179 hours (49 per cent.), and Stornoway 172 hours (48 per cent.), against Westminster 60 hours and Plumstead 58 hours (16 per cent.), and Bunhill Row 52 hours (14 per cent.).

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared in the Meteorological Office under the direction of
W. N. Shaw, LL.D., Sc.D., F.R.S.

In compiling the following Tables (pp. 82 to 91) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South-East; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		4. ENGLAND, E.:—	
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Cromer ..	W. H. Archer, for Urban District Council.
Hampstead ..	E. L. Hawke, for the Hampstead Scientific Society.	Hillington ..	Rev. H. E. B. Folkes, M.A.
Camden Square	H. Robert Mill, LL.D., D.Sc.	Norwich (Eaton) ..	A. W. Preston.
Westminster ..	The Meteorological Office.	Cambridge ..	R. Irwin Lynch, M.A. The Botanic Gardens.
Greenwich ..	The Royal Observatory.	Clacton-on-Sea	A. W. Shadick, for Urban District Council.
Norwood ..	W. Marriott.	Bennington ..	Rev. J. D. Parker, LL.D.
Kew ..	Meteorological Office Central Observatory.	Berkhamsted ..	E. Mawley.
2. ENGLAND, CENTRAL:—		5. ENGLAND, N.E.:—	
Huddersfield	J. Firth.	Cockle Park .. (near Morpeth).	T. E. W. Dobson, for the Northumberland County Council.
Wakefield ..	A. French, M.R.C.S., L.R.C.P.	North Shields	The Meteorological Office.
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.	Durham ..	F. C. H. Carpenter.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	York ..	Oxley Grabham, M.A., for Yorkshire Phil. Soc.
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobbyer, M.D., M.O.H., for the Corporation.	Spurn Head ..	The Meteorological Office.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Lincoln ..	W. Barr, for the Corporation.
Oxford ..	The Radcliffe Observatory.	Hull ..	H. B. Witty, for the Corporation.
Bath ..	W. H. Symons, M.D., M.O.H., for the Corporation.	6. ENGLAND, N.W., WITH NORTH WALES:—	
Shrewsbury ..	Capt. O. S. Reid, R.E.	Southport ..	J. Baxendell, for the Corporation.
Sheffield ..	E. Howarth. The Weston Park Museum.	Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.
Buxton ..	W. Pilkington.	Aspatria ..	J. Smith Hill, B.A. B.Sc., J.P. The Agricultural College.
Wistanstow ..	Rev. W. La Touche, B.A.	Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.
Cheltenham ..	A. C. Saxby, for the Corporation.	Liverpool .. (Bidston.)	W. E. Plummer, M.A. Bidston Observatory.
3. ENGLAND, S.E.:—		Llandudno ..	W. Little, for the Town Council.
Salisbury ..	Thos. Challis, for the Earl of Pembroke.	Bettws-y-coed	Dr. H. W. Fox, for District Council.
Brighton ..	D. Forbes, M.D., M.O.H., for the Corporation.		
Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corporation.		
Eastbourne ..	S. R. Henderson, for the Corporation.		
Southampton ..	A. Vaughan, for Director General of Ordnance Survey.		
Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.		

Station.	Observer.	Station.	Observer
7. ENGLAND, S.W., WITH SOUTH WALES:—		8. THE CHANNEL:—	
Llangammarch Wells.	W. Black Jones, M.D.	Scilly	The Meteorological Office.
St. Ann's Head, Pembroke.	The Meteorological Office.	Jersey	The Meteorological Office.
Bristol	D. Rintoul, M.A., Clifton College.	Guernsey ..	Adolphus Collenette.
Portland Bill..	The Meteorological Office.		
Plymouth ..	H. Victor Prigg, A.M.I.C.E., for the Corporation		
Falmouth ..	The Meteorological Office.		
Woolacombe ..	R. N. Kivell.		

METEOROLOGICAL SUMMARY FOR THE FIRST QUARTER OF THE YEAR 1911.
13* WEEKS TO APRIL 1st, 1911.

* The Summary for "London" is for three calendar months. The "difference from average" is computed from the data for Camden Square, Norwood, and Kew, the average used being that for the 35 years 1871-1905. (Sunshine, 25 years 1881-1905, at Westminster and Kew.) A comparison with the averages for 65 years 1841-1905 for the Royal Observatory, Greenwich, is given in the following tables.

For corresponding values for the years since 1878, see Appendix I. to the Weekly Weather Report of the Meteorological Office, 1908.

NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—The hours of observation are indicated by the type in which the names of stations are printed. Clarendon, normal climatological stations, 9 a.m. and 9 p.m.; **BLACK CAPITALS**, telegraphic reporting, normal climatological stations, 7 a.m., 1 p.m., 9 p.m.; Roman, telegraphic reporting stations, 7 a.m., 6 p.m.; *Italics*, auxiliary climatological stations, 9 a.m. only (Ventnor 9 a.m. and 3 p.m.). At stations marked * an additional observation is taken, at 3 p.m. in the case of stations printed in clarendon type, and at 1 p.m. in the case of stations printed in Roman type. These additional observations are used in preparing the wind summaries, and in computing the number of days of overcast or clear sky. At telegraphic reporting stations (black capitals or Roman type), the results given under "hygrometer" and "cloud" are based on the morning observations only. At Lincoln the hygrometrical results are based on the 9 a.m. observations only.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 9 a.m. only, or 9 a.m. and 9 p.m., or 7 a.m., 1 p.m., 9 p.m., or 7 a.m. and 6 p.m., as the case may be.

Hygrometer.—At certain stations the vapour pressure and relative humidity are the results obtained from the daily values. These are entered in italic type. At other stations the calculations are made from the monthly means of the dry and wet bulb readings.

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the mean of the estimates of the "amount of cloud" at the fixed hours of observation is less than 2, and as an "overcast" day if the mean is greater than 8.

Time. and 10).	Rain and other forms of Precipitation.				Weather, Number of days of								Wind. No. of observations reduced to a total of 93 (Feb. 84) for the month.

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours (see above). At Falmouth, Kew and Stonyhurst the wind observations are based on the records of a standard Robinson anemometer (factor 2.2). (At Plymouth and Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer.) Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales.

Averages.—The averages used are—Temperature and Rainfall for the 35 years 1871-1905; Bright Sunshine for the 25 years 1881-1905. The values are published in Appendix III. to the Weekly Weather Report of the Meteorological Office for 1906.

Royal Observatory, Greenwich.—The averages for Temperature and Rainfall, with which the current values are compared, are for the 65 years 1841-1905. The averages for sunshine are for the period 1897-1906. The earth temperatures are taken at a depth of 3 ft. 2 ins. The daily rainfall amounts are those for the 24 hours comprising the civil day. The numbers of days in each month of the quarter which were persistently overcast from midnight to midnight were 6, 1, 3, the number of persistently cloudless days were 0, 0, 0, the number of persistently foggy days were 0, 0, 0.

Mean Values for Districts.—The monthly mean values for districts for temperature, rainfall and sunshine are computed from the data for those stations which are included in the Weekly Weather Report of the Meteorological Office. The selection of stations is not identical with that included in this Report. The district values, as quoted, are comparable with the statistics published in previous issues of the Weekly Weather Report of which a Summary is in course of preparation. The averages with which the current district values are compared are for the 25 years 1881-1905. The district values for amount of cloud and earth temperatures are taken from the Monthly Weather Report of the Meteorological Office.

INDEX OF URBAN DISTRICTS.

As existing on 31st March, 1911, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked + have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of the last Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,163 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 154 were each co-extensive, at the end of December, 1910, with one or more Registration Areas.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS
DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 250.] **Marriages**—January, February, March, 1911. [Price 9d.
 Births and Deaths—April, May, June, 1911.

NOTE.—The figures in this publication are tabulated mainly from statistical Returns furnished by the local Registrars, and for this reason may not be found to correspond exactly with the authoritative figures for the whole year to be published later in the Annual Report.

*General Register Office, Somerset House,
26th July, 1911.*

Throughout this Return revised estimates of populations based upon the numbers enumerated in 1901 and 1911 have been substituted for the estimates shown in the Return for the first quarter of the year, which were based upon the numbers enumerated in 1891 and 1901, and all rates relating to periods before the 1st April, 1911, have been recalculated on revised estimates of population. The birth-rates and the death-rates from all causes and from the principal epidemic diseases in England and Wales as a whole, in the 77 great towns, in the 136 smaller towns and in the remainder of England and Wales, shown in the following table, should be substituted for those shown on page xiv of the Quarterly Return for the three months ended 31st December, 1910, and on page ix of the Annual Summary for 1910.

Birth-rate, Death-rate, and Analysis of Mortality during the year 1910.

	ANNUAL RATE PER 1000 LIVING.										
	Birth-rate.	Death-rate.		Principal Epidemic Diseases Cols. 5-11.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping cough.	Enteric Fever.	Diarrhoea.
		Crude.	Cor-rected.*								
Cols.	1.	2.	3.	4.	5.	6.	7.	8.	9.	10.	11.

England and Wales less the 213 Towns.	24·1	13·1	12·3	0·70	0·00	0·15	0·05	0·11	0·16	0·04	0·19

* The Corrected Death-rates represent the Crude Death-rates in Col. 2 multiplied by the respective Factors for Correction for differences of sex and age constitution of population as in 1901. For construction and use of these Factors see Annual Summary 1908, pp. x-xiii. Owing to the difficulty of distributing to their proper areas deaths occurring in public institutions it is probable that the death-rate of the rural area is somewhat overstated, and those of the great and smaller towns slightly understated.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1911 is estimated at 45,309,021 persons; that of England and Wales at 36,168,750, that of Scotland at 4,766,860, and that of Ireland at 4,373,411. These estimates are based upon the numbers enumerated at the Censuses of 1901 and 1911.

In the United Kingdom 285,570 *births* and 156,703 *deaths* were registered in the three months ended 30th June 1911. The natural increase of population was, therefore, 128,867. The number of *persons married* in the quarter ended 31st March 1911 was 117,490.

The birth-rate in the United Kingdom in the *second* quarter of 1911 was 25·3, and the death-rate 13·9, per 1000 of the estimated population. The marriage-rate in the *first* quarter of 1911 was 10·5 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to a Return of the passenger movement between the United Kingdom and places out of Europe issued by the Board of Trade it appears that in the three months ended 30th June 1911 of the passengers stated to be of British nationality the departures exceeded the arrivals by 75,354 persons, an increase of 6·4 per cent. as compared with the corresponding period of the previous year. English passengers leaving exceeded those arriving by 49,685, Welsh by 1,163, Scottish by 24,680 and Irish by 9,646, while of British Colonial passengers the arrivals exceeded the departures by 9,820. Of aliens those arriving exceeded those leaving by 3,975, the balance in the corresponding period of the previous year having been 18,466 in the opposite direction.

The passenger movement between the United Kingdom and the Continent of Europe showed, according to figures supplied by the Board of Trade, a balance inward of 45,797 persons in the second quarter of the year. A Return issued by the Home Office shows that the excess of aliens arriving from the Continent over those departing for the Continent in the second quarter was 19,480.

Thus the balance of the aggregate passenger movement in the quarter to and from all Countries was 6,102 outward.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,008 registration sub-districts of England and Wales in the three months ended 30th June 1911; and the MARRIAGES in 15,831 churches or chapels, in 15,840 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, in the three months ended 31st March 1911.

Marriages.

In the *first* quarter of 1911 the marriages of 89,506 persons were registered, being equal to an annual rate of 10·0 persons married per 1000 of the estimated population, against an average rate of 11·4 per 1000 in the first quarter of the ten years 1901-1910.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 7·2 in Buckinghamshire, 7·3 in Oxfordshire, 8·0 in Middlesex, in Essex and in Wiltshire, and 8·1 in

Surrey and in Herefordshire; the highest rates were 11.1 in Carmarthenshire, 11.2 in Cumberland, 11.5 in London, in Cornwall, in Durham and in Monmouthshire, 11.7 in Glamorganshire, and 11.8 in Northumberland.

Births.

The births registered in the *second* quarter of 1911 numbered 225,777, and were in the proportion of 25.0 annually per 1000 of the population; this is 3.0 per 1000 below the mean birth-rate in the ten preceding second quarters, and is the lowest birth-rate recorded in any second quarter since the establishment of civil registration. In registration counties with populations exceeding 100,000 the lowest birth-rates during the quarter were 18.6 in Sussex, 19.9 in Somersetshire, 20.2 in Berkshire, 20.4 in Cornwall, and 20.6 in Hertfordshire and in Devonshire; the highest rates were 28.3 in the North Riding of Yorkshire, 28.6 in Northumberland, 28.8 in Staffordshire, 28.9 in Carmarthenshire, 29.3 in Nottinghamshire, 29.8 in Monmouthshire, 31.3 in Glamorganshire, and 32.9 in Durham.

In the 77 great towns the birth-rate averaged 26.1 per 1000, ranging from 15.3 in Hastings, 15.6 in Bournemouth, 17.6 in Hornsey, 19.3 in Bradford, 19.4 in Halifax, and 19.7 in Brighton to 32.0 in West Hartlepool, 32.4 in Gateshead, 32.5 in St. Helens, 32.6 in Middlesbrough, 32.8 in Sunderland, 34.3 in Merthyr Tydfil, and 35.8 in Rhondda. In the 136 smaller towns the mean birth-rate was 24.0 per 1000, and in the remainder of England and Wales, excluding the 213 chief towns, it was 24.2.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 105,793, against 122,782, 111,987, and 119,161 in the second quarters of 1908, 1909, and 1910, respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 31s. 10d., 30s. 5d., and 30s. 4d., respectively, in the preceding three quarters, was 31s. 5d. last quarter. The average wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4½d.; of prime beef, 7¾d.; of inferior mutton, 4½d.; of prime mutton, 8½d. Compared with the average prices in the preceding three months, the price of inferior beef showed an increase of ½d., and that of prime beef an increase of ¾d. The price of inferior mutton showed a decrease of ½d., and that of prime mutton a decrease of ¼d. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 15s. 9d. per ton, against 16s. 11d. per ton in the second quarter of 1910. The average price of Consols was 80l. 19s. 3d., having been 80l. 7s. 1d. in the preceding quarter. The minimum annual rate per cent. of discount charged by the Bank of England which had been reduced from 3l. 10s. to 3l. on the 9th March remained at 3l. during the quarter ended 30th June.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 647,066 exclusive of lunatics in county and borough asylums, registered hospitals and licensed houses, of casual paupers, of persons receiving out-door medical relief only, and of patients in the fever and small-pox hospitals of the Metropolitan Asylum District. Of these 647,066 persons, 264,262 received in-door, and 382,804 out-door, relief. The proportion of the population in receipt of poor-law relief was 17.9 per 1000,

against 22·6 and 21·9 per 1000 respectively in the second quarters of 1909 and 1910.*

Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom, together with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 71-91.

The quarter was upon the whole fair and warm, with long periods of dry weather in the early part of April and the second half of May, the latter drought continuing in many places throughout the early days of June. In the second week of May and towards the close of the same month severe thunderstorms were experienced in many districts, and in the fourth week of June extremely heavy falls of rain were experienced over the northern and eastern portions of Great Britain.

April opened with rather more than a week of cold North and North-East winds (reaching the force of a gale on our southern and eastern coasts), the mid-day temperatures recorded in the south of England on the 5th and 6th being in some places the lowest ever observed at so advanced a period in the season. Heavy showers of snow or sleet were experienced at about the same time in the eastern and southern parts of Great Britain; in the western districts the weather was fair and less cold. After the 11th an anti-cyclone spread down from the north-westward, and fine weather set in generally, with high day temperatures, but a continuance of frosty nights. Between the 17th and 19th the conditions were influenced by a cyclonic disturbance which extended slowly from the Atlantic, causing rain in all districts, with a gale from between South and West over a considerable portion of England and Ireland. In the closing part of the month fresh to strong Westerly and South-Westerly winds prevailed, with mild showery weather, and a heavy fall of rain in the west of Scotland on the 21st.

Similar conditions prevailed throughout the opening days of May, a gale being experienced on the English and Irish coasts between the 1st and 3rd, with heavy rain in the western parts of Ireland and Scotland. After the 4th a brief improvement took place, but between the 10th and 16th very unsettled conditions were occasioned by a complex barometric depression which extended over the United Kingdom from the southward; thunderstorms, accompanied in many instances by heavy falls of rain, commencing in the south-west of England on the 10th, and afterwards extending over nearly the whole country. For the remainder of May the weather was mostly fair, warm, and dry, but thunderstorms of considerable severity occurred in many districts between the 25th and 27th, and again on the 31st. Between the 29th and 31st the thermometer rose to 80° and upwards in many parts of the United Kingdom, and reached 83° at Balmoral and Fort William.

The early part of June was mostly fine and warm, but thunderstorms occurred in the south-western districts on the 8th, accompanied by very heavy rain in the Channel Islands. After a spell of cool Northerly winds between the 12th and 14th, when ground frosts of destructive severity were experienced in many parts of the country, the weather became very changeable generally, the wind being mainly from the West or South-West, and often strong in force.

* The large reduction as compared with previous years is mainly due to the discontinuance after the 31st December, 1910, of the disqualification for old age pensions ensuing on the receipt of Poor Law Relief at any time since 1st January, 1908.

Heavy rain fell in the west of Scotland on the 21st; and on the 23rd and 24th, when the centre of a deep barometrical depression passed northward from the south-east of England to the Norwegian coasts, a still heavier fall was experienced over the eastern half of Great Britain, the downpour being especially severe in Northumberland and Berwickshire. In the latter half of June the thermometer was mostly below its normal level.

For the quarter as a whole the *mean temperature* was above the average, the excess being greatest (one and a half to two degrees) in London and England East and Central, and least (only half a degree) in England South-East and the English Channel. The highest readings were observed at various times during the first week in June, when the thermometer exceeded 80° in most parts of the country, the readings on the 5th being as high as 88° at Camden Square, and 85° at East Ham, Barnet, and Norwood. The lowest temperatures occurred early in April, mostly on the 5th or 6th, when the sheltered thermometer fell to 25° or less in nearly all districts, to 20° at Colmonell and Thorntonhall, and to 17° at West Linton. On the surface of the grass a reading of 15° was reported at Dumfries and Llangammarch Wells, and a reading of 14° at Armagh and Markree Castle, Co. Sligo.

In the London district the *rainfall* of the quarter agreed very closely with the average, but over the country generally it was below the average, the greatest deficiency (30 per cent.) occurring in England Central. In England North-East and North-West, owing mainly to the heavy downpour of June 23rd and 24th, the aggregate was a little in excess of the average. The heaviest individual falls occurred respectively over the northern parts of England and Ireland between May 14th and 17th, over the English Midlands between May 25th and 27th, in the neighbourhood of the North Downs on May 31st, and over the north of England and the neighbouring parts of Scotland on June 23rd and 24th. At Epsom, during the thunderstorm of May 31st, nearly two and a half inches fell in the space of 50 minutes, and on the same day more than three and a half inches fell at Banstead. On June 23rd or 24th between two and three inches were measured at several stations in the north of England, the fall at Whitby lasting continuously for 55 hours and yielding 3·7 ins. of water in the gauge. In all districts the number of rain days experienced was below the average.

The duration of *bright sunshine* was everywhere in excess of the average, but in England Central, England North-East and the English Channel, the difference was small. An unusually brilliant spell of weather occurred during the fortnight ending with June 10th. In each week many districts reported more than 70 per cent. of the possible amount of bright sunshine, and in England North-West the proportion for the entire fortnight was as high as 76 per cent.

Deaths.

The deaths registered in England and Wales last quarter numbered 119,984, and were in the proportion of 13·3 annually per 1000 persons living; this rate is 1·3 per 1000 below the mean rate in the ten preceding second quarters. In registration counties with populations exceeding 100,000, the death-rates ranged from 10·1 in Middlesex, 10·4 in Essex, 10·5 in Buckinghamshire, 11·0 in Hertfordshire, 11·1 in Northamptonshire, 11·2 in Berkshire, and 11·3 in Surrey, to 15·0 in Herefordshire, in Durham, and in Northumberland, 15·1 in Lancashire, 15·2 in Cumberland, 16·0 in Denbighshire, 16·2 in Carnarvonshire, and 16·3 in the North Riding of Yorkshire.

The 119,984 registered deaths included 62,448 of males and 57,536 of females, the death-rate among males being 14·3, and that among females 12·4 per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding second quarters, the death-rate of males showed a decrease of 1·5, and that of females a decrease of 1·2. Out of equal numbers living, the deaths of males were to those of females as 116 is to 100; and was equal to the mean proportion in the second quarters of the ten preceding years.

Urban and Rural Mortality.

In the 77 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1911 is estimated at more than sixteen millions, the death-rate calculated without reference to age and sex constitution of the populations was 13·8 per 1000 living; the rates in the three preceding second quarters in the great towns having been 14·3, 14·6, and 13·3. The crude rates in the several towns ranged from 8·7 in Reading, 9·1 in Hornsey, 9·6 in Kings Norton, 9·7 in East Ham and in Handsworth (Staffs.), and 9·8 in Leyton to 16·1 in South Shields and in Tynemouth, 16·3 in Sunderland, 16·6 in Newcastle on Tyne, 16·9 in Stoke on Trent, 18·3 in Liverpool, and 19·4 in Middlesbrough.

In the 136 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at five millions in 1911, the crude death-rate was 12·4 per 1000 living; the rates in the three preceding second quarters in the group of smaller towns having been 13·0, 13·3, and 11·9.

In the remainder of England and Wales, with an aggregate population estimated at fifteen millions, of whom seven millions live in small towns and eight millions in rural districts, the crude death-rate was 13·1 per 1000 living; the rates in the three preceding second quarters having been 13·6, 14·0, and 12·9.

Crude death-rates, that is the proportions of deaths recorded to the estimated populations amongst which they occur, regardless of age and sex, are a fairly trustworthy test of relative mortality when the rates for short periods in the same area are compared; but when one area is compared with another, crude death-rates should be supplemented by rates in which the age and sex constitution of the respective populations is taken into account. The following statement shows the crude and corrected death-rates in each of the above areas. (See also Table III., page xv.)

Second Quarter, 1911.

	Crude Death-rates.	Corrected Death-rates.
England and Wales	13·3	13·3
77 Great Towns	13·8	14·7
136 Smaller Towns	12·4	13·0
England and Wales, less the 213 Towns	13·1	12·3

It should moreover be stated that owing to the difficulty of distributing to their proper areas the deaths occurring in public institutions the death-rate in the rural area is probably somewhat overstated.

Watering Places and Summer Resorts.

The deaths registered last quarter from all causes, and from each of the more important epidemic diseases, in those urban districts which are most nearly co-terminus with our chief watering places, are shown in Table XIII. For purposes of comparison the populations at the recent census are also shown.

Mortality at Different Ages.

Of the 119,984 deaths registered in England and Wales last quarter, 20,593 were those of infants under one year of age, 63,533 those of persons aged between one year and sixty-five years, and 35,858 those of persons aged sixty-five years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 91 per 1000; this proportion was 15 per 1000 below the average in the ten preceding second quarters and was equal to that recorded during the corresponding quarter of last year which was the lowest rate recorded in any quarter since the establishment of civil registration. Among registration counties with populations exceeding 100,000, the lowest proportions were 51 in Buckinghamshire, 57 in Oxfordshire, 59 in Berkshire and 62 in Hertfordshire and in Bedfordshire. The highest proportions were 105 in Derbyshire, 107 in Lancashire, 110 in Durham and in Denbighshire, and 112 in Cumberland.

In the 77 great towns infantile mortality averaged 96 per 1000 births, being 5 per 1000 more than that in England and Wales as a whole. Among the several towns the lowest proportions were 47 in Reading, 55 in Bournemouth, 60 in Brighton, 61 in Burton on Trent, and 67 in Hornsey and in Wallasey; the highest were 138 in Bury, 141 in Stoke on Trent, 144 in Burnley, and 145 in Blackburn. Among the 136 smaller towns infantile mortality averaged 87 per 1000 births, ranging from 25 in Canterbury, 28 in Stafford, 31 in Reigate, 33 in Erith and in Ilford, and 35 in Barry, to 152 in Darwen, 155 in Ince in Makerfield, in Accrington, and in Batley, 156 in Barnsley, 161 in Hyde, and 174 in Middleton. Excluding these 213 towns, infantile mortality in the remainder of England and Wales was in the proportion of 86 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty-five years was at the annual rate of 7·6 per 1000 of the estimated population at this group of ages. In the 77 great towns the mean mortality at this age-group was 8·4 per 1000, the death-rates ranging from 4·5 in Reading, 4·8 in Bournemouth, 5·0 in Handsworth (Staffs.) and in Kings Norton, and 5·2 in Hornsey to 10·4 in St. Helens and in Tynemouth, 10·6 in Dewsbury, 11·8 in Liverpool, and 12·7 in Middlesbrough. In the 136 smaller towns the mortality at this age-group averaged 7·1 per 1000.

Among persons aged sixty-five years and upwards the mortality was at the annual rate of 85·2 per 1000 of the estimated population at this group of ages. In the 77 great towns the mean mortality at this age-group was 93·2 per 1000; the lowest rates were 59·1 in Leyton, 60·9 in Coventry, 65·7 in Newport (Mon.), and 69·2 in Dewsbury; the highest rates were 116·1 in Barrow in Furness, 119·4 in West Hartlepool, 123·8 in Newcastle on Tyne, and 126·8 in Middlesbrough and in South Shields. In the 136 smaller towns the rate averaged 87·5 per 1000.

Mortality from certain Epidemic Diseases.

The 119,984 deaths from all causes include—

4,154			that were attributed to measles,
2,365	"	"	whooping-cough,
1,500	"	"	diarrhœa and enteritis
			(under 2 years),
936	"	"	diphtheria,
403	"	"	scarlet fever,
350	"	"	enteric fever,
9	"	"	small-pox,
3	"	"	typhus,
1	"	"	pyrexia of uncertain origin.

Thus, to the above-mentioned epidemic diseases in the aggregate, 9,721 deaths were referred last quarter.

The average mortality from diarrhœa and enteritis under 2 years of age, typhus, and pyrexia of uncertain origin, is not available for comparison; the rates for each of the other diseases, except measles, were below the decennial average.

Measles was returned as the cause of 4,154 deaths last quarter, corresponding to an annual rate of 0·46 per 1000 of the population, or 0·09 per 1000 above the average in the second quarters of the preceding ten years. Of the 55 registration counties, seven were free from measles mortality, and the death-rate did not exceed 0·03 per 1000 either in Suffolk, Cornwall, Somersetshire or Denbighshire. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·64 in Gloucestershire and in Worcestershire, 0·69 in Derbyshire and in the North Riding of Yorkshire, 0·78 in Middlesex, 0·81 in Durham, and 0·84 in Devonshire. In the 77 great towns measles caused an average mortality of 0·56 per 1000. In nine of these towns no deaths from this disease were registered. The highest death-rates were 1·10 in Manchester, 1·14 in South Shields, 1·31 in Stockton on Tees, 1·36 in Plymouth, 1·42 in Devonport, and 1·59 in Rhondda. In the 136 smaller towns, the average death-rate was 0·56 per 1000 living, the highest mortality among these towns being in Ince in Makerfield, Acton, Chesterfield, Torquay, Rochester and Barnsley. In the remainder of England and Wales the average measles death-rate was 0·32 per 1000.

Whooping-cough accounted last quarter for 2,365 deaths, and for a death-rate of 0·26 per 1000 annually, which is below the average rate in the ten previous corresponding quarters by 0·07 per 1000. In Rutlandshire and in Anglesey no death from whooping-cough was registered last quarter, and the death-rate did not exceed 0·04 per 1000 in Buckinghamshire. Among counties with populations exceeding 100,000, the highest death-rates from this cause were 0·45 in Gloucestershire, 0·46 in Durham, 0·47 in the East Riding of Yorkshire, 0·49 in Northumberland, 0·63 in the North Riding of Yorkshire, and 0·76 in Denbighshire. In the 77 great towns whooping-cough caused an average death-rate of 0·31 per 1000 living. No deaths from this disease occurred in four of these towns; but the rate was equal to 0·72 in Burnley and in Newcastle on Tyne, 0·78 in Blackburn, 0·89 in Warrington, and 1·03 in Middlesbrough. In the 136 smaller towns the average death-rate from whooping-cough was 0·23 per 1000, the mortality being highest in Mansfield, Ince in Makerfield, Batley, Middleton, and Felling. In the remainder of

England and Wales whooping-cough caused an average mortality of 0·22 per 1000 annually.

Diarrhœa and *enteritis* (under 2 years) was the assigned cause of 1,500 deaths last quarter, corresponding to an annual rate of 0·17 per 1000 of the population at all ages. In five counties no death under 2 years from these diseases was registered. Among counties with populations exceeding 100,000 persons, the highest death-rates were 0·25 in Lancashire, 0·28 in Staffordshire, 0·29 in the North Riding of Yorkshire, 0·31 in Warwickshire, and 0·32 in Glamorganshire. In the 77 great towns the average death-rate from these causes (under 2 years) was equal to 0·21 per 1000 of the population at all ages. No deaths were recorded in five of these towns, the highest death-rates being 0·40 in Wigan, 0·42 in Birmingham, 0·44 in Rhondda, 0·47 in Liverpool, 0·54 in Merthyr Tydfil, 0·57 in Middlesbrough, and 0·64 in West Bromwich. In the 136 smaller towns the average death-rate was 0·14 per 1000, the mortality being highest in Oldbury, Tipton, Widnes, and Coseley. In the remainder of England and Wales the death-rate averaged 0·13 per 1000.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 936 deaths, a number corresponding to an annual rate of 0·10 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·05 per 1000. In three of the registration counties no deaths from this disease occurred last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·16 in Glamorganshire, 0·18 in Herefordshire, 0·20 in Cornwall and in Derbyshire, and 0·21 in the North Riding of Yorkshire. The average death-rate from diphtheria in the 77 great towns was equal to 0·12 per 1000 of their aggregate population. Thirteen of the towns were free from diphtheria mortality. The highest death-rates were 0·28 in Swansea, 0·29 in Bolton, 0·31 in Croydon, in Salford, and in Gateshead, 0·32 in Reading, and 0·34 in Stoke on Trent. In the 136 smaller towns the mortality from this disease averaged 0·09 per 1000, the rate being highest in Hendon, Swinton and Pendlebury, Cambridge, and Chesterfield. In the remainder of England and Wales diphtheria caused an average mortality of 0·09 per 1000 living.

Scarlet fever accounted last quarter for the deaths of 403 persons, equal to a rate of 0·04 per 1000 living, or 0·06 per 1000 less than the decennial average rate for the second quarter. Sixteen of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·07 in the West Riding of Yorkshire, 0·08 in Staffordshire and in Lancashire, 0·11 in Warwickshire, and 0·15 in Dorsetshire. In the 77 great towns scarlet fever accounted for an average mortality of 0·06 per 1000 annually. No deaths from this disease were recorded in thirty-two of these towns. The highest scarlet fever death-rates were 0·18 in Rochdale, 0·19 in Stoke on Trent, 0·20 in Liverpool, 0·22 in Huddersfield, and 0·34 in Coventry. In the 136 smaller towns the average death-rate from scarlet fever was 0·05 per 1000 living, the highest mortality being in Chorley, Darlington, Middleton, and Poole. In the remainder of England and Wales this disease caused an average death-rate of 0·03 per 1000 living.

Enteric fever.—As in previous returns deaths from *enteric fever* have been tabulated in the present return separately from those due to *typhus*, or to *pyrexia* of uncertain origin. They numbered 350,

equal to a rate of 0·04 per 1000. The inclusion of 3 deaths from typhus and 1 from pyrexia would not alter this rate, which is 0·03 per 1000 below the average death-rate from "*fever*" in the second quarters of the previous ten years. In nine counties no deaths from enteric fever were returned last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·07 in Lancashire, and 0·12 in Monmouthshire. In the 77 great towns enteric fever caused an average mortality of 0·04 per 1000 annually. In twenty-nine of these great towns no deaths from enteric fever occurred, and the death-rate was only 0·01 per 1000 in London, in Bristol, and in Leeds. The highest enteric fever death-rates were 0·12 in Halifax, 0·18 in Wigan, 0·21 in Preston, 0·29 in Devonport, and 0·32 in Rotherham. In the 136 smaller towns enteric fever caused an average mortality of 0·05 per 1000 annually, the rate being highest in Accrington and in Leigh (Lancs.). In the remainder of England and Wales the death-rate from enteric fever averaged 0·04 per 1000.

Nine deaths from *small-pox* were registered last quarter in England and Wales, the numbers in the four quarters immediately preceding having been 8, 1, 2, and 9, respectively.

Violent Deaths.

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 4,893 last quarter, and corresponded to an annual rate of 0·54 per 1000 of the population, which is 0·02 per 1000 below the average in the ten preceding second quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·33 in Berkshire, 0·34 in Oxfordshire and in Dorsetshire, and 0·37 in Middlesex and in Leicestershire; the highest rates were 0·61 in the West Riding of Yorkshire, 0·63 in Lancashire and in Durham, 0·66 in Glamorganshire, and 0·71 in Cumberland. In the 77 great towns the mean rate was 0·55 per 1000 living. Among the several towns the rate was only 0·10 in Bournemouth, 0·16 in Reading, 0·20 in Southampton, and 0·24 in Devonport; but it rose to 0·87 in Sunderland, 0·88 in West Hartlepool, 0·89 in Bury, 0·91 in St. Helens, and 0·94 in West Bromwich.

Certification of Causes of Death.

Of the 119,984 deaths registered in England and Wales last quarter, the causes of 109,557, or 91·3 per cent., were certified by registered medical practitioners, and the causes of 8,857, or 7·4 per cent., by coroners, after inquest, whilst the causes of the remaining 1,570, or 1·3 per cent., were not certified, the average percentage of uncertified deaths in the ten preceding second quarters having been 1·5. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Hampshire, Middlesex, Hertfordshire, Buckinghamshire, Wiltshire, Dorsetshire, Devonshire, Cornwall, Somersetshire, Gloucestershire, Cheshire, the West, East, and North Ridings of Yorkshire, Monmouthshire, and Glamorganshire, but it reached 2·8 in Warwickshire, 3·1 in Derbyshire, 3·2 in Berkshire, and 3·4 in Durham and in Cumberland. In the 77 great towns the mean proportion of uncertified deaths was 0·8 per cent.; but whilst no uncertified deaths were registered in Croydon, Willesden, Hornsey, West Ham, East Ham, Walthamstow, Brighton, Southampton, Northampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Aston Manor, Derby, Oldham, Dewsbury, York, Middlesbrough, or

Cardiff, the proportion per cent. rose to 3·3 in Birmingham, 4·0 in Warrington, 4·3 in Barrow in Furness, 5·8 in Bootle, and 7·1 in Gateshead.

Inquests.

Inquests were held in England and Wales concerning 8,857, or 7·4 per cent., of the total deaths, the mean proportion in the ten preceding second quarters having been 6·9 per cent. In the 77 great towns the proportion of inquest cases averaged 8·3 per cent., ranging from 2·5 in Reading, 3·9 in Bootle and in Gateshead, and 4·0 in Warrington, to 11·2 in Derby, 11·3 in East Ham and in Rotherham, and 12·2 in Tottenham.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 25,187, or 21·0 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding second quarters having been 18·4 per cent. In the 77 great towns the deaths in public institutions averaged 28·4 per cent. of the total deaths, the lowest percentages in the several towns being 5·9 in Rhondda, 6·6 in Handsworth (Staffs.), 7·1 in Kings Norton, and 9·9 in Wigan; the highest percentages were 35·1 in Leyton, 36·4 in Liverpool, 36·9 in Walthamstow, 37·0 in West Ham, and 42·5 in London.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual rates of birth and death per 1000 living in these towns last quarter were as follows :—

—	Birth-rate.	Death-rate.
Edinburgh	23·7	16·5
Glasgow	29·6	17·3

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 31 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the 13 weeks ended 1st July, 1911 (Table XIV.). Excluding the Indian and Egyptian cities, the highest and lowest annual rates of birth and death during the second quarter of 1911 were as follows :—

BIRTH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Bucarest	31·3	Brussels	16·7
Trieste	29·7	Paris	17·7
St. Petersburg	28·1	Prague	19·8
Cologne	27·7	Antwerp	19·8
Breslau	26·7	Berlin	20·3
New York	26·3	Vienna	20·7
		Dresden	20·7
London ... 25·2			

DEATH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Moscow	29·9	Antwerp	10·2
Bucarest	26·1	Frankfort on Main ...	12·0
Rio de Janeiro	22·8	Amsterdam	12·0
St. Petersburg	22·7	Brussels	12·2
Trieste	22·6	Leipzig	13·3
New Orleans	20·4	Dresden	14·0
London ... 13·2			

Small-pox caused 107 deaths in Moscow, 38 in St. Petersburg, 2 in Rio de Janeiro, 1 in Trieste and 1 in New Orleans.

The mortality from *enteric fever* was highest in Venice, New Orleans, St. Petersburg, Paris, Chicago, Prague, Philadelphia, and Bucarest; from *measles* in St. Petersburg, Moscow, Cologne, Paris, Amsterdam, and Trieste; from *scarlet fever* in Moscow, Budapest, Bucarest, New York, St. Petersburg, and Chicago; from *whooping-cough* in Christiania, Copenhagen, New Orleans, and Cologne (in London the mortality from whooping-cough was also excessive); and from *diphtheria* and *croup* in Hamburg, Moscow, Berlin, Chicago, and New York.

Infantile Mortality.—Among those European cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 81 in Stockholm, 89 in Amsterdam, 93 in Frankfort on Main, and 98 in Brussels to 158 in Prague, 163 in Vienna, 176 in Trieste, 186 in Breslau and 217 in Bucarest. In London the proportion was 89 per 1000 births.

INDIAN CITIES.—The death-rate was equal to 27·7 per 1000 in Calcutta, 32·5 in Madras, and 38·6 in Bombay. *Small-pox* caused 161 deaths in Madras, 202 in Bombay, and 27 in Calcutta; *measles* caused 156 deaths in Bombay, 47 in Madras, and 19 in Calcutta; *plague* caused 2,245 deaths in Bombay, and 1,154 in Calcutta; and *Asiatic cholera* caused 666 deaths in Calcutta, 3 in Bombay, and 3 in Madras.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the 13 weeks ended 1st July, 1911 (*see* pages xxvii—xxxii); and in the two following tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

TABLE V.-77 Great Towns.-Population; Births, Deaths, and Meteorology in the 13 Weeks ended 1st July, 1911.

NOTE.-The 77 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-residents, and (2) by including the deaths of London residents occurring in the Metropolitan Outer Ring or in Metropolitan Public Institutions situated outside the County. (See also Table XI.) The deaths in the other towns have been corrected as far as possible, (1) by the exclusion of all deaths of non-residents, and (2) by the inclusion of deaths of residents in certain outlying public institutions. With regard to the Outer Ring and its constituent areas, however, correction is more complete, a distribution of all transferable deaths occurring in any part of Greater London having been made.

TOWNS.	ESTIMATED POPULATION in the middle of 1911.*	BIRTHS.	DEATHS.	Deaths of					Deaths from						Deaths in Public Institutions.		Uncertified Cases or Death.	MEAN TEMPERATURE (Degrees Fahr.).	RAIN-FALL (Inches).	TOWNS.

* Rate calculated upon the population at all ages.

TABLE VII.—One hundred and thirty-six Smaller Towns.—Population: Births and Deaths in the Quarter ended 30th June, 1911.

NOTE.—The 136 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected as far as possible, (1) by the exclusion of all deaths of non-residents, and (2) by the inclusion of deaths of residents in certain outlying institutions. With regard to towns in the Outer Ring, however, correction is more complete, a distribution of all transferable deaths occurring in any part of Greater London having been made.

TOWNS.	Cols.	The DEATHS registered in the Quarter include																Deaths under 1 year to 1000 Births.	TOWNS.
		DEATHS from																	
		Deaths of																	
		Infants under 1 Year of Age.	Persons aged 65 Years and upwards.	Enteric Fever.	Small-pox.	Measles.	Scarlet Fever.	Whooping-cough.	Diphtheria.	Diarrhoea and Enteritis (under 2 years).	Violence.	Inquest Cases.	Deaths in Public Institutions.	Uncertified Causes of Death.

* The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note.^b

^b For London the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

Registration Districts.	Area in Statute Acres.	Enumerated Population, 1911. (Unrevised.)	Marriages Registered in Quarter ended 31 Mar. 1911.	Births Registered in Quarter ended 30 June 1911. ^a The Registration Sub-districts (2008 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; *F* a Hospital for Infectious Diseases; *H* another Hospital; *L* a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

^b See page 2, note ^b.

^c See page 6, note ^b.

* 627 : 2.—Of the 4 deaths from measles, 3 belonged to the parish of Llanenddwyn.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 30TH JUNE, 1911.

Changes in Registration boundaries are made by order of the Registrar-General, with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING
THE QUARTER ENDED JUNE 30TH, 1911.

EXTRACTED FROM THE

MONTHLY WEATHER REPORTS

OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 222 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 57
STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

APRIL, 1911.

Pressure, Winds and Weather.—The month now under notice may be divided into two periods of almost equal duration, in which the distribution of atmospheric pressure was totally different. During the second half of March anticyclones ruled in the neighbourhood of the Arctic Circle, while disturbances remained nearly stationary for days out at sea beyond our south-western coasts and on the Bay of Biscay. On the morning of April 1st a general southward transference of both types was observed to be in progress, the low pressure system eventually passing down to Madeira, and the high pressure becoming established over the British Isles. A steady rise of the barometer took place, and by the 5th the anticyclone had attained its greatest intensity, pressure exceeding 30·5 in. at the northern and north-western stations, reaching 30·62 in. at Nairn, and 30·63 in. at Stornoway, the highest readings in these islands during the month, but on the evening of the 8th 30·71 in. was reported out at sea a short distance from the north-west of Ireland. With the barometer at about 30·4 in. to 30·5 in. the anticyclone maintained its position over the country for nearly a fortnight, without undergoing much change of position or shape. From the reports of the morning of the 14th it was evident that a rapid change in the situation was setting in. The area of high pressure was passing southward towards the Bay of Biscay and the Spanish Peninsula, the barometer was giving way briskly over all the northern regions, and thenceforward, until the close of the month, the weather over these islands was affected mainly by a series of cyclonic disturbances from the Atlantic, advancing upon our western coast or passing eastward beyond the north of Scotland. As a general rule these disturbances were of no great depth, pressure diminishing to a little below 29·5 in. at the centres of some of them. One, however, proved unusually deep for the time

of year the barometer falling below 29 in. when the centre was nearing the Irish coast on the evening of the 18th. Next morning the pressure minimum was over Ireland, 28·72 in. at Blacksod Point, and 28·73 in. at Birr Castle, the lowest values for the month. The system then altered its course to the northward, accelerated its movement, and disappeared to the north-eastward of Iceland on the 21st. In a secondary depression which formed over eastern Scotland on the morning of the 29th, the lowest barometer reading was 29·15 in. at Nairn. On the 21st there was a temporary northward expansion of the anticyclone from south-western Europe to the southern half of the United Kingdom, the barometer mounting above 30·5 in. along the south coast of England, and touching 30·6 in. at Jersey. For the entire month, therefore, the range of pressure was rather large, being more than an inch at Oxford and in London, exceeding $1\frac{1}{4}$ in. at Birr Castle and Malin Head, and amounting to 1·9 in. at Blacksod Point. The distribution of mean pressure was somewhat irregular, the lowest values being up the Norwegian coast, below 29·7 in. at Bodø, beyond the Arctic Circle. The highest results were in France and the Azores, up to nearly 30·1 in. and to the northward of Iceland, about 30 in. At the home stations the values were from 30·06 in. at Jersey to 29·86 in. at Sumburgh Head. This Shetland value was practically equal to the average, all other stations being above the average, the excess increasing southward from 0·04 in. at Wick to 0·13 in. at Roche's Point and Jersey, and 0·14 in. at Scilly. The mean gradient was consequently considerably steeper than usual, 0·20 in., against 0·08 in., between Shetland and the Channel Islands. Owing to the month having been divided nearly equally between anticyclonic and cyclonic types the winds varied greatly in direction, the south east quarter being the least frequented.

Taken as a whole, the month was of a very breezy character, even during the existence of the anticyclonic system over us, winds exceeding the force of a strong breeze being reported on all but five days. A well-marked disturbance in the Italian region in the early part of the month spread northward, and occasioned a decided increase in the pressure gradient over our southern and eastern districts between the 5th and the 7th, high North-Easterly winds resulting. On the 5th a gale was felt at Yarmouth, a strong gale (force 9) at Dover; and next day the gale was general over the southern half of England, a strong gale at Dungeness and Scilly. Gusts at the rate of 63 miles per hour were experienced at Gorleston on the 3rd, and 59 miles an hour at Shoeburyness on the 5th. These boisterous conditions were accompanied by daily falls of snow over a wide area, a depth of from 3 in. to 4 in. in a day being measured by several observers. The most remarkable feature of the period was the unprecedented cold during the daytime. More striking were the low afternoon maxima on the 5th, numerous stations in England, mainly in the south, failing to rise above 35°, Southend touching 32°, Matfield (Kent) 31°, and Sandown 30°. At noon the Hampstead reading was 28°; at Westminster, 3 p.m., 32°; and at Matfield, 3.20 p.m., 26°. At Totland Bay, Isle of Wight, the lowest April maximum in the previous twenty-six years had been 43°, but on the 5th of the present month it was only 34·6°; next day it touched 38°, and on the 7th 42°. In Scotland the maxima were generally 40° and upwards. Frost was general, many night shade temperatures descending to 25° and under, to 23° at Armagh, Birr Castle and Pottalloch; 22° at Wokingham, Hampstead, Cromer, Llangamarch Wells, and Markree Castle; 21° at Balmoral, Kingussie and Sheepstor; 20° at Colmonell and Thorntonhall, and 17° at West Linton.

Between the 10th and the 13th a depression near Madeira expanded northward across the Peninsula, again steepening the gradient and causing high North-Easterly winds across southern England.

Thereafter Southerly to Westerly or North-Westerly winds prevailed, under the influence of the various low pressure systems, but although these produced a very windy period, the only gale worthy of mention was that associated with the deep depression which moved up our western districts between the 18th and 20th. Out on the Atlantic ships had experienced a strong to whole Northerly and North-Westerly gale on the 17th and 18th, and as the centre approached Ireland on the latter date a Southerly gale sprang up on our western and south-western coasts, a whole gale (force 10) at Roche's Point, the anemometer at Pendennis Castle registering a velocity of 52 miles in an hour, while in gusts, velocities were recorded at the rate of 64 miles per hour at Plymouth, 66 miles at Roche's Point, 67 miles at Llaneluad, and 68 miles at Pendennis. Next day the Southerly gale was maintained in many places, a strong gale at Holyhead and Nottingham, a whole gale at Scilly, with anemometrical records in gusts of 67 miles per hour at Holyhead, and 70 miles at Llaneluad. As the centre moved northward, the wind veered to the West on the 20th, blowing a strong gale at Scilly, a whole gale at Malin Head.

Occasionally during the second half of the month fairly high temperatures were registered in various districts, above 65° in places, 67° on the 14th or 15th at Westminster, Camden Square and Wilton (Salisbury), 68° on the 13th at Killarney, and on the 22nd at Camden Square, Cromer and Geldeston, and 69° at Hull on the 21st, and at Cambridge and Norwich on the 22nd, many of the morning minima on the latter day being 51° or 52°, and on the morning of the 23rd as high as 54° at Kingstown.

A notable characteristic of the month was the almost entire absence of heavy rainstorms, even during the more unsettled period, few instances of more than an inch in a day being registered, 1·5 in. at Gruline (Mull) on the 17th, and at Bethesda on the 19th; 1·8 in. at Loch Torridon on the 21st; and 2·2 in. at Seathwaite on the 25th. On the other hand, rainless spells of 14 or more consecutive days were experienced at a very large number of stations. In the north-west the drought which set in about the middle of March continued in places till the middle of April, 30 rainless days at Gruline, and 29 at Graythwaite. Further south the dry weather was within the first twenty-four days of April, 18 days at Oundle and Send (Surrey), 19 at Brandon, and 20 at Beaconsfield.

The thunderstorms of the month were few and unimportant, and aurora was seen on the 8th at Stornoway only.

Fog was rather prevalent on the western and southern coasts on the 1st and 2nd, and from the 13th to the 28th; but up the east coast it was an occasional visitor at one or two places.

On nearly every section of our coasts the temperature of the sea water was higher than in March, by 3° off the west and north west of Ireland, 4° at the Orkneys. The water was colder than the air on the east coast of Britain and western channels, as much as 5° colder on the Firth of Cromarty. In other localities the water was warmer than the air, by 3° off Shetland, 4° on the Kerry coast.

Rainfall.—There was a considerable excess of precipitation in the north and west of Scotland, and a fairly large deficiency over the eastern half of England, but elsewhere it differed little from the normal. Fort William had an excess of 2·7 in. (72 per cent. of the average), and Whitby a deficiency of 1·3 in. (80 per cent.). Totals exceeding 6 in. were not numerous, the only ones exceeding 9 in. being 12·7 in. at Seathwaite, and 17·5 in. at Glenquoich, Loan. Many stations received less than an inch in all, 0·5 in. at Ruthin, St. Asaph and Shrewsbury, 0·4 in. (30 per cent.) at Hawarden Bridge, and 0·3 in. (20 per cent.) at Whitby. The frequency ranged from 29 days at Baltasound, and 24 at Stornoway and Wick to 10 or less in many places, 8 at Beaconsfield, and 7 at Brandon and Dursley.

Bright Sunshine.—Over the greater part of the kingdom there was a marked lack of sunshine, the deficiency exceeding 30 hours in several instances, 46 hours at Newton Rigg, 47 (31 per cent. of the average) at Strathpeffer, and 50 (31 per cent.) at Stornoway, while London did well, Westminster showing an excess of 31 hours (28 per cent.). The aggregate totals ranged from 202 hours at Felixstowe, 201 at Guernsey (104 per cent.), and 200 at Jersey (106 per cent.), to 90 hours at West Linton, and 88 at Eskdalemuir, and 71 hours (61 per cent.) at Fort Augustus.

MAY, 1911.

Pressure, Winds and Weather.—The distribution of atmospheric pressure during May was unusually variable, so that it is difficult to divide the month into periods exhibiting any approach to definite types of conditions. Cyclonic and anticyclonic systems were always on the move, and in nearly all instances their centres were outside the British Isles, to east, west, north or south. The highest barometer readings occurred in extensions over these islands of Continental or Arctic anticyclones. On the 6th and 7th values were above 30·3 in. at most of our southern stations; on the 19th a reading of 30·41 in. was recorded at Stornoway in a high pressure area which had spread down from the north; and on the 28th the mercury reached 30·47 in. in Shetland, the centre of the system, with the barometer

above 30·5 in., being on the Norwegian coast. Numerous disturbances were indicated in the course of the month on the north-west quarter of the Atlantic, but all moved along paths to the north-eastward, the centre of one passing close to the Farøe, while the others crossed Iceland, or moved up Denmark Strait, between Iceland and Greenland. Some of these depressions were very deep, the barometer descending below 29 in. One which appeared beyond the south-west of Iceland on the morning of the 1st, advanced due eastward at a very slow rate, not reaching the Farøe until the morning of the 4th. On its approach the barometer at Stornoway fell rapidly to 28·89 in. on the 3rd, the only record in this country below 29 in. during the month. The centre then moved to the north-eastward, and soon disappeared beyond the Arctic Circle. Several disturbances visited Southern Europe. One of these, which appeared over northern Italy on the 6th, followed an erratic path to Spain and Western France, and finally dispersed over north-eastern France on the 11th. The only depression whose centre crossed the British Isles travelled along an unusual path. It was indicated to the north-westward of the Azores on the 9th moving south-eastward. Altering its course to the eastward it reached Portugal on the evening of the 10th, then followed an irregular path to Brittany by the evening of the 12th. On the 13th and 14th it moved northward through the western channels to the Irish Sea, the barometer falling to about 29·6 in. Subsequently the depression crossed the south of Scotland to the North Sea, and eventually dispersed on the 16th, between Shetland and Norway.

Owing to the proximity of one of the Icelandic disturbances the range of pressure during the month over the northern half of these islands exceeded an inch, and at Stornoway it amounted to 1·52 in. In the south, however, no deep depressions were experienced, so that the range at most of the southern stations was less than $\frac{1}{2}$ in. The mean pressure results for the whole month show that the highest values, above 30·05 in., were over Sweden and eastern Germany, with a belt of relatively high values, above 30 in., stretching across the North Sea and England to Brittany and the Bay of Biscay. This belt separated a shallow low over western Europe, below 30 in., from an extensive depression having its centre off the south-west of Iceland, where the barometer was 29·6 in. At the home stations the mean results ranged from 30·06 in. at Kew Observatory to 29·95 in. at Birr Castle and Castlebay. The distribution differed considerably from the normal, and as a result of the ever-changing position of the various pressure systems the winds were distributed through every quarter of the compass.

In the opening days of the month the depression to the southward of Iceland was marked by a considerable gradient for winds from between West and South over these Islands, so that the force of a strong breeze was exceeded in many parts of the country. The conditions, however, were not of a stormy character, a strong gale (force 9) being noted at Malin Head on the 1st and 2nd, and a gale (force 8) at Holyhead, Pembroke, Portland Bill, Nottingham and Spurn Head on the 3rd. This absence of very rough weather is confirmed by the records from anemometers which show that the only instances during the month of wind velocities at the rate of 50 miles an hour and upwards in gusts of short duration were 58 miles at Llanelugrad on the 2nd, 52 miles at Quilty and Shoburyness, 55 miles at Holyhead, 57 miles at Pendennis Castle, and 64 miles at Llanelugrad on the 3rd. Under the influence of other disturbances near Iceland a Southerly gale was felt at Stornoway on the 8th, and at Stornoway and Malin Head on the 25th. These exhaust the instances of gale force at the telegraphic reporting stations.

A remarkable feature of the weather of the month was the general absence of rain in all parts of the kingdom, the number of days on which precipitation was measured being less than 10 at the great majority of stations. Continuous periods of 15 or more rainless days occurred in many districts—16 days from the 14th at Skegness, from the 15th at Heathfield, and from the 16th at Killiney and Inch; 17 days from the 14th at Colwyn Bay and Sandgate, and from the 15th at Eastbourne, Brighton, Barnstaple, Hidcote (Campden), and Lampeter; 18 days from the 11th at Plymouth, Falmouth and Penzance, and from the 14th at Rhyl and Bridlington; 20 days from the 5th at Edgbaston, and from the 12th at Newcastle, Wicklow; and from the 4th 21 days at Rugby and Sparkhill; 22 days at Wistanstow; 23 days at Sheepstor; and 26 days at Fowey. In some of these cases the drought remained unbroken at the close of the month, and extended far into June.

Notwithstanding this droughty feature there were some heavy rainstorms. The most windy days of the month brought with them large amounts of rain to many localities, without being accompanied by thunderstorms. On the 1st Gruline (Mull)

registered 2·1 in., Cruachan 1·3 in., Fort William 1·3 in., Ford (Argyll) 1·2 in., and Caragh Lake (Kerry) and Oban a little over an inch; on the 2nd there was a fall of 2·2 in., at Caragh Lake, and an inch or a little over at Sheepstor, Valencia Observatory and Broadford (Clare); and on the 3rd 1·4 in., at Graythwaite (Ulverston), at Bethesda 1·2 in., and 1·1 in., at Uldale, Pant-yr-Eos and Eskdalemuir.

With the arrival over the Bay of Biscay and the north of France of the shallow depression which had previously worked round from Italy, conditions became favourable for thunderstorms over southern England on the 10th, and on the three following days the greater part of the kingdom was affected. In many instances the storms were reported to be violent and the thunder of unusual intensity. Numerous churches and other buildings in various districts were damaged by the lightning, and horses and cattle were killed. Locally, also, there was considerable destruction caused by the overflowing of the smaller rivers, but the returns disclose very few cases of large falls of rain. On the 11th, Valencia Island had 1·2 in.; on the 13th, Burnley and Newton Rigg 1·7 in., York 1·3 in., Carrigallen (Leitrim) 1·1 in., and Belfast an inch; and on the 14th Burnley had another 1·3 in., making 3 in. in 2 days. At Kirkby Lonsdale 0·5 in. fell in half-an-hour. From the 15th to the 24th there were only a few sporadic thunderstorms or heavy local rains, 1·2 in., at Kinlochewe on the 22nd, but the 25th to the 27th were again marked by severe thunderstorms, and a few heavy rainfalls. On the 25th Wokingham had 1·8 in. of rain, Winslow 1·6 in., Watergate and Watlington 1·4 in., and Reading 1·3 in.; and on the 26th Claypole (Lincs.) 1·5 in. in 6½ hours, and Bromyard in 8 hours. Belvoir Castle 1·4 in. in 9 hours, and Abergavenny during the day; Great Billing an inch in 4 hours, and another inch in the next 5 hours, or 2 in. for the day. At Upwey (Dorset) 1·3 in. fell in 1 hour 25 minutes. Much damage resulted from floods and lightning. At Epsom, in the night of the 25th, 1,797 lightning flashes were registered in 6 hours 50 minutes, the maximum number in one minute being 22, and in 1 hour 581. Another very violent storm broke over a large part of England on the 31st, rainless in some places, heavy rain in others, 1·1 in. at Newdigate (Surrey), 1·3 in. at Offley, 1·6 in. in one hour in Sevenoaks, 2·44 in. in 50 minutes, and 2·36 in. in 3 hours at Epsom, 3·6 in. at Banstead. At Epsom there were 159 flashes of sheet and fork lightning in 15 minutes, and within a radius of 3 miles, 3 persons were killed, 14 injured, 4 horses killed, and 3 hayricks fired.

Mildness was an almost constant feature of the month, so that the mean temperature was everywhere above the average, by more than 4° at many stations, nearly 5½° at Buxton and Prestwich. At Southport the mean temperature was the highest May value in 40 years. The warmest days were at the close, temperature ascending to 80° and upwards on the 29th to 31st, to 83° at Balmoral and Fort William on the 29th. Frost occurred on various dates, the lowest record being 27° at Eskdalemuir on the 6th. The touch of cold which is usual about the 12th was on this occasion delayed until about the 21st, but it affected the day readings mostly, a few maxima being below 50°. Very few of the night readings indicated frost in the shade.

Fog was very prevalent on the western coasts from the 5th to the 9th, 13th to 18th, and 23rd to 26th; on the south coast, 11th to 18th, and 23rd to 25th; and on the east coast, 12th to 18th, and 26th to 31st.

The sea water was everywhere warmer than in April, by as much as 9° off Eastbourne and Margate, and 10° on Cromarty Firth. Nevertheless the water was colder than the air on shore in nearly all localities, to the extent of 6° at several eastern stations, and 7° off Plymouth and at the entrance to the Mersey.

Rainfall.—In a few cases the heavy thunderstorm rains caused the aggregate amount for the month to be above the normal, but generally the precipitation was well under the average, by more than inch in many localities. Killarney returned 5·5 in. (184 per cent. of the average), Rothamstead 3·6 (1·81 per cent.), and Fort William 6·1 in. (161 per cent.), but Guernsey had only 0·6 in. (31 per cent.), and Birmingham 0·71 in. (32 per cent.). The largest totals were 10·1 in. at Glenquoich (183 per cent.), and 8·7 in. (115 per cent.) at Seathwaite, but those below an inch were very numerous, down to 0·4 in. at Stifford and Bridlington. Rain fell on 20 days at Caragh Lake, but as a rule the frequency was small, only 4 days in several places.

Bright Sunshine.—There was an all-round excess of sunshine, by more than 50 hours at many stations. Hastings had 286 hours (122 per cent. of the average),

Felixstowe 286, Penzance 282, Douglas 279, (123 per cent.), and Scilly 278 (117 per cent.), being 59 or 60 per cent. of the possible duration, while Fort Augustus had 160 hours (118 per cent. of the average), and Hull 150 hours.

JUNE, 1911.

Pressure, Winds and Weather.—The main features of the general distribution of atmospheric pressure during the period now under review were divided between two well-marked types, each occupying about one-half of the month. In the closing week of May an extensive anticyclonic system was established over the northern half of Europe, and by the opening days of June it was expanding in all directions. The Atlantic high pressure area at the same time spreading north-eastward. Eventually the two systems coalesced, and became one great anticyclone. By the evening of the 5th the centre was taking up a position over or near our western and north-western districts, the maximum pressure being attained on the 6th, when the barometer rose above 30·6 in. in Scotland and the north of Ireland, 30·65 in. at Castlebay. After this the intensity diminished slowly, and the centre drifted gradually to the north-westward and northward, to a position off the east of Iceland, where it was situated from the 11th to 13th. Then it changed its movement to the southward again, passing across the British Isles on the 15th and 16th on its way to Italy and the Mediterranean, the highest barometer readings during this period of translation being about 30½ in. As the system left our coasts the type of conditions underwent a complete transformation, and the remainder of the month was of a continuously unsettled cyclonic character.

Wireless reports from steamships had indicated the existence of a disturbance in the vicinity of the Banks of Newfoundland as early as the 10th, but its progress to the eastward, across the ocean, was very slow, its centre arriving in 47° N., 30° W., on the morning of the 15th. By this time it was beginning to declare its existence in the observations on our south-western coasts. Until the evening of the 16th it maintained a due easterly course to 48° N., 16° W., when, with one high pressure on the Continent, and another beyond the Arctic Circle, its advance became exceedingly erratic. Bearing away about north-north-east, off the west of Ireland, it took two days to reach the Southern Hebrides. Thence it drifted about over the sea between Scotland and Iceland, returning to the vicinity of St. Kilda on the morning of the 22nd, then struck off towards Shetland, but before reaching there retreated to the Hebrides in the night of the 23rd it suddenly moved off to the south-east at a much faster rate, its centre being found over Norfolk next morning. Here its course was again arrested, and during the next two days it crept slowly up the East Coast of Britain, and from the morning of the 26th it followed a north-easterly path up the Norwegian coast and across Lapland to the Arctic Ocean. During the long period of its complex wanderings in our neighbourhood it was of fairly uniform depth, the pressure minimum on most days being below 29·5 in. On the morning of the 22nd descending to 29·25 in. at Castlebay, on the return from the Iceland region, and to 29·29 in. at Spurn Head, on the evening of the 24th, when moving up the east coast. After the disappearance of this disturbance to the northward of Scandinavia another appeared over Iceland on the 28th. Its centre passed close to Shetland, where the barometer fell to 29·31 in. on the morning of the 30th, then curved off to the north-eastward up the Norwegian coast.

With an almost equal division of the period between anticyclones and cyclones the mean pressure for the month differed very little from the normal, the result at Lerwick being nearly 0·03 in. less, and at Blacksod 0·03 in. more than the normal. The actual values ranged from 30·07 in. at Paris, and 30·04 in. at Jersey to 29·92 in. at Lerwick, and 28·89 in. at Bodö, this belt of lower readings being flanked on its northern side by an Arctic high pressure, the mean reading at Seydisfjord, in the east of Iceland, being, 30·01 in. The range of pressure amounted to 1·4 in. at Castlebay and Malin Head, and 1·3 in. at Spurn Head, considerably less at the south-western stations. The gradient was very slight, and the conditions during the month favoured winds from all quarters of the compass.

It was not until the return of the Atlantic disturbance from the Iceland region towards the Hebrides, on the 22nd, that the winds showed any marked increase of strength, a strong South-Westerly gale being felt at Malin Head on that day. On the 24th and 25th gale force from points between South-West, North-West and North-East was experienced at a few coasts stations, and on the 26th Malin Head

reported an extreme force of 10 (a whole gale) from West North-West, and on the following day a strong gale (force 9) from North. This general absence of much wind was confirmed by the self-registering anemometers, only Roche's Point supplying an instance of a gust of short duration in which the wind attained a velocity at the rate of 55 miles per hour, on the 24th, there being no other record of as much as 47 miles.

The weather itself presented several interesting features. Under the high pressure distribution of the first half of the month there was a marked absence of rain, but, as explained in the Summary for May, this dry spell had set in in the earlier days of that month, and over an extensive region it was maintained as a partial drought until June 15th, with only one or two trifling showers in a period of five weeks or longer. Both in May and in June there were very numerous instances of a complete drought of 15 or more consecutive rainless days, the longest unbroken spells exceeding three weeks, being 22 days at Belfast and Bethesda, 23 days at Insch and Holyhead, 24 days at Lincoln, 30 days at Killiney, 31 days at Eastbourne, Brighton, and Barnstable, and 34 days at Newcastle, Wicklow. There were, however, a few heavy local rains in the first part of June, accompanying small irregularities of pressure. Thunderstorms occurred in many parts of the country between the 1st and the 4th, in many cases rainless. There was a terrific storm at Fort Rose on the 1st, producing only 0.1 in. of rain, while on the same day Cornwall and Devon suffered greatly from very heavy rain and hail during a severe storm, many cattle being killed. On the 3rd a thunderstorm at Mountmellick precipitated 1.3 in. of rain. A heavy storm visited the Channel Islands on the 8th, with rainfall up to 1.7 in. in Guernsey, the lightning causing considerable damage.

With the break which occurred on the 16th the weather became very wet for a period of 10 days, with thunderstorms of more or less violence in numerous districts almost daily. Until the 22nd the falls of an inch or more in a day were comparatively few, the largest 1.8 in. at Cruachan, and 1.9 in. at Gruline on the 21st. But the march of the disturbance from the Hebrides to Norfolk and thence up the East Coast was marked by a remarkable rainstorm unattended by electrical outbursts. Falls of more than an inch were unusually numerous, on the 23rd ranging up to 2.3 in. at St. Asaph, and 3.2 in. at Uldale; and on the 24th to 2 in. at Bethesda, 2.1 in. at Morpeth, 2.2 in. at Tynemouth, 2.3 in. at Leeds, 2.6 in. at Alnwick and Shields, 2.7 in. at Marchmont and 2.8 in. at Rothbury. In a continuous fall extending over about 55 hours Whitby registered 3.65 in. During the remainder of the month the rainfall was unimportant.

Temperature attained a high level in the first week, passing 80° in many places and touching 85° on the 5th at East Ham, Barnet and Norwood, and 88° at Camden Square. At Stonehaven a reading of 85° was recorded on the 8th. As a rule the remainder of the month had moderate day and night temperatures, but there were one or two brief but sharp touches of cold. A good deal of damage was occasioned by frost on the mornings of the 14th, 15th, and 16th in various parts of the Kingdom, the shade temperature touching 28° at Balmoral and Garforth, while at Llangammarch Wells there was a grass minimum of 19° and at Chopwellwood 20°, spruces and other forest plants being injured in this neighbourhood. Round the 25th the afternoon maxima were low, down to 49° at Eskdalemuir on the 24th, accompanied by flakes of snow, and 48° at Insch on the 26th.

On our coasts fog was less prevalent than usual at this season, reported at many places in the first four days, then from the 16th to the 18th in the west, and the 18th and 19th in the east. Towards the close it was recorded at a few western stations.

The temperature of the sea water along the coasts was everywhere warmer than in the preceding month, by as much as 5° to 7° at a large number of stations. Off the west and north of Ireland and along Sussex and Kent the water was warmer than the air on shore, by as much as 3° locally on the Irish coast. In most localities, however, the water was colder than the air, by 4° or 5° in several places.

Rainfall showed considerable local variations. Over Ireland and a considerable portion of central and southern England, the total amount was much less than the average. A slight deficiency was reported also at several of the Scottish stations but over North Britain as a whole the aggregate fall was large, the

difference from the normal being especially noticeable in the north-east of England. In many parts of Northumberland and Berwickshire, the total quantity for the month exceeded 5 in., the largest amounts reported to the Meteorological Office being 6·0 in. at Rothbury, 5·9 in. (285 per cent. of the average) at Alnwick Castle, 5·4 in. (291 per cent.) at North Shields, and 5·3 in. (234 per cent.) at Cockle Park, Morpeth. The lowest aggregates were 0·8 in. (39 per cent. of the average) at Malin Head, 0·9 in. (42 per cent.) at Dundee, and 1·0 in. at Dunrossness and Dunrobin Castle. The number of days with rain was generally rather small, less than 10 at several of the English and Irish stations, and only eight at Margate, Broadstairs, Clacton, Scilly, and Kingstown.

Bright Sunshine.—The total duration was nearly everywhere in excess of the normal, but the difference was as a rule somewhat small. On many parts of the English and Welsh coasts more than 250 hours were registered, the largest aggregates reported being 269 hours at Sandown, 261 hours at Totland Bay and Haverfordwest, and 260 hours at Westbourne. The smallest aggregates were 148 hours (110 per cent. of the average) at Fort Augustus, 153 hours at Hull, 162 hours at Baltasound and Birmingham and 165 hours (equal at the two respective stations to 107 and 116 per cent. of the average) at Deerness and Newcastle-on-Tyne.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

*Prepared in the Meteorological Office under the direction of
W. N. Shaw, LL.D., Sc.D., F.R.S.*

In compiling the following Tables (pp. 82 to 91) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South-East; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		4. ENGLAND, E.:—	
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Cromer ..	W. H. Archer, for Urban District Council.
Hampstead ..	E. L. Hawke, for the Hampstead Scientific Society.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Camden Square	H. Robert Mill, LL.D., D.Sc.	Norwich (Eaton) ..	A. W. Preston.
Westminster ..	The Meteorological Office.	Cambridge ..	R. Irwin Lynch, M.A. The Botanic Gardens.
Greenwich ..	The Royal Observatory.	Clacton-on-Sea	A. W. Shadick, for Urban District Council.
Norwood ..	W. Marriott.	Bennington ..	Rev. J. D. Parker, LL.D.
Kew ..	Meteorological Office Central Observatory.	Berkhamsted ..	E. Mawley.
2. ENGLAND, CENTRAL:—		5. ENGLAND, N.E.:—	
Huddersfield	J. Firth.	Cockle Park .. (near Morpeth).	T. E. W. Dobson, for the Northumberland County Council.
Wakefield ..	A. French, M.R.C.S., L.R.C.P.	North Shields	The Meteorological Office.
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.	Durham ..	F. C. H. Carpenter.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	York ..	Oxley Grabham, M.A., for Yorkshire Phil. Soc.
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobhyer, M.D., M.O.H., for the Corporation.	Spurn Head ..	The Meteorological Office.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Lincoln ..	W. Barr, for the Corporation.
Oxford ..	The Radcliffe Observatory.	Hull ..	H. B. Witty, for the Corporation.
Bath ..	W. H. Symons, M.D., M.O.H., for the Corporation.	6. ENGLAND, N.W., WITH NORTH WALES:—	
Shrewsbury ..	Capt. C. S. Reid, R.E.	Southport ..	J. Baxendell, for the Corporation.
Sheffield ..	E. Howarth. The Weston Park Museum.	Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.
Buxton ..	W. Pilkington.	Aspatia ..	J. Smith Hill, B.A., B.Sc., J.P. The Agricultural College.
Wistanstow ..	Rev. W. La Touche, B.A.	Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.
Cheltenham ..	A. C. Saxby, for the Corporation.	Liverpool (Bidston) ..	W. E. Plummer, M.A. Bidston Observatory.
3. ENGLAND, S.E.:—		Llandudno ..	W. Little, for the Town Council.
Salisbury ..	Thos. Challis, for the Earl of Pembroke.	Bettws-y-coed	Dr. H. W. Fox, for District Council.
Brighton ..	D. Forbes, M.D., M.O.H., for the Corporation.		
Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corporation.		
Eastbourne ..	S. R. Henderson, for the Corporation.		
Southampton ..	A. Vaughan, for Director General of Ordnance Survey.		
Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.		

Station.	Observer.	Station.	Observer.
7. ENGLAND, S.W., WITH SOUTH WALES:—		8. THE CHANNEL:—

* The Summary for "London" is for three calendar months. The "difference from average" is computed from the data for Camden Square, Norwood, and Kew, the average used being that for the 35 years 1871-1905. (Sunshine, 25 years 1881-1905, at Westminster and Kew.) A comparison with the averages for 65 years 1841-1905 for the Royal Observatory, Greenwich, is given in the following tables.

For corresponding values for the years since 1878, see Appendix I, to the Weekly Weather Report of the Meteorological Office, 1908.

NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—The hours of observation are indicated by the type in which the names of stations are printed. Clarendon, normal climatological stations, 9 a.m. and 9 p.m.; **BLACK CAPITALS**, telegraphic reporting, normal climatological stations, 7 a.m., 1 p.m., 9 p.m.; Roman, telegraphic reporting stations, 7 a.m., 6 p.m.; *Italics*, auxiliary climatological stations, 9 a.m. only (Ventnor 9 a.m. and 3 p.m.). At stations marked * an additional observation is taken, at 3 p.m. in the case of stations printed in clarendon type, and at 1 p.m. in the case of stations printed in Roman type. These additional observations are used in preparing the wind summaries, and in computing the number of days of overcast or clear sky. At telegraphic reporting stations (black capitals or Roman type), the results given under "hygrometer" and "cloud" are based on the morning observations only. At Lincoln and Westminster the hygrometrical results are based on the 9 a.m. observations only.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 9 a.m. only, or 9 a.m. and 9 p.m., or 7 a.m., 1 p.m., 9 p.m., or 7 a.m. and 6 p.m., as the case may be.

Hygrometer.—At certain stations the vapour pressure and relative humidity are the results obtained from the daily values. These are entered in italic type. At other stations the calculations are made from the monthly means of the dry and wet bulb readings.

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the mean of the estimates of the "amount of cloud" at the fixed hours of observation is less than 2, and as an "overcast" day if the mean is greater

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours (see above). At Falmouth, Kew and Stonyhurst the wind observations are based on the records of a standard Robinson anemometer (factor 2.2). (At Plymouth and Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer.) Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales.

Averages.—The averages used are—Temperature and Rainfall for the 35 years 1871-1905; Bright Sunshine for the 25 years 1881-1905. The values are published in Appendix III. to the Weekly Weather Report of the Meteorological Office for 1906.

Royal Observatory, Greenwich.—The averages for Temperature and Rainfall, with which the current values are compared, are for the 65 years 1841-1905. The averages for sunshine are for the period 1897-1906. The earth temperatures are taken at a depth of 3 ft. 2 in. The daily rainfall amounts are those for the 24 hours comprising the civil day. The numbers of days in each month of the quarter which were persistently overcast from midnight to midnight were 0, 0, 0, the number of persistently cloudless days were 0, 0, 0, the number of persistently foggy days were 0, 0, 0.

Mean Values for Districts.—The monthly mean values for districts for temperature, rainfall and sunshine are computed from the data for those stations which are included in the Weekly Weather Report of the Meteorological Office. The selection of stations is not identical with that included in this Report. The district values, as quoted, are comparable with the statistics published in previous issues of the Weekly Weather Report of which a Summary is in course of preparation. The averages with which the current district values are compared are for the 25 years 1881-1905. The district values for amount of cloud and earth temperatures are taken from the Monthly Weather Report of the Meteorological Office.

INDEX OF URBAN DISTRICTS.

As existing on 30th June, 1911, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of that Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,163 Urban Districts (including County, Municipal and Metropolitan Boroughs) 154 were each co-extensive, at the end of June, 1911, with one or more Registration Areas.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 251.] **Marriages**—April, May, June, 1911. [Price 9d.
Births and Deaths—July, August, September, 1911.

NOTE.—The figures in this publication are tabulated mainly from statistical Returns furnished by the local Registrars, and for this reason may not be found to correspond exactly with the authoritative figures for the whole year to be published later in the Annual Report.

*General Register Office, Somerset House,
26th October, 1911.*

Throughout this Return revised estimates of populations based upon the numbers enumerated in 1901 and 1911 have been substituted for the estimates shown in the Return for the first quarter of the year, which were based upon the numbers enumerated in 1891 and 1901, and all rates relating to periods before the 1st April, 1911, have been recalculated on revised estimates of population.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1911 is estimated at 45,311,078 persons; that of England and Wales at 36,168,750, that of Scotland at 4,766,860, and that of Ireland at 4,375,468. These estimates are based upon the numbers enumerated at the Censuses of 1901 and 1911.

In the United Kingdom 277,655 *births* and 173,105 *deaths* were registered in the three months ended 30th September 1911. The natural increase of population was, therefore, 104,550. The number of *persons married* in the quarter ended 30th June 1911 was 179,274.

The birth-rate in the United Kingdom in the *third* quarter of 1911 was 24·3, and the death-rate 15·2, per 1000 of the estimated population. The marriage-rate in the *second* quarter of 1911 was 15·9 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to a Return of the passenger movement between the United Kingdom and places out of Europe issued by the Board of Trade it appears that in the three months ended 30th September 1911 of the passengers stated to be of British nationality the departures

exceeded the arrivals by 80,676 persons, an increase of 9·5 per cent. as compared with the corresponding period of the previous year. English passengers leaving exceeded those arriving by 53,907, Welsh by 1,842, Scottish by 17,530, Irish by 5,403, and British Colonial passengers by 1,994. Of aliens those leaving exceeded those arriving by 14,039, the balance in the corresponding period of the previous year having been 30,441.

The passenger movement between the United Kingdom and the Continent of Europe showed, according to figures supplied by the Board of Trade, a balance inward of 6,995 persons in the third quarter of the year. A Return issued by the Home Office shows that the excess of aliens arriving from the Continent over those departing for the Continent in the third quarter was 12,779.

Thus the balance of the aggregate passenger movement in the quarter to and from all Countries was 60,902 outward.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,008 registration sub-districts of England and Wales in the three months ended 30th September 1911; and the MARRIAGES in 15,846 churches or chapels, in 15,922 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, in the three months ended 30th June 1911.

Marriages.

In the *second* quarter of 1911 the marriages of 151,032 persons were registered, being equal to an annual rate of 16·7 persons married per 1000 of the estimated population, against an average rate of 16·5 per 1000 in the second quarter of the ten years 1901-1910.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 13·0 in Norfolk, 13·1 in Buckinghamshire, 13·2 in Suffolk and in Carmarthenshire, and 13·4 in Carnarvonshire; the highest rates were 18·3 in Nottinghamshire, 18·4 in London, 18·5 in Warwickshire, 18·8 in Durham, 19·5 in Lincolnshire, and 19·6 in Leicestershire.

Births.

The births registered in the *third* quarter of 1911 numbered 222,601, and were in the proportion of 24·4 annually per 1000 of the population; this is 2·9 per 1000 below the mean birth-rate in the ten preceding third quarters, and is the lowest birth-rate recorded in any third quarter since the establishment of civil registration. In registration counties with populations exceeding 100,000 the lowest birth-rates during the quarter were 18·4 in Sussex, 20·0 in Northamptonshire, 20·1 in Berkshire, and 20·2 in Devonshire, in Somersetshire, and in Carnarvonshire; the highest rates were 26·7 in Northumberland, 26·8 in Carmarthenshire, 27·3 in Nottinghamshire, 27·7 in Staffordshire, 29·9 in Monmouthshire, 30·9 in Durham, and 31·7 in Glamorganshire.

In the 77 great towns the birth-rate averaged 25·5 per 1000, ranging from 15·8 in Bournemouth, 16·0 in Hastings, 17·9 in Hornsey, 18·3 in Halifax, 18·5 in Huddersfield, and 18·6 in Bradford, to 30·1 in Bootle, 31·3 in Stoke on Trent, 32·7 in Merthyr Tydfil, 34·7 in St. Helens, and 35·3 in Rhondda. In the 136 smaller towns the mean birth-rate was 23·6 per 1000, and in the remainder of England and Wales, excluding the 213 chief towns, it was also 23·6.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 81,645, against 123,300,

124,054 and 123,022 in the third quarters of 1908, 1909, and 1910, respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 30s. 5d., 30s. 4d., and 31s. 5d., respectively, in the preceding three quarters, was 31s. 11d. last quarter. The average wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:— of inferior beef, 3½d.; of prime beef, 7¾d.; of inferior mutton, 4½d.; of prime mutton, 7½d. Compared with the average prices in the preceding three months, the price of inferior beef showed a decrease of ½d., and that of prime beef a decrease of ¼d. The price of inferior mutton showed a decrease of ¼d., and that of prime mutton a decrease of ⅝d. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 16s. 3d. per ton, against 15s. 6d. per ton in the third quarter of 1910. The average price of Consols was 78l. 1s. 8d., having been 80l. 19s. 3d. in the preceding quarter. The minimum annual rate per cent. of discount charged by the Bank of England which had been reduced from 3l. 10s. to 3l. on the 9th March was raised to 4l. on 21st September. The average minimum rate during the quarter was 3l. 2s. 8d. per cent.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 634,793 exclusive of lunatics in county and borough asylums, registered hospitals and licensed houses, of casual paupers, of persons receiving out-door medical relief only, and of patients in the fever and small-pox hospitals of the Metropolitan Asylum District. Of these 634,793 persons, 254,632 received in-door, and 380,161 out-door, relief. The proportion of the population in receipt of poor-law relief was 17·6 per 1000, against 22·0 and 21·3 per 1000 respectively in the third quarters of 1909 and 1910.*

Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom, together with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 72-91.

Until very nearly the middle of September the weather of this period was exceptionally fine, warm and dry, with occasional spells of heat of almost tropical severity. Early in August the thermometer over a large portion of England rose to a higher level than at any time since the commencement of reliable temperature records, 50 or 60 years ago, and a month later, on September 8th, the shade readings were, in many places, the highest recorded at so late a period in the season. After about September 12th the fine, hot weather came to an end, and for the remainder of the period the conditions were of a cool, showery type.

July opened with a long spell of warmth and drought, most places in the southern parts of England and Wales reporting an entire absence of rain extending over at least three weeks. In many parts of South Wales and the south-west of England no rain fell for at least 28 days. Temperature was almost continuously above the normal, the warmest spells occurring on the 7th and 8th, between the 12th and 14th, and on the 21st and 22nd. On the first and

* The large reduction as compared with previous years is mainly due to the discontinuance after the 31st December, 1910, of the disqualification for old age pensions ensuing on the receipt of Poor Law Relief at any time since 1st January, 1903.

second of these occasions the thermometer rose to 85° and upwards in many parts of England, the readings on the 8th being as high as 90° at a few of the southern stations, and as high as 91° at Wilton, Salisbury. On the 21st and 22nd shade readings above 90° were recorded in several parts of the midland and south-eastern counties, the thermometer rising to 96° at Greenwich, and to 97° at Epsom. After the 24th of the month the weather became less settled, and on the 25th, 28th, and 29th severe thunderstorms occurred in many parts of the country; on the last mentioned date a sudden squall of wind, of a tornado like character, travelled rapidly from west to east across the southern parts of Wales and England. Great heat was again experienced about this time, the thermometer on the 29th exceeding 90° in several parts of England and Wales and touching 93° at Bath, Rugby, Epsom, and Matfield (Kent).

At the beginning of August heavy falls of rain occurred in some parts of Wales and the west of England, but in our southern and eastern counties a renewal of fine, dry weather was experienced, many places reporting an absence of rain lasting at least for 18 days. Temperature remained considerably above the average, and on the 9th the thermometer over England rose to a higher level than at any previous time on record. At a large number of stations the shade maxima exceeded 95° , and at the Royal Observatory, Greenwich, the thermometer touched 100° , the reading being 3° higher than the previous maximum registered since the establishment of regular meteorological observations in 1841. Four days later, on the 13th, shade readings slightly above 90° were again observed in a few isolated parts of the country. In the latter half of the month the conditions became less settled, with thunderstorms and heavy rain in many places on the 20th and 21st, and again on the 30th. Most districts experienced very long intervals of fine, bright weather, but in the closing week the air was much cooler than in the earlier part of the month.

The early days of September were marked by a renewal of high temperatures. On the 2nd the thermometer over our eastern, midland, and south-eastern counties again rose above 85° , a maximum of 90° being recorded at Camden Square, and at Cromer and Hillington, and a reading of 91° at East Ham. Still higher values were recorded on the 8th, when shade maxima of 90° and upwards were observed over a wide area, and a reading of 94° at Greenwich, Isleworth, and Raunds (Northampton). Thunderstorms occurred on the same day in several parts of England, and more generally on the 11th and 12th, the latter day being further marked by a very heavy fall of rain in Wales and the north-west of England. After the middle of September no shade temperature appreciably above 70° was recorded in any part of the United Kingdom, and, although the weather was often fine and sunny, the general conditions were showery and unsettled, with occasional frost at night. Quite at the close of the month a gale blew from the Northward or North-Westward in the rear of a cyclonic disturbance which passed across North Britain, the storm being of unusual severity on our east and south-east coasts, and, in fact, over the entire North Sea area.

The *mean temperature* of the quarter was considerably above the normal, the excess varying from about 3° in the northern districts (England North-East and North-West) to about $4\frac{1}{2}^{\circ}$ in the London district and in England East. The highest readings, which have been already quoted, occurred very commonly on August 9th. In the course of the quarter there were no fewer than seven occasions upon which the thermometer over a

considerable portion of England rose above 90°, the various dates affected being July 8th, July 21st and 22nd, July 29th, August 9th, August 13th, and September 8th. The lowest temperatures of the quarter occurred between September 21st and 23rd, when the thermometer in the screen fell slightly below the freezing point in many inland districts. Sharp ground frosts were experienced not only about this time, but also on September 15th and 16th.

The *rainfall* of the quarter was everywhere very deficient, and the number of days with a measurable quantity was also considerably below the average. In the wettest district, England North-West, the total fall amounted to only 82 per cent., and in England North-East and the English Channel to a trifle under 70 per cent. of the average. Most other districts experienced considerably less than half the normal quantity, the driest being England South-East, with only 41 per cent., and the London district, with only 45 per cent., of the average. Long periods of rainless weather occurred in July, and in the southern and eastern parts of England in the earlier parts of August and September. The heaviest rains of anything like a general character occurred respectively on August 2nd in Wales and some neighbouring portions of England, on August 20th and 21st over the southern parts of the country, and on September 12th in Wales and the north of England.

The duration of *bright sunshine* was largely in excess of the average, and was in nearly all districts the highest registered in a corresponding period of the year since the general establishment of recording instruments in 1881. In the least sunny parts of the country (as compared with the average), England North-East and the English Channel, the mean duration per day for the whole quarter was nearly 2 hours in excess of the normal, and in the sunniest districts, London and England South-East, it was more than 3 hours in excess. Over the United Kingdom generally the second week in July was the sunniest week on record, more than 70 per cent. of the possible duration being experienced in nearly all districts, more than 80 per cent. in England South-West, and as much as 85 per cent. in the English Channel.

Deaths.

The deaths registered in England and Wales last quarter numbered 140,956, and were in the proportion of 15·5 annually per 1000 persons living; this rate is 1·7 per 1000 above the mean rate in the ten preceding third quarters. In registration counties with populations exceeding 100,000, the death-rates ranged from 11·4 in Wiltshire, 11·7 in Somersetshire, 11·8 in Berkshire and in Hertfordshire, 11·9 in Shropshire, and 12·1 in Buckinghamshire, to 16·7 in the West Riding of Yorkshire, 17·5 in Glamorganshire, 17·6 in the East Riding of Yorkshire, 18·0 in Staffordshire, 18·5 in Lancashire, and 18·6 in Durham.

The 140,956 registered deaths included 73,878 of males and 67,078 of females, the death-rate among males being 16·8, and that among females 14·3 per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding third quarters, the death-rate of males showed an increase of 1·8, and that of females an increase of 1·6. Out of equal numbers living, the deaths of males were to those of females as 118 is to 100, and was equal to the mean proportion in the third quarters of the ten preceding years.

Urban and Rural Mortality.

In the 77 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1911 is estimated at more than sixteen millions, the death-rate calculated without reference to age and sex constitution of the populations was 16·6 per 1000 living; the rates in the three preceding third quarters in the great towns having been 13·9, 12·4, and 12·3. The crude rates in the several towns ranged from 9·3 in Hornsey, 9·9 in Kings Norton, 10·2 in Handsworth (Staffs.), 11·2 in Barrow in Furness, 11·3 in Bournemouth, and 11·4 in Leyton, to 20·4 in Wigan and in Hull, 20·5 in Bolton, 21·0 in St. Helens, 21·6 in Burnley, 22·6 in Liverpool, and 24·7 in Stoke on Trent.

In the 136 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at five millions in 1911, the crude death-rate was 15·0 per 1000 living; the rates in the three preceding third quarters in the group of smaller towns having been 12·0, 11·3, and 10·8.

In the remainder of England and Wales, with an aggregate population estimated at fifteen millions, of whom seven millions live in small towns and eight millions in rural districts, the crude death-rate was 14·5 per 1000 living; the rates in the three preceding third quarters having been 12·1, 11·2, and 11·0.

Crude death-rates, that is the proportions of deaths recorded to the estimated populations amongst which they occur, regardless of age and sex, are a fairly trustworthy test of relative mortality when the rates for short periods in the same area are compared; but when one area is compared with another, crude death-rates should be supplemented by rates in which the age and sex constitution of the respective populations is taken into account. The following statement shows the crude and corrected death-rates in each of the above areas. (See also Table III., page xv.)

Third Quarter, 1911.

—	Crude Death-rates.	Corrected Death-rates.
England and Wales	15·5	15·5
77 Great Towns	16·6	17·6
136 Smaller Towns	15·0	15·7
England and Wales, less the 213 Towns	14·5	13·6

It should moreover be stated that owing to the difficulty of distributing to their proper areas the deaths occurring in public institutions the death-rate in the rural area is probably somewhat overstated.

Mortality at Different Ages.

Of the 140,956 deaths registered in England and Wales last quarter, 44,818 were those of infants under one year of age, 63,835 those of persons aged between one year and sixty-five years, and 32,303 those of persons aged sixty-five years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 201 per 1000; this proportion was 60 per 1000 above the average in the ten preceding third quarters, and was higher than that recorded in any corresponding quarter since 1901 when the proportion was 208 per

1000. Among registration counties with populations exceeding 100,000, the lowest proportions were 68 in Herefordshire, 87 in Shropshire, 99 in Wiltshire, 115 in Somersetshire, 119 in Oxfordshire, and 120 in Suffolk. The highest proportions were 227 in Nottinghamshire, 232 in Staffordshire and in Durham, 233 in Monmouthshire, 240 in Glamorganshire, and 245 in Lancashire.

In the 77 great towns infantile mortality averaged 225 per 1000 births, being 24 per 1000 more than that in England and Wales as a whole. Among the several towns the lowest proportions were 104 in Handsworth (Staffs.), 124 in Barrow in Furness, 132 in Hornsey and in Coventry, 145 in Reading, and 149 in Brighton; the highest were 331 in Bolton, 339 in Aston Manor, 352 in Burnley, 365 in Wigan, and 374 in Stoke on Trent. Among the 136 smaller towns infantile mortality averaged 217 per 1000 births, ranging from 73 in Brighouse, 85 in Bacup, 91 in Erith and in Tunbridge Wells, 94 in Beckenham, and 96 in Nelson and in Rawtenstall, to 354 in Barking Town and in Barnsley, 356 in Ashton under Lyne, 357 in Aberdare, 382 in Ebbw Vale, 439 in Leigh (Lancs.), and 515 in Farnworth. Excluding these 213 towns, infantile mortality in the remainder of England and Wales was in the proportion of 169 per 1000 births.

The past quarter has afforded a severe test of the trustworthiness of the opinion that there has been a genuine reduction in infantile mortality during recent years; and comparison of the mortality now recorded with that in the corresponding quarters of each of the years 1870-1910 shows that there is a good foundation for this belief. Notwithstanding the abnormal meteorological conditions which prevailed and the disturbance of the milk supply by the railway strike during the period of maximum seasonal mortality from diarrhoea, the infantile mortality last quarter in London was lower than that in the corresponding period of eighteen out of the forty-one preceding years, while in the group of great towns it was lower than that in nineteen out of these forty-one years.

Comparison of the infantile mortality in England and Wales as a whole over the same period shows that there were only five years in which the rate of last quarter was exceeded. It should be borne in mind, however, that the country thirty or forty years ago was much more extensively rural in character than it is now, and that a more legitimate comparison is to be found, therefore, in a survey limited to large urban areas throughout.

The mortality in England and Wales among persons aged between one year and sixty-five years was at the annual rate of 7·5 per 1000 of the estimated population at this group of ages. In the 77 great towns the mean mortality at this age-group was 8·2 per 1000, the death-rates ranging from 4·2 in Kings Norton, 4·6 in Hastings, 5·0 in Hornsey, 5·1 in Leyton and in Handsworth (Staffs.), and 5·2 in Bourne-mouth, to 10·1 in Walsall and in Wigan, 10·4 in St. Helens, 10·5 in Sunderland, 10·6 in Stoke on Trent and in Wolverhampton, and 12·7 in Liverpool. In the 136 smaller towns the mortality at this age-group averaged 7·0 per 1000.

Among persons aged sixty-five years and upwards the mortality was at the annual rate of 75·9 per 1000 of the estimated population at this group of ages. In the 77 great towns the mean mortality at this age-group was 83·4 per 1000; the lowest rates were 57·7 in Ipswich and in Kings Norton, 59·3 in York, 59·4 in Hornsey, 60·2 in Norwich, 61·7 in Coventry, and 62·3 in Swansea; the highest rates were 120·6 in Bootle, 123·4 in Burnley, 126·9 in West Hartlepool, 127·7 in Bury, 129·0 in Dewsbury, and 129·1 in Bolton. In the 136 smaller towns the rate averaged 80·3 per 1000.

Mortality from certain Epidemic Diseases.

The 140,956 deaths from all causes include—

31,785 that were attributed to diarrhoea and enteritis
(under 2 years),

1,536	”	”	whooping-cough,
1,415	”	”	measles,
987	”	”	diphtheria,
679	”	”	enteric fever,
400	”	”	scarlet fever,
5	”	”	small-pox,
1	”	”	typhus,
1	”	”	pyrexia of uncertain origin.

Thus, to the above-mentioned epidemic diseases in the aggregate, 36,809 deaths were referred last quarter.

The average mortality from diarrhoea and enteritis under 2 years of age, typhus, and pyrexia of uncertain origin, is not available for comparison; the rates for each of the other diseases were below the decennial average.

Diarrhoea and enteritis (under 2 years) was the assigned cause of 31,785 deaths last quarter, corresponding to an annual rate of 3·49 per 1000 of the population at all ages. Among counties with populations exceeding 100,000 persons, the lowest death-rates were 0·42 in Herefordshire, 0·67 in Salop, 0·84 in Carnarvonshire, and 0·91 in Wiltshire; the highest rates were 4·28 in Nottinghamshire, 4·60 in the East Riding of Yorkshire, 4·62 in Staffordshire, 4·85 in Lancashire, 4·99 in Durham, and 5·33 in Glamorganshire. In the 77 great towns the average death-rate from these causes (under 2 years) was equal to 4·35 per 1000 of the population at all ages. Among these towns the lowest death-rates were 1·46 in Hornsey, 1·51 in Handsworth (Staffs.), 1·69 in Barrow in Furness, 1·76 in Reading, 1·82 in Halifax, and 1·88 in Bournemouth; the highest rates were 7·33 in Grimsby and in St. Helens, 7·38 in Aston Manor, 7·41 in Wigan, 7·46 in Rhondda, 7·49 in Burnley, and 8·70 in Stoke on Trent. In the 136 smaller towns the average death-rate was 3·81 per 1000, the mortality being highest in Abertillery, Aberdare, Barking Town, Barnsley, Farnworth, Leigh (Lancs.), and Widnes. In the remainder of England and Wales the death-rate averaged 2·47 per 1000. In accordance with precedent special tables relating to summer mortality from diarrhoea and enteritis have been inserted in the present Return (*see* Tables XIII. and XIV.).

Whooping-cough accounted last quarter for 1,536 deaths, and for a death-rate of 0·17 per 1000 annually, which is below the average rate in the ten previous corresponding quarters by 0·04 per 1000. In six counties no death from whooping-cough was registered last quarter, and the death-rate did not exceed 0·03 per 1000 in Devonshire. Among counties with populations exceeding 100,000, the highest death-rates from this cause were 0·27 in Suffolk, 0·30 in the East Riding and in the North Riding of Yorkshire, 0·38 in Denbighshire, 0·39 in Northumberland, and 0·41 in Durham. In the 77 great towns whooping-cough caused an average death-rate of 0·18 per 1000 living. No deaths from this disease occurred in ten of these towns; but the rate was equal to 0·42 in Hull, 0·54 in Stockton on Tees, 0·55 in Cardiff, 0·57 in Walsall, 0·69 in West Hartlepool, and 1·03 in Sunderland. In the 136 smaller towns the average death-rate from whooping-cough was 0·13 per 1000, the mortality being highest in Gillingham, Lowestoft, Ince in Makerfield, Abertillery, Aldershot, and Wallsend. In the remainder of

England and Wales whooping-cough caused an average mortality of 0·17 per 1000 annually.

Measles was returned as the cause of 1,415 deaths last quarter, corresponding to an annual rate of 0·16 per 1000 of the population, or 0·05 per 1000 below the average in the third quarters of the preceding ten years. Of the 55 registration counties, ten were free from measles mortality, and the death-rate did not exceed 0·02 per 1000 either in Northamptonshire or in Somersetshire. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·25 in Durham, 0·26 in Oxfordshire, 0·31 in Cambridgeshire, 0·36 in Dorsetshire, and 0·55 in Staffordshire. In the 77 great towns measles caused an average mortality of 0·15 per 1000. In nineteen of these towns no deaths from this disease were registered. The highest death-rates were 0·42 in Salford, 0·43 in Nottingham, 0·46 in Bootle, 0·53 in West Bromwich, 0·57 in Great Yarmouth, 0·73 in Bolton, and 1·39 in Wolverhampton. In the 136 smaller towns, the average death-rate was 0·20 per 1000 living, the highest mortality among these towns being in Chorley, Doncaster, Poole, Dudley, Wednesbury, and Oldbury. In the remainder of England and Wales the average measles death-rate was 0·14 per 1000.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 987 deaths, a number corresponding to an annual rate of 0·11 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·03 per 1000. In four of the registration counties no deaths from this disease occurred last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·15 in Northumberland, 0·16 in Hampshire, 0·17 in Staffordshire, 0·23 in Cornwall, and 0·29 in Denbighshire. The average death-rate from diphtheria in the 77 great towns was equal to 0·12 per 1000 of their aggregate population. Fourteen of the towns were free from diphtheria mortality. The highest death-rates were 0·35 in Portsmouth, 0·36 in Blackburn and in Halifax, 0·38 in Swansea, and 0·41 in Stoke on Trent. In the 136 smaller towns the mortality from this disease averaged 0·10 per 1000, the rate being highest in Poole, Cambridge, Shipley, Hindley, and Tunbridge Wells. In the remainder of England and Wales diphtheria caused an average mortality of 0·10 per 1000 living.

Enteric fever.—As in previous returns deaths from *enteric fever* have been tabulated in the present return separately from those due to *typhus*, or to *pyrexia* of uncertain origin. They numbered 679, equal to a rate of 0·07 per 1000. The inclusion of 1 death from typhus and 1 from pyrexia would not alter this rate, which is 0·02 per 1000 below the average death-rate from "*fever*" in the third quarters of the previous ten years. In eleven counties no deaths from enteric fever were returned last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·11 in Lancashire and in Northumberland, 0·12 in Bedfordshire, 0·14 in Durham, 0·15 in the West Riding, 0·16 in the North Riding, and 0·21 in the East Riding of Yorkshire. In the 77 great towns enteric fever caused an average mortality of 0·07 per 1000 annually. In twenty-four of these great towns no deaths from enteric fever occurred, and only one death each in sixteen towns. The highest enteric fever death-rates were 0·23 in Rhondda, 0·29 in St. Helens and in Hull, 0·37 in Grimsby, 0·38 in Dewsbury, and 0·45 in Wigan. In the 136 smaller towns enteric fever caused an average mortality of 0·07 per 1000 annually, the rate being highest in Barnsley, Luton, Barking Town, Farnworth, Morley, and Widnes. In the remainder

of England and Wales the death-rate from enteric fever averaged 0·08 per 1000.

Scarlet fever accounted last quarter for the deaths of 400 persons, equal to a rate of 0·04 per 1000 living, or 0·05 per 1000 less than the decennial average rate for the third quarter. Eighteen of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·07 in Lancashire and in Glamorganshire, 0·10 in Leicestershire, 0·12 in Staffordshire, and 0·14 in Warwickshire. In the 77 great towns scarlet fever accounted for an average mortality of 0·05 per 1000 annually. No deaths from this disease were recorded in twenty-eight of these towns. The highest scarlet fever death-rates were 0·20 in Norwich and in Stoke on Trent, 0·21 in Aston Manor, 0·27 in Preston, and 0·37 in Coventry. In the 136 smaller towns the average death-rate from scarlet fever was 0·05 per 1000 living, the highest mortality being in Darlington and in Chorley. In the remainder of England and Wales this disease caused an average death-rate of 0·03 per 1000 living.

Five deaths from *small-pox* were registered last quarter in England and Wales, the numbers in the four quarters immediately preceding having been 1, 2, 9, and 9, respectively.

Violent Deaths.

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 5,425 last quarter, and corresponded to an annual rate of 0·60 per 1000 of the population, which is 0·04 per 1000 above the average in the ten preceding third quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·38 in Northamptonshire, 0·39 in Middlesex, 0·42 in Carnarvonshire, 0·43 in Berkshire, 0·44 in Leicestershire, and 0·45 in Essex; the highest rates were 0·70 in Herefordshire, 0·72 in Denbighshire, 0·76 in Durham and in Monmouthshire, 0·83 in Glamorganshire, and 1·05 in Carmarthenshire. In the 77 great towns the mean rate was 0·55 per 1000 living. Among the several towns the rate was only 0·05 in Bournemouth, 0·17 in Smethwick, 0·18 in Northampton, 0·19 in Barrow in Furness, and 0·20 in Halifax; but it rose to 0·82 in West Hartlepool and in Tynemouth, 0·84 in Merthyr Tydfil, 0·87 in Burnley and in Sunderland, and 1·00 in Great Yarmouth.

Certification of Causes of Death.

Of the 140,956 deaths registered in England and Wales last quarter, the causes of 130,207, or 92·4 per cent., were certified by registered medical practitioners, and the causes of 9,212, or 6·5 per cent., by coroners, after inquest, whilst the causes of the remaining 1,537, or 1·1 per cent., were not certified, the average percentage of uncertified deaths in the ten preceding third quarters having been 1·4. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Hampshire, Middlesex, Oxfordshire, Wiltshire, Devonshire, Cornwall, Somersetshire, Gloucestershire, Cheshire, the West, East, and North Ridings of Yorkshire, Monmouthshire, and Glamorganshire, but it reached 2·3 in Warwickshire and in Derbyshire, 2·4 in Berkshire, 2·6 in Durham, and 2·9 in Shropshire and in Cumberland. In the 77 great towns the mean proportion of uncertified deaths was 0·6 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, Leyton, Hastings, Brighton, Southampton, Ipswich, Great Yarmouth, Norwich, Plymouth, Devonport, Bristol, Wolverhampton, Walsall, Smethwick,

Derby, Wigan, Dewsbury, York, Stockton on Tees, West Hartlepool, or Newport (Mon.), the proportion per cent. rose to 2·6 in St. Helens, 2·7 in Coventry, 2·8 in Barrow in Furness, 2·9 in Birmingham and in Gateshead, and 4·0 in Reading.

Inquests.

Inquests were held in England and Wales concerning 9,212, or 6·5 per cent., of the total deaths, the mean proportion in the ten preceding third quarters having been 7·0 per cent. In the 77 great towns the proportion of inquest cases averaged 6·7 per cent., ranging from 2·1 in Smethwick, 2·2 in Barrow in Furness, 2·8 in Northampton, 3·2 in Bournemouth, and 3·3 in Rochdale and in Preston, to 9·1 in London and in Hornsey, 9·2 in Brighton, 9·6 in Walthamstow, 9·8 in Tottenham, and 10·9 in Great Yarmouth.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 26,171 or 18·6 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding third quarters having been 17·6 per cent. In the 77 great towns the deaths in public institutions averaged 25·1 per cent. of the total deaths, the lowest percentages in the several towns being 3·2 in Rhondda, 6·6 in Smethwick, 8·0 in Handsworth (Staffs.), and 9·4 in West Hartlepool; the highest percentages were 29·9 in Walthamstow, 30·0 in Liverpool, 30·1 in Leyton, and 41·3 in London.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual rates of birth and death per 1000 living in these towns last quarter were as follows:—

	Birth-rate.	Death-rate.
Edinburgh	20·4	14·2
Glasgow	26·6	16·2
Dublin (Registration Area)	28·0	21·5
Belfast	28·5	16·9

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 29 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the 13 weeks ended 30th September, 1911 (Table XV.). Excluding the Indian and Egyptian cities, the highest and lowest annual rates of birth and death during the third quarter of 1911 were as follows:—

BIRTH-RATES.

	Highest per 1000 living.		Lowest per 1000 living.
Bucarest	31·6	Brussels	16·3
Trieste	28·8	Paris	16·8
Breslau	27·2	Prague	16·8
New York	27·1	Vienna	19·0
Cologne	26·3	Antwerp	19·3
Budapest	25·0	Berlin	19·9
London ...		24·9	

DEATH-RATES.

—				Highest per 1000 living.	—				Lowest per 1000 living.
Moscow	31·0	Amsterdam	11·5
Cologne	25·6	Stockholm	11·8
Bucarest	26·6	Christiania	12·8
Trieste	25·1	Frankfort on Main	13·3
Leipzig	23·7	Chicago	13·7
Breslau	22·3	Brussels	14·2
London				...	15·5				

Small-pox caused 36 deaths in Moscow, 13 in St. Petersburg, and 1 in Rio de Janeiro.

The mortality from *enteric fever* was highest in New Orleans, St. Petersburg, Trieste, and Budapest; from *measles* in St. Petersburg, Moscow, Cologne, Budapest, and Paris; from *scarlet fever* in Bucarest, Budapest, Moscow, and Hamburg; from *whooping-cough* in Cologne, Copenhagen, New Orleans, and Leipzig; and from *diphtheria* and *croup* in Hamburg, Bucarest, Moscow, Berlin, and Chicago.

Infantile Mortality.—Among those European cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 76 in Stockholm, 125 in Amsterdam, 136 in Copenhagen, and 141 in Christiania, to 307 in Trieste, 324 in Antwerp, 328 in Breslau, 527 in Cologne, and 561 in Leipzig. In London the proportion was 203 per 1000 births.

INDIAN CITIES.—The death-rate was equal to 23·3 per 1000 in Calcutta, 29·2 in Bombay, and 31·1 in Madras. *Small-pox* caused 44 deaths in Bombay, and 41 in Madras; *measles* caused 24 deaths in Madras, and 14 in Bombay; *plague* caused 235 deaths in Bombay, and 174 in Calcutta; and *Asiatic cholera* caused 179 deaths in Calcutta, 30 in Bombay, and 14 in Madras.

 RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the 13 weeks ended 30th September, 1911 (*see* pages xxvii—xxxii); and in the two following tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in **England and Wales** in the Years **1901-1911**, and in each Quarter of those Years.

YEAR - - -	1901	1902	1903	1904	1905	1906	1907	1908	1909	1910	1911
Marriages- - -	259,400	261,750	261,103	257,856	260,742	270,038	276,421	264,940	260,544	267,416	—

TABLE V.—77 Great Towns.—Population; Births, Deaths, and Meteorology in the 13 Weeks ended 30th September, 1911.

NOTE.—The 77 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-residents, and (2) by including the deaths of London residents occurring in the Metropolitan Outer Ring or in Metropolitan Public Institutions situated outside the County. (See also Table XII.) The deaths in the other towns have been corrected, as far as possible, (1) by the exclusion of all deaths of non-residents, and (2) by the inclusion of deaths in certain outlying public institutions. With regard to the Outer Ring and its constituent areas, however, correction is more complete, a distribution of all transferable deaths occurring in any part of Greater London having been made.

* Rate calculated upon the population at all ages.

TABLE VII.—One hundred and thirty-six Smaller Towns.—Population; Births and Deaths in the QUARTER ended 30th September, 1911.

NOTE.—The 136 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected as far as possible, (1) by the exclusion of all deaths of non-residents, and (2) by the inclusion of deaths of residents in certain outlying institutions. With regard to towns in the Outer Ring, however, correction is more complete, a distribution of all transferable deaths occurring in any part of Greater London having been made.

TOWNS.	Cols.	ESTIMATED POPULATION IN THE MIDDLE OF 1911.*	BIRTHS.	DEATHS.	The DEATHS registered in the Quarter include																	Deaths under 1 year to 1000 Births.	TOWNS.

* This table is supplied by the Medical Officer of Health of the Administrative County of London, and is compiled from returns which the London County Council receives from the Metropolitan Asylums Board under section 55 (4) of the Public Health (London) Act, 1891.

† The notification of Ophthalmia Neonatorum and Poliomyelitis was made compulsory in the Administrative County of London on the 13th March and 1st September, 1911, respectively.

‡ This was subsequently found not to be small-pox.

§ These were found not to be Cholera Asiatica.

TABLE X.—PROPORTION to POPULATION of CASES of INFECTIOUS DISEASE NOTIFIED in certain LARGE TOWNS of ENGLAND and WALES during the 13 Weeks ended 30th September, 1911.

* The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note.^b

^b For London the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar-General.

The Registration Sub-districts (2008 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital; and L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

See page 2, note ^a.

^c See page 6, note ^b.

* 1, 2, 3.—On the 1st September, 1911, the boundary between these sub-districts was altered, see page 70. The births and deaths for Barnwood (1) are shown as if the change had taken place at the beginning of the quarter. For Gloucester Northern (2) and Gloucester Southern (3) the births and deaths cannot be shown separately.

* 435 : 1, 2, 3.—On the 1st September, 1911, Osmaston (1) and Derby (2) sub-districts were abolished and their constituent parts divided into three sub-districts, viz. Derby South (1), Derby Central (2) and Derby North (3), see pages 70 and 71.

The births and deaths for the new sub-districts cannot be shown separately.

* 439 : 2.—The 3 deaths from diphtheria occurred in the parish of Winstler during the month of September.

VIII.—NORTH WESTERN COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

Registration Sub-districts.	Area in Statute Acres.	Enumerated Population, 1911. (Unrevised.)	Births Registered in the Quarter ended 30 Sept. 1911.	Deaths Registered in the Quarter ended 30 Sept. 1911.	The DEATHS in the Quarter are stated by the Registrars to include													
					Average in Quar- ters ended 30 Sept. in the 3 Years 1908-10.	Registered in the Quarter ended 30 Sept. 1911.	Deaths from											
							Deaths of Infants under 1 Year of Age. Persons aged 15 Years & upwards. Enteric (or Typhoid) Fever. Small-pox. Measles. Scarlet Fever. Whooping- cough. Diphtheria. Diarrhoea & En- teritis (under 2 years). Violence.	Inquest Cases	Deaths in Public Institutions.	Unclassified Causes of Deaths.

^a 488 : 8, 9.—On 1st August, 1911, Knott Lanes (1) sub-district was abolished and its constituent parts divided between Mossley (8) and Lees (9) new sub-district, see page 71. The births and deaths are shown as if the change had taken place at the beginning of the quarter. The order of the sub-districts has been altered.

^a 482 : 7.—The 5 deaths from measles occurred in Whitefield Urban District.

VIII.—NORTH WESTERN COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

Registration Sub-districts.		Area in Statute Acres.	Enumerated Population, 1911. (Unrevised.)	Births Registered in the Quarter ended 30 Sept. 1911.	Deaths Registered in the Quarter ended 30 Sept. 1911.	The DEATHS in the Quarter are stated by the Registrars to include												
						Average in Quarters ended 30 Sept. in the 3 Years 1908-10.	Deaths of	Deaths from

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING
THE QUARTER ENDED SEPTEMBER 30TH, 1911.

EXTRACTED FROM THE

MONTHLY WEATHER REPORTS

OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 222 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 57
STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

JULY, 1911.

Pressure, Winds and Weather.—In its general features the distribution of atmospheric pressure during the month of July was similar in character to that of June, the two months being almost equally divided between two main types—anticyclonic and cyclonic. The unsettled conditions which had ruled through the second half of June came to an end practically on the opening day of July, when the last of the series of depressions was travelling away across northern Scandinavia. On this day the barometer stood as low as 29·42 in. in Shetland, and this proved to be the lowest reading in the British Isles throughout the month. A steady increase of pressure was then in progress, under the influence of an anticyclone which was spreading in from the Atlantic, and by the evening of the 2nd the system embraced the whole country. Thenceforward, until the close of the 16th, the region of highest pressure maintained its position either over these islands or in their immediate neighbourhood, such depressions as were indicated within the area under observation, keeping well beyond the Arctic Circle or over northern Russia. As early as the 4th the barometer had passed above 30·5 in. at our Channel stations, but the anticyclone did not attain its maximum intensity until a week later, the readings at many stations on the 10th and 11th being above 30·6 in., the highest record, 30·66 in., occurring at North Shields. At this time the central space occupied the northern half of Britain. Slowly the system diminished in intensity, and as slowly drifted out to the Atlantic again, so that by the morning of the 17th it was situated well beyond our south-western coasts. This change of position rendered it possible for a depression, which had made its appearance at some distance to the westward of Iceland on the previous day, to advance to the neighbourhood of Cape Wrath, and eastward beyond the north-east of Scotland. The barometer dropped below 29·5 in. in the extreme north, and less settled conditions became general over the northern and north-western districts. This system was short-lived, dispersing in the course of the 18th, but thenceforward, until the close of the month, the conditions in the far western and northern districts were influenced mainly by three depressions which had their centres out at sea, the first moving slowly on a very erratic path beyond our north-western coasts for nearly a week; the second following a fairly steady course northward near the western coasts; and the third slow moving on an irregular path off the south-west of Ireland. During this more disturbed period in Ireland and Scotland the pressure distribution over England was on several days anticyclonic, the centres of the

systems being found on the Continent, moving eastward from Spain or the Bay of Biscay.

Under these circumstances the mean barometric values for the month show the region of highest pressure, exceeding 30·15 in., to have been over the western portion of the Continent and nearly the whole of England, the values at Bath and Brest being a trifle short of 30·2 in. Northward the means diminished to below 29·95 in. along a belt extending from the south-west of Iceland to northern Scandinavia. Everywhere there was a marked excess of pressure, of 0·13 in. at Dungeness, and 0·15 in. at Jersey, increasing to 0·21 in. at Liverpool, Spurn Head, Leith and Lerwick, and 0·22 in. at Shields. The range of pressure for the month was 1·2 in. in the north of Scotland, against 0·7 in. at Jersey. The mean gradient was slight, and the winds were mainly Southerly to Westerly in the west and north, but very variable over southern England and the Channel.

The month was unusually free from weather of a boisterous character, even the force of a strong breeze being uncommon at the telegraphic reporting stations, although at Malin Head the strength of a gale was registered on the 22nd-23rd and on the 30th. The anemometrical records show similar results. Even in gusts of short duration, velocities at the rate of 30 miles an hour and upwards were rare. On the 29th, however, various districts in the southern half of England experienced a remarkably sudden and violent squall. It was, perhaps, related more directly to the thunderstorm then in progress, than to the shallow depression which was centred beyond our south-western coasts. Rapid oscillations of the barometer marked the progress of the line-squall from the south-west towards the north-east, the direction of the wind in the squall being South or South-East. Penzance was struck by a heavy squall at 2·15 p.m.; the pressure tube anemometer at Pendennis Castle registered a rise from 0 to 61 miles per hour at 2·35, then back to zero; ten minutes later, at Lostwithiel (Cornwall), the wind rose suddenly from a dead calm to the force of a hurricane, which lasted about half an hour, a remarkable rise and fall of the tide in the River Fowey being noted. This sea disturbance was observed later at Salcombe, Teignmouth, and as far east as the Downs. The squall reached Guernsey at 3 p.m., the wind increasing suddenly from 0 to 45 miles per hour. Swansea was visited by swirling gusts from 4·30 to 5·30, the counties on both sides of the Severn estuary experiencing a furious Southerly blast laden with dust, attended by the darkness of night. Abergavenny and Southampton had the squall at 6 p.m., a violent wind storm, driving clouds of dense smoke before it at the former station, a gusty strong wind at the latter. At 6·10 p.m. Brighton had a thunder squall of 57 miles per hour; at 6·35 Watergate, Sussex, had "an extraordinarily severe squall"; and from 6·35 to 6·45 Basingstoke a terrific wind and dust storm. A series of sharp squalls set in at Kew Observatory at 6·45, and ended at 7·10, a maximum of 41 miles per hour occurring at 6·58. At Dwyran (Anglesey), a squall at the rate of 46 miles an hour was registered at 7·15, while Shoburyness had one of 41 miles at 7·55, and Dover a violent dust squall of 40 miles at 8 p.m. The squall thus passed along the south coast, from Penzance to Dover, at a rate of 49 miles an hour.

As a whole the month was exceptionally fine, dry, bright and hot over the greater part of the kingdom, and especially so over England. At several places in the south of England and of Ireland a long spell of dry weather set in on June 30th, and by July 5th the drought had become established over an extensive region. Stations with 25 to 27 rainless days are far too numerous to be mentioned here. The duration of the drought was 28 days, or four complete weeks, at Bucklebury, Wilton (Wilts.), Stockbridge (Hants.), Bournemouth, Salcombe, Dursley (Glos.), Newport, Yn's-y-fro, Pant-yr-Eos, Newchurch, Abergavenny (Mon.) and Cardiff: 29 days at Weymouth, Portland Bill, Teignmouth, Torquay and Fowey; 31 days at Bath. All these stations are in the south-western counties. South of a line drawn from Cromer to Fishguard nearly every station was rainless for three weeks.

The combination of calm, drought and brilliant sunshine was conducive to exceptional warmth. At the start temperature was low, below 60° in many localities in the first three days, 55° and under in places, but thenceforward high maxima ruled, exceeding 80° frequently, touching 90° at Epsom, and 91° at Wilton as early as the 8th. After the 20th these records were passed at many stations, 93° at Raunds on the 21st, and at Bath, Rugby, Epsom and Matfield (Kent) on the 29th, while on the 22nd Margate mounted to 94°, Greenwich to 96°, and Epsom to 97°. Some of the nights were very warm also, a minimum of 67° at Hawarden Bridge on the morning of the 13th, and at Jersey, Westminster and Manchester on the 29th. At Balmoral there was a shade minimum of 32° on the morning of the 20th.

Down till the 24th the thunderstorms of the month were unimportant, afterwards they became widespread and heavy, but not producing much rain, excepting over very restricted areas. At Huddersfield a thundershower on the 25th yielded 0·20 in. of rain in 3 minutes; in a violent storm over London on the 28th 0·75 in. of rain fell in 10 minutes at Camden Square, and 1·1 in. in 15 minutes at South Kensington. The thunderstorm of the 29th was the most extensive of the month, abnormally

violent in Ireland, 1·21 in. of rain falling at Dublin in 65 minutes, and 2·21 in. at Kilkenny in 2½ hours, the rainfall being very heavy generally over the southern half of Ireland.

Fog was of rare occurrence along the English Channel, while on our western and eastern coasts it was reported almost daily, most frequently round Ireland.

The temperature of the coastal waters was higher than in June, by as much as 5° in the south-east, between Eastbourne and the Shipwash, but with the exception of the north-west and north of Ireland and the Minch the water was colder than the air on shore, by 5° or 6° in many localities, and by 7° on the coast of Berwick.

Rainfall.—With the exception of a few stations in Scotland and Ireland there was a general deficiency of precipitation, and as a rule the deficiency was very large. Kilkenny received a total of 4·9 in., or 183 per cent. of the average, Stornoway 5·3 in., or 175 per cent., and Loch Torridon (Ross) 8·5 in., or 158 per cent., but in numerous localities the aggregates were only a fraction of the normal, a considerable number of stations returning less than 0·25 in., Cardiff, Shaftesbury, Portland Bill, Nottingham, Wilton, Clifton, Swarraton, and Cirencester gave from 4 per cent. to 1 per cent. of their usual quantities, while Bath had none at all. Rain was measured on 24 days at Inverary, Quinish (Mull) and Loch Torridon, but at scores of places on less than five days—even those returning one day only are too numerous to mention.

Bright Sunshine.—There was everywhere a large excess of insolation. The smallest aggregate for the month, 139 hours at Fort Augustus, was 139 per cent. of the average. In southern England the excess was very striking, averaging about 5 hours a day more than usual at some stations. Eastbourne and Hastings had 160 per cent. of the average, Greenwich and Kew Observatories 161, Brighton 163, Plymouth 169, Torquay 172, and Tunbridge Wells 180 per cent.

AUGUST, 1911.

Pressure, Winds and Weather.—During the period to which this summary relates the distribution of atmospheric pressure over the United Kingdom and the surrounding regions was somewhat more variable than was the case in June and July, each of these two months being almost equally divided between comparatively simple anticyclonic and cyclonic systems. August, however, admits of being separated into four fairly well-defined pressure types. The combination of land observations on both sides of the Atlantic and wireless reports from vessels out on the ocean showed that the first ten days of the month had a distinct prevalence of anticyclonic conditions extending from the Eastern States eastward along the middle latitudes of the Atlantic, and thence away to Eastern and North-eastern Europe. The minor systems which made up this great belt varied a little in shape and position from day to day, but their changes of intensity were unimportant. To the northward of the high belt lay a well-developed area of low pressure, whose movements in any direction were so slight that the system may be regarded as practically stationary over the upper part of the ocean, with its central space situated between our north-western coasts and southern or South-western Ireland. From this it will be seen that the British Isles occupied an intermediate position between the high and the low pressure systems. The depression does not appear to have been of any great depth, 29½ in. in 55° N., 25° W. on the 1st being the lowest barometer reading reported. By the 10th the pressure at the centre had increased to nearly 30 in., the system was dispersing over Iceland, and on the 11th the anticyclone previously over North-eastern Europe took up a position over the British Isles and the regions to the northward, and in the next four days the highest pressure during the month, nearly 30½ in., was attained—at stations in Scotland, Norway and Iceland. After the 15th the system diminished in intensity and in extent as it moved slowly southward across the British Isles to France by the 18th. Another change in the pressure distribution now took place. In addition to the anticyclone near the Azores there was an area of relatively high barometer readings about the Arctic Circle, and the conditions had thus become favourable to the advance of disturbances from the Atlantic to the British Isles, the Bay of Biscay, and the Continent. This type was maintained until the 23rd, and on the following day the distribution of pressure reverted to something like what it had been from the 1st to the 10th. The barometer again stood relatively high along the middle latitudes of the Atlantic and across Europe, and low to the northward, but instead of a stationary depression between our north-western coasts and Iceland, the closing week witnessed a succession of disturbances, following each other quickly across the ocean, bearing away on a north-easterly course close to the Farøe, and disappearing beyond the Arctic Circle. As a rule these disturbances were not of much depth, but on the closing day as the centre of one passed across Iceland, the barometer fell very rapidly to 28½ in., then rose as quickly as the system crossed the Arctic Circle.

The mean distribution of pressure for the whole month was consequently more nearly allied to the conditions experienced during the very similar first and last periods, high on the Continent, and low out on the upper Atlantic. The mean barometric values ranged from above 30·05 in. across the north of France, and 30·04 in. at Jersey to 29·88 in. at Blacksod Point, and 29·83 in. in the south-west of Iceland. Over the south-west quarter of Ireland the values were a trifle below the normal, but over the rest of the United Kingdom they were in excess, to the extent of 0·1 in. at Aberdeen, Leith and Shields, and 0·12 in. in Shetland. The gradient, usually about Westerly to South-Westerly, was thus South-Westerly to Southerly, and the winds experienced were in accordance with the pressure results, but with four different types of pressure during the month there was a fair proportion of breezes from other directions. The absolute range of pressure for the month did not differ materially from what is usual at this season—about an inch in the extreme north-west and north, and less than $\frac{1}{2}$ in. over England and Southern Ireland.

— Although the month as a whole was rather more breezy than June and July, winds exceeding the force of a strong breeze were uncommon, and in nearly every instance the highest forces occurred at the more exposed situations in the west and north, and were from some Southerly point. While the depression of the first part of the month remained outside our north-western coasts, a strong gale was felt at Malin Head early in the morning of the 1st, and in the following night gale force was reached at Blacksod Point and Malin Head. The anemometrical records showed that on the 2nd there was a gust at the rate of 52 miles per hour at Quilly, and of 57 miles at Roche's Point, the only instances during the month of gusts exceeding 45 miles. Between the 7th and the 12th a high wind was reported at a few places, and it was not until the 31st that a higher force was attained, the passage of a very deep depression across Iceland being marked by a gale at Blacksod Point, Stornoway and Lerwick, and a strong gale at Malin Head. Out on the Atlantic also many ships encountered a gale on this day.

Weather as remarkable as that of July was again experienced, drought, large records of bright sunshine, and exceptionally high temperatures forming the most striking features of the month, and rendered more striking by their forming a continuation of such unusual weather through a period of many weeks. Our more western and northern districts being influenced in the main by the various disturbances which appeared on the Atlantic, had much more changeable weather than Southern, Central and Eastern England, affected by the Continental anticyclones. Early in the month there were some heavy rainstorms, the largest falls on the 2nd being 1·2 in. at Caragh Lake, and 1·3 in. at Sheepstor; on the 4th, 1·5 in. at Bettws-y-Coed and Graythwaite, 1·8 in. at Bethesda, and 2·5 in. at Seathwaite; and on the 5th, 1·4 in. at Darwen and Liverpool. As early as the 2nd, however, a spell of very dry weather set in over the southern and eastern counties, and at scores of stations the drought was maintained for a fortnight or more, many places having no rain on as many as 18 consecutive days, Barnet on 19 days. Then on the 20th small irregularities of pressure brought the atmosphere into an electrical state over the country generally, there were numerous reports of thunderstorms, and considerable rains, on two days, 1·4 in. at Ruthin and Bexhill-on-Sea on the 20th; and 1·4 in. at Portsmouth, Wilton (Wilts.) and Hereford, and 1·5 in. at Bromyard and Llandrindod Wells on the 21st. These changeable conditions were maintained through the remainder of the month, with thunder and lightning here and there daily, and occasional heavy local rainfalls. The deep disturbance of the 31st produced a very heavy rainstorm in Western Scotland, 1·8 in. at Fort William and Ford (Argyll), 2·3 in. at Cruachan, and 2·5 in. at Inverary.

The heat of the month was without precedent in the records of the country. Maximum temperatures well above 80° were registered in Scotland and Ireland, while stations in England yielded hundreds of records of 90° and upwards, the hottest day being the 9th, when the thermometer reached 97° at Hillington, Wokingham and in various parts of London, 98° at Canterbury, Epsom, and Raunds, 99° at Isleworth, and 100° at the Royal Observatory, Greenwich, 3° higher than the previous maximum registered since the establishment of regular meteorological observations in 1841. Many night minima were above 65°, as high as 71° at Llandudno, and 72, at Lancaster on the morning of the 13th. As a result the mean temperature of the whole month was exceptionally high. Vegetation is represented as having suffered very severely under the unusual intensity of the drought, sunshine and heat.

Aurora borealis was visible at Stornoway and Sumburgh Head on the 23rd, at the latter station it was of a very bright green.

In a report from Mr. Spencer Compton Collin, it is stated that on the 7th "we saw the stars in daylight. It was a beautiful day, and towards afternoon the wind lulled, and in a cloudless sky, with a brilliant sun from 5 p.m. to 6 p.m., the stars in the eastern meridian shone. Vega and Aquila were brightest, and we counted 20 stars visible in that quarter. At about 6 o'clock they became invisible—still in a

cloudless sky. This happened in West Essex, near Saffron Walden. I was helping in my harvest, and my labourers were sadly disconcerted at seeing stars in the daylight and sunshine."

An earthquake shock was recorded at Mungret College, Limerick, from 11.1 p.m., 16th, till 1.20 a.m., 17th.

Fog was fairly frequent on the western and eastern coasts, but on the south coast it was seldom reported.

The temperature of the coastal water was warmer than in July, by as much as 4° or 5° in the south-east, between the Isle of Wight and the Humber, but the water was nearly everywhere colder than the air on shore, by 5° on the coasts of Berwick and Down.

Rainfall.—With a few unimportant exceptions the month's precipitation was everywhere deficient, in numerous instances between 2 in. and 3 in. less than usual. In various parts of Britain the total fall was less than 25 per cent. of the normal, 22 per cent. at Gordon Castle and Guernsey (Brooklyn), 21 per cent. at Geldeston, London (Camden Square), Totland Bay, Guernsey (Villa Carey), and Jersey, 20 per cent. at Bennington, and 19 per cent. at Brighton. In several places the fall was less than $\frac{1}{2}$ in. There were few instances of more than 20 days with rain, while below 10 they were numerous, only 4 rain days at Rothampsted, Heathfield and Eastbourne.

Bright Sunshine.—A great excess of insolation was noticeable practically everywhere, from two to three hours per day in many places, the Llandudno aggregate being 100 hours, and that of Blackpool 104 hours in excess. Strathpeffer's record was 107 per cent. of the normal, the results elsewhere ranging up to 158 per cent. at Fort Augustus, 160 per cent. at Llandudno, and 164 per cent. at Blackpool.

SEPTEMBER, 1911.

Pressure, Winds and Weather.—In the early part of September the country experienced a continuance of the abnormally fine, hot weather which had prevailed so extensively throughout the two preceding months. After about the 12th the type of pressure distribution underwent an entire change, and for the remainder of the month the weather was cool, changeable, and showery.

In the opening days the greater part of the United Kingdom lay under the influence of a large anticyclone, having its central portion over Austria, our extreme western and northern districts being affected at the same time by a rather deep depression which passed from Iceland to Northern Europe; during the latter part of the 2nd a new anticyclone came in from the Atlantic, and shortly afterwards the two high-pressure systems became united, the combination resulting in a spell of fine warm weather which lasted almost uninterruptedly until the 9th. During this period the winds were mainly from the southward and south-westward in our more northern districts, but from points between North and East in the South, neither current being of any great strength. On the 10th the large high pressure area withdrew bodily to the eastward, the change being followed, in the first instance, by the passage of a deep cyclonic disturbance from Iceland to Norway, and later, on the 12th, by the movement of a shallow depression north-eastwards from the Bay of Biscay across England to the North Sea. Between the 13th and 15th the arrival of a new anticyclone off our western coasts was marked by cool northerly winds, blowing with considerable strength at exposed places in the north and north-west. The central portion of the anticyclone eventually advanced directly over these islands, and at various times between the 15th and 17th the barometer attained its highest level for the month, the readings being above 30.3 in. over the United Kingdom generally, above 30.4 in. in Ireland and Scotland, and above 30.45 in. on the 15th, in the Hebrides. After the 19th an extensive low-pressure system of little depth spread south-eastwards from the Icelandic region over practically the whole of North Western Europe, and on the 20th the barometer in these islands reached its minimum level, the mercury falling below 29.5 in. over the country generally, and below 29.3 in. over nearly the whole of North Britain. The winds at the time were mostly from between South and West and of little force, but on the 21st, when the depression travelled eastwards, a strong current from North and North-West set in, reaching in gusts a velocity of 52 miles per hour at QUILTY, co. CLARE, 54 miles at ROCHE'S POINT, and 62 miles at SCILLY. Between the 22nd and 24th a south-westerly type of weather was produced by a new depression whose borders extended southwards from Iceland; while from the 26th to 28th the conditions were influenced by another disturbance which passed eastwards along the Arctic circle and occasioned in these islands brisk, cool winds from South-West, veering to West and North-West.

Until very nearly the close of September no autumn gale of any consequence had occurred on any part of our coasts. The immunity from such visitations was

rudely broken at the end of the month. At 6 p.m. on the 28th wireless reports from Atlantic liners indicated the existence of a shallow barometrical depression slightly to the westward of the 30th meridian, with its centre in about latitude 53° N. During the ensuing 24 hours the system advanced steadily eastwards, and by 6 p.m. on the 29th its centre had reached a position about 200 miles to the westward of the Southern Hebrides. In the course of the ensuing night the disturbance passed rapidly (at the rate of over 40 miles per hour) across North Britain and increased in depth, the minimum readings of the barometer next morning, when the centre had reached the Yorkshire coast, being below 29.6 in., or apparently about 0.3 in. lower than those of the previous evening. A further intensification took place as the depression passed on to the Continent, and, by 6 p.m., when the centre was over the Zuyder Zee, the barometer had fallen below 29.2 in. After this the disturbance began to fill up, its subsequent progress comprising a slow and very erratic movement across North Germany, the Baltic and Denmark to the North Sea, where the system appears to have entirely dispersed on the night of October 3rd. In the front of the depression the Southerly and South-Westerly winds were of no great strength, but in its rear (owing partly to the decrease in pressure which took place within the central area, and partly to a rapid increase on its western side) a gale from North or North-West was experienced on nearly all the English and Welsh coasts and a severe gale over the entire Southern half of the North Sea area. At the telegraphic reporting stations the extreme force of the gale by Beaufort Scale was returned as 10 (a whole gale) at Spurn Head, Yarmouth, and Dover, while at sea the wind was described by several observers as "of hurricane strength." At none of the anemometrical stations in this country did the mean hourly velocity reach 47 miles per hour (the minimum limit of a strong gale) but in squalls that velocity was greatly exceeded. At Pendennis Castle, Falmouth, an extreme of 57 miles was attained, at Shoeburyness 58 miles, at Gorleston 64 miles, and at Dover 66 miles. The gale resulted in numerous casualties in the North Sea and on the French and Dutch coasts, accompanied in many instances by serious loss of life.

The mean barometrical pressure of the month was slightly above the average, and as the divergence was greater in the West and South than elsewhere, the gradient was favourable for winds from the Westward rather than from the South-Westward as shown by the map of normal pressure. The actual mean values over these islands varied from a trifle below $30^{\circ}10$ in. in the Channel Islands, and $30^{\circ}05$ in. and upwards over the southern portion of the country generally, to $29^{\circ}85$ in. and less in Shetland; further to the northward the values decreased to a little below $29^{\circ}65$ in. in Iceland.

In the early part of the month there was a decided preponderance of fair, dry weather, but while several English localities experienced an absence of rain lasting for 10 or 12 days, the returns include no record of an absolute drought. Thunderstorms occurred in various isolated parts of England on the 4th, and more generally in the north and east of England on the 8th. The passage across England of the shallow barometrical depression of the 12th was accompanied by much electrical disturbance, and by a heavy downpour of rain over nearly the whole of North Wales and the north-west of England, as well as in the Scilly Islands. At St. Asaph the fall amounted to 1.6 in., at Scilly to 1.7 in., at Southport and Lampeter to 1.8 in., and at Ruthin to 1.9 in. Thunderstorms were again experienced over a large portion of the country on the 20th and 21st, but with a few local exceptions the accompanying rainfall was small. During the formation of a small secondary depression over the St. George's Channel on the 25th, exceedingly heavy rain occurred in the South-east of Ireland. At Waterford the fall amounted to 2.2 in., and at Roche's Point to as much as 3.0 in.

The first 12 days of the month were marked by three touches of unusual warmth. On the 2nd the thermometer rose above 85° in many parts of our eastern, midland, and south-eastern counties, and reached 90° at Camden Square, Cromer, and Hillington, and 91° at East Ham. Still higher readings were observed on the 7th and 8th, when shade maximum exceeding 90° occurred over a large portion of England; at Hampstead, Cambridge, Rugby, and Bath, the thermometer on the 8th reached 93° , and at Greenwich, Isleworth, and Raunds, Northamptonshire it touched 94° , the Greenwich reading being the highest on record for the month of September. The third burst of warmth, and the last of the season, occurred on the 12th, when the thermometer rose to 85° and upwards in many parts of our eastern and south-eastern counties, to 88° at Greenwich, and to 89° at Camden Square. Between the 8th and 12th the nights were extremely mild, and the minimum temperature in the south of England on some occasions exceeded 65° . After the middle of the month no midday temperatures appreciably above 70° were recorded in any part of the United Kingdom. Sharp ground frosts occurred in most of the northern and central districts on the 15th and 16th, and again on the 21st and 22nd.

The temperature of the sea water was lower than in August, but at all but a few places round our north-east and south-west coasts it was higher than that of the air on shore.

Rainfall.—Owing mainly to the heavy downpour of the 12th, the total rainfall in the North of England was in excess of the average. A decided excess was reported also in those parts of Southern Ireland which experienced the rainstorm of the 25th, but in nearly all other portions of the United Kingdom the aggregate was small, many stations in Southern England, and the South and East of Scotland recording considerably less than half the normal quantity. The largest totals reported to the Meteorological Office were 9·6 in. (114 per cent. of the average) at Glencarron, 7·7 in. at Gruline, Mull, 6·8 in. (92 per cent. of the average) at Fort William, 5·4 in. at Cruachan and Caragh, co. Kerry, and 5·1 in. (respectively 115 and 173 per cent. of the average) at Stonyhurst and Liverpool. At a number of places in Eastern and Central Scotland, and at a few scattered stations in Ireland and the South of England less than an inch was collected, the smallest totals being 0·4 in. at Balmoral (only 14 per cent. of the average), 0·5 in. at Killiney, near Dublin, and 0·6 in. at Crathes and Foynes (at the latter station only 21 per cent. of the average). Over a large portion of Eastern, Central, and Southern England, and in some parts of Eastern and Central Scotland there were less than 10 days with a measureable quantity of rain, at Harefield only 6 and at Carnoustie only 5. Many stations in the west and north of Scotland reported at least 20 such days, the highest numbers being 28 at Baltasound and Stornoway, and 26 at Glencarron.

Bright Sunshine.—Was rather deficient in Orkney and the Hebrides, as well as at Scilly, but was in excess of the average over the United Kingdom generally, and largely in excess over Eastern, Central and Southern England. South of a line drawn from Yarmouth to Plymouth the total duration exceeded 210 hours, and at some stations in Kent and Sussex it exceeded 250 hours, the largest aggregates reported being 264 hours (153 per cent. of the average) at Hastings, 261 hours (156 per cent. of the average) at Eastbourne and 257 hours (164 per cent. of the average) at Tunbridge Wells and Worthing. In the north and west of Scotland and the neighbouring islands the aggregates were mostly below 120 hours, Castlebay and Deerness experiencing only 106 hours, Oban only 102 hours and Fort Augustus only 94 hours. At Deerness the total amounted to only 97 per cent. of the average but at Fort Augustus the total, though small, was equal to 115 per cent. of the average.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared in the Meteorological Office under the direction of
W. N. Shaw, LL.D., Sc.D., F.R.S.

In compiling the following Tables (pp. 82 to 91) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South-East; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		4. ENGLAND, E.:—	
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Cromer ..	W. H. Archer, for Urban District Council.
Hampstead ..	E. L. Hawke, for the Hamp- stead Scientific Society.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Camden Square	H. Robert Mill, LL.D., D.Sc.	Norwich (Eaton) ..	A. W. Preston.
Westminster ..	The Meteorological Office.	Cambridge ..	R. Irwin Lynch, M.A. The Botanic Gardens.
Greenwich ..	The Royal Observatory.	Clacton-on-Sea	A. W. Shadick, for Urban District Council.
Dulwich ..	W. Marriott.	Bennington ..	Rev. J. D. Parker, LL.D.
Kew ..	Meteorological Office Central Observatory.	Berkhamsted ..	E. Mawley.
2. ENGLAND, CEN- TRAL:—		5. ENGLAND, N.E.:—	
Huddersfield	J. Firth.	Cockle Park ..	T. E. W. Dobson, for the Northumberland County Council.
Wakefield ..	A. French, M.R.C.S. L.R.C.P.	(near Morpeth) ..	The Meteorological Office.
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.	North Shields	
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Durham ..	F. C. H. Carpenter.
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobyer, M.D., M.O.H., for the Corpora- tion.	York ..	Oxley Grabham, M.A., for Yorkshire Phil. Soc.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Spurn Head ..	The Meteorological Office.
Oxford ..	The Radcliffe Observatory.	Lincoln ..	W. Barr, for the Corporation.
Bath ..	W. H. Symons, M.D., M.O.H., for the Corporation.	Hull ..	H. B. Witty, for the Cor- poration.
Shrewsbury ..	Capt. C. S. Reid, R.E.	6. ENGLAND, N.W., WITH NORTH WALES:—	
Sheffield ..	E. Howarth. The Weston Park Museum.	Southport ..	J. Baxendell, for the Cor- poration.
Buxton ..	W. Pilkington.	Manchester ..	J. Niven, M.A., M.B., M.O.H. for the Corporation.
Wistanstow ..	Rev. W. La Touche, B.A.	Aspatria ..	J. Smith Hill, B.A., B.Sc., J.P. The Agricultural College.
Cheltenham ..	A. C. Saxby, for the Cor- poration.	Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.
3. ENGLAND, S.E.:—		Liverpool ..	W. E. Plummer, M.A. Bid- ston Observatory.
Salisbury ..	Thos. Challis, for the Earl of Pembroke.	(Bidston) ..	
Brighton ..	D. Forbes, M.D., M.O.H., for the Corporation.	Llandudno ..	W. Little, for the Town Council.
Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corpora- tion.	Bettws-y-coed	Dr. H. W. Fox, for District Council.
Eastbourne ..	S. B. Henderson, for the Cor- poration.		
Southampton ..	A. Vaughan, for Director General of Ordnance Survey.		
Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.		

Station.	Observer.	Station.	Observer.
7. ENGLAND, S.W., WITH SOUTH WALES:—		8. THE CHANNEL:—	
Llangammarch Wells.	W. Black Jones, M.D.	Scilly	The Meteorological Office.
St. Ann's Head, Pembroke.	The Meteorological Office.	Jersey	The Meteorological Office.
Bristol	D. Rintoul, M.A., Clifton College.	Guernsey ..	Adolphus Colletette.
Portland Bill..	The Meteorological Office.		
Plymouth ..	H. Victor Prigg, A.M.I.C.E., for the Corporation.		
Falmouth ..	The Meteorological Office.		
Woolacombe ..	R. N. Kivell.

* The Summary for "London" is for three calendar months. The "difference from average" is computed from the data for Camden Square, Norwood, and Kew, the average used being that for the 35 years 1871-1905. (Sunshine, 25 years 1881-1905, at Westminster and Kew.) A comparison with the averages for 65 years 1841-1905 for the Royal Observatory, Greenwich, is given in the following tables.

For corresponding values for the years since 1878, see Appendix I, to the Weekly Weather Report of the Meteorological Office, 1908.

Hour (-10).	Rain and other forms of Precipitation.				Weather, Number of days of								Wind, No. of Observations reduced to a total of 93 (Sept. 90) for the month.

NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—The hours of observation are indicated by the type in which the names of stations are printed. Clarendon, normal climatological stations, 9 a.m. and 9 p.m.; **BLACK CAPITALS**, telegraphic reporting, normal climatological stations, 7 a.m., 1 p.m., 9 p.m.; Roman, telegraphic reporting stations, 7 a.m., 6 p.m.; *Italics*, auxiliary climatological stations, 9 a.m. only (Ventnor 9 a.m. and 3 p.m.). At stations marked * an additional observation is taken, at 3 p.m. in the case of stations printed in clarendon type, and at 1 p.m. in the case of stations printed in Roman type. These additional observations are used in preparing the wind summaries, and in computing the number of days of overcast or clear sky. At telegraphic reporting stations (black capitals or Roman type), the results given under "hygrometer" and "cloud" are based on the morning observations only. At Lincoln and Westminster the hygrometrical results are based on the 9 a.m. observations only.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 9 a.m. only, or 9 a.m. and 9 p.m., or 7 a.m., 1 p.m., 9 p.m., or 7 a.m. and 6 p.m., as the case may be.

Hygrometer.—At certain stations the vapour pressure and relative humidity are the results obtained from the daily values. These are entered in italic type. At other stations the calculations are made from the monthly means of the dry and wet bulb readings.

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the mean of the estimates of the "amount of cloud" at the fixed hours of observation is less than 2, and as an "overcast" day if the mean is greater than 8.

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours (see above). At Falmouth, Kew and Stonyhurst the wind observations are based on the records of a standard Robinson anemometer (factor 2.2). (At Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer.) Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales.

Averages.—The averages used are—Temperature and Rainfall for the 35 years 1871-1905; Bright Sunshine for the 25 years 1881-1905. The values are published in Appendix III. to the Weekly Weather Report of the Meteorological Office for 1906.

Royal Observatory, Greenwich.—The averages for Temperature and Rainfall, with which the current values are compared, are for the 65 years 1841-1905. The averages for sunshine are for the period 1897-1911. The earth temperatures are taken at a depth of 3 ft. 2 in. The daily rainfall amounts are those for the 24 hours comprising the civil day. The numbers of days in each month of the quarter which were persistently overcast from midnight to midnight were 0, 0, 0, the number of persistently cloudless days were 0, 1, 0, the number of persistently foggy days were 0, 0, 0.

Mean Values for Districts.—The monthly mean values for districts for temperature, rainfall and sunshine are computed from the data for those stations which are included in the Weekly Weather Report of the Meteorological Office. The selection of stations is not identical with that included in this Report. The district values, as quoted, are comparable with the statistics published in previous issues of the Weekly Weather Report of which a summary is in course of preparation. The averages with which the current district values are compared are for the 25 years 1881-1905. The district values for amount of cloud and earth temperatures are taken from the Monthly Weather Report of the Meteorological Office.

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number** of each REGISTRATION DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

Aberayron, 606.	Blodfield, 228.	Chorley, 475.	Evesham, 379.	Hinckley, 402
Abergavenny, 584.	Blything, 216.	Chorlton, 464.	Exeter, 271.	Hitchin, 126.

* The present number of Registration Districts is 635.

INDEX OF URBAN DISTRICTS.

As existing on 30th September, 1911, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of that Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,163 Urban Districts (including County, Municipal and Metropolitan Boroughs) 156 were each co-extensive, at the end of September, 1911, with one or more Registration Areas.

QUARTERLY RETURN
OF
MARRIAGES, BIRTHS, AND DEATHS
REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF
ENGLAND AND WALES;
WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS
DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 252.] **Marriages**—*July, August, September, 1911.*
Births and Deaths—*October, November, December, 1911.* [Price 9d.]

NOTE.—The figures in this publication are tabulated mainly from statistical Returns furnished by the local Registrars, and for this reason may not be found to correspond exactly with the authoritative figures for the whole year to be published later in the Annual Report.

*General Register Office, Somerset House,
26th January, 1912.*

Throughout this Return revised estimates of populations based upon the numbers enumerated in 1901 and 1911 have been substituted for the estimates shown in the Return for the first quarter of the year, which were based upon the numbers enumerated in 1891 and 1901, and all rates relating to periods before the 1st April, 1911, have been recalculated on revised estimates of population.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1911 is estimated at 45,311,078 persons; that of England and Wales at 36,168,750, that of Scotland at 4,766,860, and that of Ireland at 4,375,468. These estimates are based upon the numbers enumerated at the Censuses of 1901 and 1911.

In the United Kingdom 261,657 *births* and 158,528 *deaths* were registered in the three months ended 31st December 1911. The natural increase of population was, therefore, 103,129. The number of *persons married* in the quarter ended 30th September 1911 was 182,974.

The birth-rate in the United Kingdom in the *fourth* quarter of 1911 was 22·9, and the death-rate 13·9, per 1000 of the estimated population. The marriage-rate in the *third* quarter of 1911 was 16·0 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to a Return of the passenger movement between the United Kingdom and places out of Europe issued by the Board of Trade it appears that in the three months ended 31st December 1911

(22319—41.) Wt. 119-10. 3000. 2/12. D & S. G 31. Sch. 5.

of the passengers stated to be of British nationality the departures exceeded the arrivals by 43,667 persons, a decrease of 5·4 per cent. as compared with the corresponding period of the previous year. English passengers leaving exceeded those arriving by 30,046, Welsh by 1,165, Scottish by 7,675, Irish by 4,766, and British Colonial passengers by 15. Of aliens those arriving exceeded those leaving by 7,901, the balance in the corresponding period of the previous year having been 7,860 in the opposite direction.

The passenger movement between the United Kingdom and the Continent of Europe showed, according to figures supplied by the Board of Trade, a balance outward of 29,841 persons in the fourth quarter of the year. A Return issued by the Home Office shows that the excess of aliens departing for the Continent over those arriving from the Continent in the fourth quarter was 16,985.

Thus the balance of the aggregate passenger movement in the quarter to and from all Countries was 65,607 outward.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,011 registration sub-districts of England and Wales in the three months ended 31st December 1911; and the MARRIAGES in 15,851 churches or chapels, in 15,981 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, in the three months ended 30th September 1911.

Marriages.

In the *third* quarter of 1911 the marriages of 155,622 persons were registered, being equal to an annual rate of 17·1 persons married per 1000 of the estimated population, against an average rate of 17·2 per 1000 in the third quarter of the ten years 1901-1910.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 11·4 in Carnarvonshire, 11·6 in Herefordshire, 13·1 in Dorsetshire, 13·2 in Norfolk, and 13·4 in Denbighshire; the highest rates were 17·6 in the West Riding of Yorkshire, 17·9 in Durham, 18·4 in Bedfordshire and in Warwickshire, 18·6 in Lancashire, and 21·1 in London.

Births.

The births registered in the *fourth* quarter of 1911 numbered 209,269, and were in the proportion of 23·0 annually per 1000 of the population; this is 3·0 per 1000 below the mean birth-rate in the ten preceding fourth quarters, and is the lowest birth-rate recorded in any fourth quarter since the establishment of civil registration. In registration counties with populations exceeding 100,000 the lowest birth-rates during the quarter were 17·3 in Sussex, 18·1 in Carnarvonshire, 18·6 in Dorsetshire, and 18·9 in Somersetshire and in Herefordshire; the highest rates were 25·4 in Warwickshire, 25·6 in the North Riding of Yorkshire, 26·2 in Staffordshire, 28·3 in Monmouthshire and in Glamorganshire, and 29·1 in Durham.

In the 77 great towns the birth-rate averaged 24·4 per 1000, ranging from 14·3 in Bournemouth, 15·0 in Hornsey and in Hastings, 17·6 in Halifax, 18·4 in Bradford, and 18·8 in Huddersfield, to 30·3 in Middlesbrough, 30·7 in Stockton on Tees, 31·0 in West Bromwich, 31·1 in Bootle, 31·4 in St. Helens, and 32·9 in Rhondda. In the 136 smaller towns the mean birth-rate was 22·0 per 1000, and in the remainder of England and Wales, excluding the 213 chief towns, it was 21·7.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 85,484, against 90,061, 92,147, and 86,310 in the fourth quarters of 1908, 1909, and 1910, respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 30s. 4d., 31s. 5d., and 31s. 11d., respectively, in the preceding three quarters, was 32s. 11d. last quarter. The average wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:— of inferior beef, 3½d.; of prime beef, 7½d.; of inferior mutton, 5d.; of prime mutton, 8½d. Compared with the average prices in the preceding three months, the price of inferior beef showed an increase of ¾d., and that of prime beef an increase of ½d. The price of inferior mutton showed an increase of ¾d., and that of prime mutton an increase of ¾d. also. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 19s. 9d. per ton, against 15s. 9d. per ton in the fourth quarter of 1910. The average price of Consols was 77l. 18s. 4d., having been 78l. 1s. 8d., in the preceding quarter. The minimum annual rate per cent. of discount charged by the Bank of England was 4l., having continued at this figure since 21st September, 1911.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 657,456 exclusive of lunatics in county and borough asylums, registered hospitals and licensed houses, of casual paupers, of persons receiving out-door medical relief only, and of patients in the fever and small-pox hospitals of the Metropolitan Asylum District. Of these 657,456 persons, 270,447 received in-door, and 387,009 out-door, relief. The proportion of the population in receipt of poor-law relief was 18·2 per 1000, against 22·6 and 22·1 per 1000 respectively in the fourth quarters of 1909 and 1910.*

Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom, together with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 72–91.

With the exception of about a fortnight of fair dry weather in the earlier half of October the atmospheric conditions during this quarter were almost continuously rough and unsettled. Gales were frequent, though seldom of any great severity, and occasional heavy downpours of rain were experienced in all districts, the south-eastern counties being affected in an unusually large number of instances. Owing to a large predominance of strong winds from between South and West the thermometer was as a rule above its average level, and even in December there was, over the country generally, an entire absence of severe frost. For the same reason fog and mist were rarely observed.

October commenced with a short spell of cold northerly winds, blowing on the 1st with the force of a strong gale on our eastern and

* The large reduction as compared with previous years is mainly due to the discontinuance after the 31st December, 1910, of the disqualification for old age pensions ensuing on the receipt of Poor Law Relief at any time since 1st January, 1908.

south-eastern coasts. After the 4th a long spell of dry anticyclonic weather set in, light variable winds being experienced, with fairly high temperatures, and with occasional night fogs over the inland districts. At many places in the west and north no rain was experienced for 12 or more consecutive days, but in the south-east of England heavy falls occurred on the 4th, the 7th, and the 13th. After the 19th the weather was influenced by cyclonic disturbances which arrived in quick succession from the Atlantic, and was consequently mild, stormy and wet, the only frost of any consequence occurring on the night of the 28th. The gales of the 21st-22nd, 26th-27th and 29th-31st were of considerable strength, and the rain-storms of the 24th and 29th were also heavy, the whole of England and Wales being affected on the former date, and nearly all parts of the United Kingdom on the latter.

November was generally rough and unsettled, but in the intervals between the departure and arrival of the numerous cyclonic systems which came in from the Atlantic the weather was often brilliantly fine, and, as a result, the total duration of sunshine for the month was nearly everywhere in excess of the average. Until about the 18th the prevailing winds were from south-west or west, often blowing with the force of a gale; between the 3rd and 7th, and more especially on the 5th, the storms were in many places of considerable violence. During the prevalence of this strong equatorial current the thermometer was almost continuously above the average, the only night frost of any consequence being observed on the 11th. Rain fell daily in all districts, very heavily on the 11th over the entire southern half of England. After the 18th a gradual but complete reversal took place in the distribution of pressure, the barometer becoming highest to the northward, and lowest to the southward, of the United Kingdom. With this change the wind shifted to the northward, and afterwards to the eastward, and the weather became much colder and drier, with occasional showers of hail, sleet or snow in the northern and eastern districts.

In *December* the conditions were affected by an almost constant succession of cyclonic systems which spread in from the Atlantic, the centres of the various disturbances passing as a rule north-eastwards between Scotland and Iceland. The prevailing winds were therefore from between south and west, often blowing with the force of a gale, but seldom with as much violence as in the early part of November. Temperature was, as a rule, well above the average, and severe frost was entirely absent, the coldest weather occurring on the nights of the 6th-8th or on those of the 22nd or 23rd. The most striking feature in the weather of December was the frequency of heavy rains, more especially over the western and southern portions of the country. At most places situated in the southern parts both of England and Wales, the total fall for the month was considerably more than twice as much as the average, and in some localities it was more than three times as much, Wilton, near Salisbury, reporting a total amounting to more than three and a half times the average. At many southern stations the month was the wettest December noted in records extending back for 40 or 50 years, and at Ross, Herefordshire, for as many as 94 years.

The *mean temperature* of the quarter was above the normal, the excess being slight in the northern and also in the south-western districts, but large (nearly two and a half degrees) in and around London. The highest readings were observed in October, mostly on the 12th or 13th, or between the 18th and 20th, the thermometer

rising on each occasion to 65° and upwards in many parts of the country. On the 12th the thermometer at Sheepstor (Devon) reached 69°, and on the 13th at Aberystwyth it touched 70°. The lowest temperatures occurred on the nights of November 20th and 21st, when the sheltered thermometer sank to between 8° and 10° below the freezing point in many places; at Wokingham early on the 22nd it fell to 20°. Sharp frosts were experienced also between October 25th and 28th, November 9th and 11th, and December 6th and 8th.

The *rainfall* of the quarter was everywhere in excess of the average. In the two northern districts, England north-east and north-west, the excess did not amount to as much as 20 per cent., but further south it was much larger. In England east and the English Channel there was an excess of more than 40 per cent., in London of 57 per cent., and over the south-eastern district generally of no less than 69 per cent. The falls were also unduly frequent, and especially so in those districts in which the aggregate was comparatively small, England north-east and north-west experiencing in the course of the 13 weeks nearly a fortnight of rain days in excess of the normal. The heaviest individual falls of anything like a general character occurred on the following dates in the districts mentioned:—October 21st in the south-east of England, and on October 23rd–24th over a larger portion of our southern counties; October 29th in many parts of the country; November 7th and 11th in the south of England, and on November 18th over the south-eastern counties; December 6th in many districts; December 8th in the south-west of England; December 10th in many districts; and on December 14th over the southern parts of England and Wales.

Bright sunshine. In England south-east and north-east the amount of bright sunshine agreed precisely with the average, while in England east and the Channel it was rather deficient. In London and in England central there was a slight excess, while in the two western districts there was a somewhat larger excess. Notwithstanding the generally unsettled state of the atmosphere, few places experienced throughout the quarter any long continuance of sunless weather.

Deaths.

The deaths registered in England and Wales last quarter numbered 123,785, and were in the proportion of 13·6 annually per 1000 persons living; this rate is 1·8 per 1000 below the mean rate in the ten preceding fourth quarters, and is the lowest death-rate recorded in any fourth quarter since the establishment of civil registration. In registration counties with populations exceeding 100,000, the death-rates ranged from 10·3 in Middlesex, 10·7 in Surrey, 10·9 in Dorsetshire, and 11·1 in Hertfordshire and in Northamptonshire, to 14·6 in the West Riding of Yorkshire, 14·7 in the North Riding, 15·0 in Carnarvonshire, 15·2 in Staffordshire and in the East Riding of Yorkshire, 15·7 in Durham, and 16·1 in Lancashire.

The 123,785 registered deaths included 63,192 of males and 60,593 of females, the death-rate among males being 14·3, and that among females 12·9, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding fourth quarters, the death-rate of males showed a decrease of 2·1, and that of females a decrease of 1·7. Out of equal numbers living, the deaths of males were to those of females as 111 is to 100; the mean proportion in the fourth quarters of the ten preceding years having been 112 to 100.

Urban and Rural Mortality.

In the 77 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1911 is estimated at more than sixteen millions, the death-rate calculated without reference to age and sex constitution of the populations was 14·7 per 1000 living; the rates in the three preceding fourth quarters in the great towns having been 15·5, 15·1 and 15·4. The crude rates in the several towns ranged from 8·7 in Kings Norton, 9·3 in Willesden, 9·4 in Hornsey, 9·7 in Walthamstow, 10·2 in Devonport, and 10·9 in Burton upon Trent, to 18·0 in Bootle, 18·1 in Stoke on Trent and in Burnley, 18·3 in Oldham, and 18·9 in Liverpool and in Sunderland.

In the 136 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at five millions in 1911, the crude death-rate was 12·6 per 1000 living; the rates in the three preceding fourth quarters in the group of smaller towns having been 14·1, 13·8, and 13·1.

In the remainder of England and Wales, with an aggregate population estimated at fifteen millions, of whom seven millions live in small towns and eight millions in rural districts, the crude death-rate was 12·7 per 1000 living; the rates in the three preceding fourth quarters having been 13·8, 13·6, and 13·0.

Crude death-rates, that is the proportions of deaths recorded to the estimated populations amongst which they occur, regardless of age and sex, are a fairly trustworthy test of relative mortality when the rates for short periods in the same area are compared; but when one area is compared with another, crude death-rates should be supplemented by rates in which the age and sex constitution of the respective populations is taken into account. The following statement shows the crude and corrected death-rates in each of the above areas. (See also Table III., page xvii.)*

Fourth Quarter, 1911.

	Crude Death-rates.	Corrected Death-rates.
England and Wales	13·6	13·6
77 Great Towns	14·7	15·6
136 Smaller Towns	12·6	13·1
England and Wales, less the 213 Towns	12·7	11·9

It should moreover be stated that owing to the difficulty of distributing to their proper areas the deaths occurring in public institutions the death-rate in the rural area is probably somewhat overstated.

Mortality at Different Ages.

Of the 123,785 deaths registered in England and Wales last quarter, 23,592 were those of infants under one year of age, 62,811 those of persons aged between one year and sixty-five years, and 37,382 those of persons aged sixty-five years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 113 per 1000; this proportion was 21 per 1000 below the average in the ten preceding fourth quarters, and was lower than that recorded in any

* The age and sex constitution of the several populations as enumerated in 1911 being still unknown, the above rates are corrected on the basis of the constitution of the populations in 1901.

corresponding quarter since the year 1870—the first year in which records of quarterly infantile mortality were kept. Among registration counties with populations exceeding 100,000, the lowest proportions were 59 in Herefordshire, 62 in Dorsetshire, 65 in Somersetshire, 69 in Berkshire, and 71 in Hertfordshire and in Wiltshire. The highest proportions were 128 in the West Riding of Yorkshire, 130 in the North Riding, 132 in Staffordshire and in Northumberland, 146 in Lancashire, and 149 in Durham.

In the 77 great towns infantile mortality averaged 125 per 1000 births, being 12 per 1000 more than that in England and Wales as a whole. Among the several towns the lowest proportions were 60 in Hornsey, 68 in Ipswich, 69 in Devonport and in Burton upon Trent, 73 in Walthamstow, and 75 in Hastings; the highest were 183 in Sunderland, 186 in Oldham, 187 in Wigan, 189 in Preston, and 195 in Burnley. Among the 136 smaller towns infantile mortality averaged 110 per 1000 births, ranging from 25 in Torquay, 38 in Royal Leamington Spa, 39 in Hendon, 40 in Kettering, 42 in Bromley, and 43 in Erith, to 197 in Glossop and in Widnes, 201 in Doncaster, 207 in Radcliffe, 211 in Ashton under Lyne, and 225 in Hartlepool. Excluding these 213 towns, infantile mortality in the remainder of England and Wales was in the proportion of 99 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty-five years was at the annual rate of 7·4 per 1000 of the estimated population at this group of ages. In the 77 great towns the mean mortality at this age-group was 8·4 per 1000, the death-rates ranging from 4·8 in Kings Norton, 4·9 in Hastings, 5·3 in Reading, 5·5 in Willesden, and 5·6 in Hornsey and in Walthamstow, to 10·5 in Bootle and in Warrington, 10·6 in Stoke on Trent and in Sunderland, 10·9 in Burnley, 11·4 in Oldham, and 11·8 in Liverpool. In the 136 smaller towns the mortality at this age-group averaged 6·8 per 1000.

Among persons aged sixty-five years and upwards the mortality was at the annual rate of 87·9 per 1000 of the estimated population at this group of ages. In the 77 great towns the mean mortality at this age-group was 101·7 per 1000; the lowest rates were 57·8 in Devonport, 61·7 in Coventry, 65·2 in Kings Norton, 70·8 in Merthyr Tydfil, and 72·2 in Northampton; the highest rates were 126·6 in Barrow in Furness, 130·9 in Salford, 134·6 in Dewsbury, 141·0 in South Shields, and 141·8 in West Hartlepool. In the 136 smaller towns the rate averaged 92·5 per 1000.

Mortality from certain Epidemic Diseases.

The 123,785 deaths from all causes include—

3,743 that were attributed to diarrhoea and enteritis			(under 2 years),
1,462	"	"	diphtheria,
1,264	"	"	measles,
1,115	"	"	whooping-cough,
933	"	"	enteric fever,
553	"	"	scarlet fever,
0	"	"	small-pox,
0	"	"	typhus,
0	"	"	pyrexia of uncertain origin.

Thus, to the above-mentioned epidemic diseases in the aggregate, 9,070 deaths were referred last quarter.

The average mortality from diarrhoea and enteritis under 2 years of age, typhus, and pyrexia of uncertain origin, is not available for

comparison ; the rates for each of the other diseases were below the decennial average.

Diarrhœa and *enteritis* (under 2 years) was the assigned cause of 3,743 deaths last quarter, corresponding to an annual rate of 0·41 per 1000 of the population at all ages. Among counties with populations exceeding 100,000 persons, the lowest death-rates were 0·07 in Herefordshire, 0·11 in Carnarvonshire, and 0·13 in Dorsetshire ; the highest rates were 0·57 in Staffordshire and in the East Riding of Yorkshire, 0·59 in Lancashire, 0·66 in Glamorganshire, and 0·67 in Durham. In the 77 great towns the average death-rate from these causes (under 2 years) was equal to 0·51 per 1000 of the population at all ages. Among these towns the lowest death-rates were 0·08 in Burton upon Trent, 0·09 in Croydon, 0·10 in Wallasey, and 0·13 in Northampton ; the highest rates were 1·09 in Walsall, 1·21 in Wigan, 1·27 in Warrington, and 1·35 in Burnley. In the 136 smaller towns the average death-rate was 0·42 per 1000, the mortality being highest in Mansfield, Ince in Makerfield, Widnes, Dudley, Wednesbury, and Glossop. In the remainder of England and Wales the death-rate averaged 0·31 per 1000.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,462 deaths, a number corresponding to an annual rate of 0·16 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·04 per 1000. In two of the registration counties no death from this disease occurred last quarter, and the death-rate did not exceed 0·04 per 1000 in Hertfordshire, Buckinghamshire, Oxfordshire, or Wiltshire. Among counties with populations exceeding 100,000, the highest death-rates were 0·22 in Leicestershire, 0·23 in Devonshire, 0·24 in Bedfordshire and in Cambridgeshire, 0·25 in Derbyshire, and 0·28 in Carnarvonshire. The average death-rate from diphtheria in the 77 great towns was equal to 0·18 per 1000 of their aggregate population. Six of the towns were free from diphtheria mortality. The highest death-rates were 0·40 in Portsmouth, 0·43 in Stoke on Trent, 0·55 in Preston, 0·56 in Swansea, and 0·61 in Wallasey. In the 136 smaller towns the mortality from this disease averaged 0·16 per 1000, the rate being highest in Gillingham, Taunton, Kingston upon Thames, Bedford, Gravesend, and Chorley. In the remainder of England and Wales diphtheria caused an average mortality of 0·14 per 1000 living.

Measles was returned as the cause of 1,264 deaths last quarter, corresponding to an annual rate of 0·14 per 1000 of the population, or 0·16 per 1000 below the average in the fourth quarters of the preceding ten years. Of the 55 registration counties, thirteen were free from measles mortality. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·53 in Nottinghamshire, 0·70 in Carnarvonshire, and 0·72 in Staffordshire. In the 77 great towns measles caused an average mortality of 0·15 per 1000. In thirty of these towns no death from this disease was registered. The highest death-rates were 0·71 in Bournemouth, 0·86 in Nottingham, 1·29 in Norwich, 1·35 in Wolverhampton, and 2·03 in Burnley. In the 136 smaller towns, the average death-rate was 0·18 per 1000 living, the highest mortality among these towns being in Chorley, Wednesbury, Oldbury, Coseley, Tipton, and Bilston. In the last named town the mortality was as high as 7·87 per 1000 living. In the remainder of England and Wales the average measles death-rate was 0·11 per 1000.

Whooping-cough accounted last quarter for 1,115 deaths, and for a death-rate of 0·12 per 1000 annually, which is below the average rate in the ten previous corresponding quarters by 0·06 per 1000. In eleven counties no death from whooping-cough was registered last quarter. Among counties with populations exceeding 100,000, the highest death-rates from this cause were 0·22 in Monmouthshire, 0·23 in Staffordshire, 0·24 in Nottinghamshire, 0·25 in Warwickshire, 0·26 in Cornwall, and 0·29 in Durham. In the 77 great towns whooping-cough caused an average death-rate of 0·13 per 1000 living. No death from this disease occurred in twelve of these towns; but the rate was equal to 0·50 in Great Yarmouth, 0·64 in Sunderland, 0·99 in St. Helens, and 1·09 in Walsall. In the 136 smaller towns the average death-rate from whooping-cough was 0·10 per 1000, the mortality being highest in Lowestoft, Leigh (Lancs.), Abertillery, and Radcliffe. In the remainder of England and Wales whooping-cough caused an average mortality of 0·12 per 1000 annually.

Enteric fever.—As in previous returns deaths from *enteric fever* have been tabulated in the present return separately from those due to *typhus*, or to *pyrexia* of uncertain origin. They numbered 933, equal to a rate of 0·10 per 1000, which is 0·02 per 1000 below the average death-rate from “*fever*” in the fourth quarters of the previous ten years. In eight counties no death from enteric fever was returned last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·20 in the West Riding of Yorkshire and in Northumberland, 0·21 in Monmouthshire, 0·27 in Durham, and 0·33 in the East Riding of Yorkshire. In the 77 great towns enteric fever caused an average mortality of 0·09 per 1000 annually. In fourteen of these great towns no death from enteric fever occurred, and in thirteen towns only one death each. The highest enteric fever death-rates were 0·32 in Rotherham, 0·37 in Grimsby, 0·40 in Wigan, and 0·50 in St. Helens and in Hull. In the 136 smaller towns enteric fever caused an average mortality of 0·11 per 1000 annually, the rate being highest in Stalybridge, Colne, Widnes, Swinton and Pendlebury, Bailey, and Doncaster. In the remainder of England and Wales the death-rate from enteric fever averaged 0·11 per 1000.

Scarlet fever accounted last quarter for the deaths of 553 persons, equal to a rate of 0·06 per 1000 living, or 0·06 per 1000 less than the decennial average rate for the fourth quarter. Eleven of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·10 in Nottinghamshire, in Derbyshire, and in Monmouthshire, 0·14 in Staffordshire, 0·15 in Warwickshire, and 0·28 in Herefordshire. In the 77 great towns scarlet fever accounted for an average mortality of 0·07 per 1000 annually. No death from this disease was recorded in twenty-four of these towns. The highest scarlet fever death-rates were 0·21 in Aston Manor, 0·23 in Dewsbury and in Rhondda, 0·24 in Newport (Mon.), 0·36 in Norwich, and 0·38 in Stoke on Trent. In the 136 smaller towns the average death-rate from scarlet fever was 0·07 per 1000 living, the highest mortality being in Nuneaton, Chorley, and Wolstanton United. In the remainder of England and Wales this disease caused an average death-rate of 0·05 per 1000 living.

No death from *small-pox* was registered last quarter in any part of England and Wales, the numbers in the four quarters immediately preceding having been 2, 9, 9, and 5, respectively.

Violent Deaths.

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 4,708 last quarter, and corresponded to an annual rate of 0·52 per 1000 of the population, which is 0·05 per 1000 below the average in the ten preceding fourth quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·26 in Bedfordshire, 0·30 in Berkshire and in Middlesex, 0·31 in Carnarvonshire, and 0·33 in Hertfordshire; the highest rates were 0·61 in Lancashire, 0·68 in Durham, and 0·76 in Glamorganshire. In the 77 great towns the mean rate was 0·54 per 1000 living. Among the several towns the rate was only 0·11 in Grimsby, 0·15 in Kings Norton, 0·16 in Reading, and 0·17 in Burton upon Trent; but it rose to 0·83 in Rhondda, 0·85 in South Shields, 0·95 in Sunderland, and 0·97 in Liverpool.

Certification of Causes of Death.

Of the 123,785 deaths registered in England and Wales last quarter, the causes of 113,014, or 91·3 per cent., were certified by registered medical practitioners, and the causes of 9,133, or 7·4 per cent., by coroners, after inquest, whilst the causes of the remaining 1,638, or 1·3 per cent., were not certified, the average percentage of uncertified deaths in the ten preceding fourth quarters having been 1·6. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Hampshire, Middlesex, Oxfordshire, Wiltshire, Cornwall, Somersetshire, Gloucestershire, Cheshire, the West and East Ridings of Yorkshire, Monmouthshire, and Glamorganshire, but it reached 2·7 in Derbyshire, 2·8 in Carnarvonshire, 3·1 in Warwickshire, 3·4 in Cumberland, 3·7 in Durham, and 4·0 in Shropshire. In the 77 great towns the mean proportion of uncertified deaths was 0·8 per cent.; but whilst no uncertified death was registered in Croydon, Hornsey, Tottenham, East Ham, Leyton, Walthamstow, Hastings, Brighton, Bournemouth, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Wolverhampton, Walsall, Derby, Wallasey, Wigan, Bradford, Dewsbury, Cardiff, or Merthyr Tydfil, the proportion per cent. rose to 4·2 in Birmingham and in Warrington, 4·6 in Burton upon Trent, 4·7 in South Shields, 4·8 in Bootle, and 6·2 in Gateshead.

Inquests.

Inquests were held in England and Wales concerning 9,133, or 7·4 per cent., of the total deaths, the mean proportion in the ten preceding fourth quarters having been 7·0 per cent. In the 77 great towns the proportion of inquest cases averaged 8·5 per cent., ranging from 2·8 in Preston, 3·1 in Gateshead, 3·4 in Kings Norton and in Grimsby, and 3·6 in St. Helens and in Warrington, to 11·1 in Bristol, 11·3 in Croydon, 11·7 in East Ham, 12·5 in Cardiff, 13·1 in Tottenham, and 13·5 in Devonport.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 26,109, or 21·1 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding fourth quarters having been 18·0 per cent. In the 77 great towns the deaths in public institutions averaged 28·0 per cent. of the total deaths, the lowest percentages

in the several towns being 3·0 in Rhondda, 5·3 in Handsworth (Staffs.), 9·3 in Smethwick, 10·4 in Stockton on Tees, and 10·6 in Wigan; the highest percentages were 30·7 in West Ham and in Walthamstow, 31·8 in Brighton, 35·6 in Liverpool, 38·0 in Leyton, and 41·7 in London.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual rates of birth and death per 1000 living in these towns last quarter were as follows:—

—	Birth-rate.	Death-rate.
Edinburgh	19·7	15·6
Glasgow	25·9	17·7
Dublin (Registration Area)	25·9	20·6
Belfast	25·9	16·7

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 30 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the 13 weeks ended 30th December, 1911 (Table XIII.). Excluding the Indian and Egyptian cities, the highest and lowest annual rates of birth and death during the fourth quarter of 1911 were as follows:—

BIRTH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Bucarest	31·1	Paris	16·5
St. Petersburg	29·9	Brussels	16·6
Trieste	28·0	Prague	16·6
Breslau	26·9	Vienna	17·8
New York	26·8	Antwerp	18·1
Cologne	26·3	Berlin	19·1
London ...		24·0	

DEATH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Bucarest	24·6	Frankfort-on-Main	10·8
Moscow	23·9	Stockholm	11·2
Rio de Janeiro	20·0	Antwerp	11·5
Trieste	19·3	Amsterdam	11·5
St. Petersburg	19·1	Brussels	12·7
New Orleans	19·0	Copenhagen... ..	12·7
London ...		14·3	

Small-pox caused 12 deaths in St. Petersburg, 6 in Moscow, 5 in Paris, 3 in New York, and 2 in Rio de Janeiro.

The mortality from *enteric fever* was highest in Bucarest, St. Petersburg, Budapest, New Orleans, and Paris; from *measles* in Moscow, St. Petersburg, Budapest, Christiania, and Cologne; from *scarlet fever* in Bucarest, Moscow, Budapest, Berlin, Prague, and St. Petersburg; from *whooping-cough* in Rio de Janeiro, Amsterdam, St. Petersburg, and Moscow; and from *diphtheria* and *croup* in Hamburg, Bucarest, Berlin, Moscow, Chicago, and Dresden.

Infantile Mortality.—Among those European cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 63 in Stockholm, 72 in Amsterdam, 84 in Copenhagen, and 92 in Christiania, to 147 in Vienna, 148 in Antwerp and in Berlin, 149 in Breslau, 157 in Prague, 158 in Munich and in Trieste, and 191 in Bucarest. In London the proportion was 113 per 1000 births.

INDIAN CITIES.—The death-rate was equal to 30·1 per 1000 in Calcutta, 32·0 in Bombay, and 50·8 in Madras. *Small-pox* caused 41 deaths in Madras, 31 in Bombay, and 1 in Calcutta; *measles* caused 10 deaths in Madras, 6 in Bombay, and 3 in Calcutta; *plague* caused 103 deaths in Bombay, 63 in Calcutta, and 1 in Madras; and *Asiatic cholera* caused 686 deaths in Madras, 489 in Calcutta, and 32 in Bombay.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the 13 weeks ended 30th December, 1911 (*see* pages xxix—xxxiv); and in the two following tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxv—xl).

The Year 1911.

UNITED KINGDOM.

Passenger Movement.

According to a Return of the passenger movement between the United Kingdom and places out of Europe issued by the Board of Trade it appears that in the twelve months ended 31st December, 1911, of the passengers stated to be of British nationality the departures exceeded the arrivals by 261,858 persons, an increase of 12·0 per cent. as compared with the corresponding period of the previous year. English passengers leaving exceeded those arriving

by 179,714, Welsh by 5,355, Scottish by 61,358 and Irish by 23,817, while of British Colonial passengers the arrivals exceeded the departures by 8,386. Of aliens those leaving exceeded those arriving by 10,975, the balance in the previous year having been 86,371.

The passenger movement between the United Kingdom and the Continent of Europe showed, according to figures supplied by the Board of Trade, a balance inward of 32,198 persons during the year. A Return issued by the Home Office shows that the excess of aliens arriving from the Continent over those departing for the Continent during the year was 23,409.

Thus the balance of the aggregate passenger movement during the year to and from all Countries was 240,635 outward.

ENGLAND AND WALES.

According to the quarterly returns furnished by local registrars, 881,233 births and 527,864 deaths were registered in England and Wales in the year 1911. The natural increase of population, by excess of births over deaths, was therefore 353,369, the average annual increase in the preceding five years having been 405,559.

The birth-rate in England and Wales in 1911 was 24·4 per 1000 of the population, which is 0·7 per 1000 below the rate in 1910, and lower than the rate in any other year on record. Compared with the average in the ten years 1901-1910, the birth-rate in 1911 showed a decrease of 2·8 per 1000.

The death-rate in 1911 was 14·6 per 1000, which was 1·1 per 1000 above the rate in 1910, and equal to the rate in 1909, but lower than the rate in any other year on record; compared with the average rate in the ten years 1901-1910, the death-rate in 1911 showed a decrease of 0·8 per 1000.

The 527,864 deaths registered in 1911 included 114,798 of infants under one year of age, 263,481 of persons aged between one year and 65 years, and 149,585 of persons aged 65 years and upwards. The rate of mortality among infants under one year of age to 1000 registered births was 130, which is 24 per 1000 above the rate in 1910—the lowest on record—but is only 3 per 1000 above the average in the ten years 1901-1910 notwithstanding the excessive heat and drought which prevailed in the third quarter of the year. A higher infantile mortality than this was experienced in forty-three out of the last fifty years. The death-rate among persons aged between one year and 65 years was 7·8, and that among persons aged 65 years and upwards was 88·6, per 1000 of the estimated populations at the respective groups of ages.

The total deaths registered included 38,467 from diarrhoea and enteritis (under 2 years), 12,979 from measles, 7,648 from whooping-cough, 4,755 from diphtheria, 2,383 from enteric fever, 1,871 from scarlet fever, and 23 from small-pox. Thus, to these epidemic diseases in the aggregate 68,126 deaths were referred last year.

To different forms of violence 20,103 deaths were referred, being in the proportion of 0·56 per 1000 of the population, against 0·57, 0·54, and 0·53 per 1000 in the three preceding years.

The 527,864 deaths included 37,200 cases, or 7·0 per cent., in which inquests were held; and 6,666 cases, or 1·3 per cent., in which the causes were not certified either by registered medical practitioners or by coroners.

Birth-rate, Death-rate, and Analysis of Mortality during the year 1911.

	ANNUAL RATE PER 1000 LIVING.										Deaths under one year to 1000 Births.
	Birth-rate.	Death-rate.		Enteric Fever.	Small- pox.	Measles.	Scarlet Fever.	Whoop- ing cough.	Diph- theria.	Diarrhoea and Ente- ritis (under 2 years).

* The Corrected Death-rates represent the Crude Death-rates multiplied by the respective Factors for Correction for differences of sex and age constitution of population as in 1901. For construction and use of these Factors see Annual Summary 1908, pp. x-xiii. Owing to the difficulty of distributing to their proper areas deaths occurring in public institutions the death-rate of the rural area is probably somewhat overstated.

The foregoing statistics for the year 1911, having been derived from returns furnished quarterly by the local registrars, are subject to revision when the causes of death and other details shall have been finally classified and tabulated for publication in the Registrar-General's Seventy-fourth Annual Report, which is now in course of preparation.

TABLES.

TABLE V.—77 Great Towns.—Population: Births, Deaths, and Meteorology in the 13 Weeks ended 30th December, 1911.

NOTE.—The 77 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-residents, and (2) by including the deaths of London residents occurring in the Metropolitan Outer Ring or in Metropolitan Public Institutions situated outside the County. (See also Table XII.) The deaths in the other towns have been corrected, as far as possible, (1) by the exclusion of all deaths of non-residents, and (2) by the inclusion of deaths of residents in certain outlying public institutions. With regard to the Outer Ring and its constituent areas, however, correction is more complete, a distribution of all transferable deaths occurring in any part of Greater London having been made.

* Rate calculated upon the population at all ages.

TABLE VII.—One hundred and thirty-six Smaller Towns.—Population; Births and Deaths in the QUARTER ended 31st December, 1911.

NOTE.—The 136 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected as far as possible, (1) by the exclusion of all deaths of non-residents, and (2) by the inclusion of residents in certain outlying institutions. With regard to towns in the Outer Ring, however, correction is more complete, a distribution of all transferable deaths occurring in any part of Greater London having been made.

* The figures in this table, excepting those for London, which are derived from Table IX., are compiled and furnished to the Registrar-General by the Medical Officer of the Local Government Board.

† The figures for Southsea District of Portsmouth are—population (1901), 18,612; enteric fever, 2; typhus, nil; continued fever, nil; small-pox, nil; scarlet fever, 9; diphtheria (including membranous croup), 4; erysipelas, 2; and puerperal fever, nil.

‡ The number of cases notified for Reading, Birmingham, Bury and Burnley include those for these areas as extended from 9th November, 1911.

|| The figures for these Districts are in respect of the period 1st October to 8th November, inclusive only. On 9th November, Handsworth, Aston Manor, and the greater part of Kings Norton were, with other districts, added to, and now form part of the City of Birmingham.

TABLE VIII. (continued).—NUMBER of CASES of INFECTIOUS DISEASE NOTIFIED in certain LARGE TOWNS of ENGLAND and WALES during the 13 Weeks ended 30th December, 1911.*

* This table is supplied by the Medical Officer of Health of the Administrative County of London, and is compiled from returns which the London County Council receives from the Metropolitan Asylums Board under section 55 (4) of the Public Health (London) Act, 1891.

† Provisional estimates based on the results of the Censuses of 1901 and 1911 (Unrevised.)

‡ The notification of Ophthalmia Neonatorum and Poliomyelitis was made compulsory in the Administrative County of London on the 13th March and 1st September, 1911, respectively.

* The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note.^b

^b For London the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

Registration Districts.		Area in Statute Acres.	Enumerated Population, 1911. (Unrevised)	Marriages		Births		Deaths		The DEATHS in the Quarter are stated by the Registrars to include												
				Registered in Quarter ended 30 Sept. 1911.	Registered in Quarter ended 31 Dec. 1911.	Average in Quarter ended 31 Dec. in the 3 Years 1908-10.	Registered in Quarter ended 31 Dec. 1911.	Deaths of		Deaths from												
								Infants under 1 Year of Age.	Persons aged 5 Years & upwards.	Enteric (or Typhoid) Fever.	Small-pox.	Measles.	Scarlet Fever.	Whooping-cough.	Diphtheria.	Diarrhoea and Enteritis (under 2 years).	Violence.	Inquest Cases.	Deaths in Public Institutions.	Unidentified Causes of Death.

^a The Registration Sub-districts (2011 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; *F* a Hospital for Infectious Diseases; *H* another Hospital; and *L* a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

^b See page 2, note ^b.

^c See page 6, note ^b.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING
THE QUARTER ENDED DECEMBER 31ST, 1911.

EXTRACTED FROM THE
MONTHLY WEATHER REPORTS
OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 222 STATIONS,
TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 56
STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

OCTOBER, 1911

Pressure, Winds and Weather.—Following immediately in the rear of the cyclonic disturbance which occasioned the very tempestuous weather at the close of September there came a decided change in the type of pressure distribution over and around the British Isles. By the morning of October 1st this country had been brought under the influence of an extensive area of high pressure, whose central space was out on the Atlantic, about the 20th meridian. Thenceforward, through the first eighteen days of the month, this anticyclone was the dominating factor in determining the weather over these islands. For a week the region of maximum pressure remained out on the ocean, the barometer ascending to about 30·7 ins. on the 4th in 55° N., 20° W. On the 8th the centre was over Iceland. From this locality it advanced along a general south-easterly course, crossed Britain from the Hebrides to the south-east coast, and by the 12th it had reached Central Europe where it dispersed. The highest pressure over these islands was attained on the 10th, the barometer mounting to 30·5 ins. and upwards at all stations, and above 30·6 ins. from the north of Ireland to the Tyne and the Forth, to 30·63 ins. at Leith. On the 14th a new anticyclone developed over Scandinavia and moved down to Central Europe, these islands being under the influence of the western part of the system.

After the 18th a cyclone moved gradually eastward from the Atlantic, and on the 21st its centre lay at the west of Ireland. For the remainder of the month the weather was dominated by this and other low pressure systems arriving from the Atlantic. The lowest readings reported were 28·77 in. at Holyhead on the 26th, and 28·77 in. at Lerwick on the 30th.

For the entire month the mean distribution of pressure differed greatly from the normal, a belt of relatively high values, above 29·9 in., extending from Iceland across Britain and southern Scandinavia, with local patches above 29·95 in. in Scotland and eastern Iceland. On either side of this area the values diminished to below 29·8 in. on the Bay of Biscay and in the far North of Norway. Over the greater part of this country the results were higher than usual, by as much as 0·18 in. at Lerwick, and 0·17 in. at Stornoway, but along the south-western coasts they were lower, to the extent of 0·06 in. at Scilly. Instead of the normal Westerly to South-Westerly type the mean gradient was South-Easterly to North-Easterly and Northerly, and winds from these points were most prevalent.

During the first four days of the month there was a considerable Northerly gradient between the high pressure beyond Ireland and depressions extending from the Bay of Biscay to Denmark, so that on each of these days strong or high North-Westerly to North-Easterly winds were experienced, attaining the force of a gale locally. The conditions then became much quieter, and continued so through the remainder of the anticyclonic period. The weather generally was dry for close upon three weeks, no rain being measured at many stations on twelve or more consecutive days, fifteen days in Anglesey, at Colwyn Bay and Kilmarnock, and sixteen days at Ruthwell (Dumfries). There were, however, some interesting exceptions. On the 4th and 7th shallow disturbances on the Continent caused heavy rains in Kent, the amounts on the former date ranging up to 1·5 in. at Tonbridge, and on the latter to 1·2 in. at Broadstairs. An extremely slight irregularity in pressure on the 13th, extending up the Channel to Belgium, brought the wind into East over our south-eastern counties, where heavy rain fell, up to 1·3 in. at Hemel Hempstead, while Jersey had 2·4 in. The dry period was marked by frequent and sometimes dense fogs over the inland districts.

With the reversal of the pressure distribution the character of the weather underwent a complete change, bringing to a close the great drought of 1911, which had held, with but few and brief interruptions, for about four months. The Isleworth observer notes that all through this long period the ground below a depth of 4 in. remained dry continuously; and the Broadford (Co. Clare) observer reports that all the lakes in the district were lower than ever they were before, exposing the remains of some remarkable ancient deer.

From the 19th onward wind and rainstorms occurred except on the 28th. In nearly every instance the gales were Southerly to Westerly in direction. By the 21st the wind had increased to a strong gale (force 9) at Scilly and Pendennis, gusts having a velocity of 68 miles per hour being registered at the latter station. On the 22nd the strength of a whole gale (force 10) was reached at Scilly, the anemometrical records showing gusts at the rate of 60 miles an hour at Brighton, 64 miles at Pendennis, and 66 miles at Scilly. Next day a whole gale was felt at Dungeness, the Dover anemometer registering gusts of 64 miles an hour. A strong gale blew at Dungeness on the 25th, at Malin Head (from East) on the 26th, and at Jersey on the 27th, Dover at the same time having gusts at the rate of 64 miles an hour. The passage of a deep cyclonic area across the Farøe in the last three days marked the most stormy period of the month. Lerwick, Wick and Malin Head experienced a strong gale on the 29th; Lerwick, Deerness and Castlebay on the 30th, Pendennis a whole gale, while Malin Head reported a storm (force 11), the anemometers recording gusts of 61 miles an hour at Quilty, 66 miles at Dwyran (Anglesey), 63 miles at Scilly, and 71 miles at Pendennis. On the 31st Malin Head and Nottingham had a strong gale, and Dungeness a whole gale.

The rainfall during this stormy fortnight was heavy in nearly all districts, there being scarcely a day without falls of an inch or more of rain. On the 20th, the fall was heaviest in Ireland, up to 1·3 in. at Newcastle (Wicklow); on the 21st in the southern half of England and Wales, up to 1·7 in. at Brighton; on the 23rd in northern Scotland and south-eastern England, 1·4 in. at Dyce (Aberdeen) and Hastings. The whole of England and Wales seems to have been affected on the 24th, the heaviest once more being in the south-east, 1·5 in. at Send, 1·8 in. at Watergate and Westbourne, and 1·9 in. at Eastbourne. Ireland and northern England had the heaviest up to the 26th up to 1·4 in. at Glenarm. The worst and most extensive storm occurred on the 29th, more than 1½ in. of rain falling in various parts of England, Wales, Scotland and Ireland, the heaviest, 2 in. at Kirkby Lonsdale and Colmonell, 2·1 in. at Inverary, 2·3 in. at Graythwaite, 2·5 in. at Eskdalemuir, 2·8 in. at Lickeen, Caragh Lake, 3·2 in. at Cruachan, 4·2 in. at Ambleside, while the gauge at Seathwaite registered 7 in. At Ardross the storm brought about an excessive flood. In the last week snow showers fell in many localities. At Sumburgh Head there was a deep fall in the night of the 26th. Local thunderstorms occurred on many days.

On the whole the temperature maintained a fairly uniform level during the month. The early days were unusually cold generally, and minima of 32° and below were recorded in nearly all districts on the 1st and 2nd. The 12th and 13th, and the 18th to the 20th were warm, with numerous afternoon maxima of 66° to 68° at Sheepstor (Devon) 69° on the 12th, and about the 20th many of the night minima were above 55°, as high as 59° at Teignmouth, Jersey and Bognor. On the 26th and 27th, a number of northern stations had maxima below 40°, Sumburgh Head only 35°. It was not until the night of the 28th that a severe frost, lasting a few hours, was experienced, the shaded thermometer falling to 25° and under at a very large number of stations, to 20° at Nairn and Llangammarch Wells, 19° at Crathes and Eskdalemuir, 18° at Inch and West Linton, and 15° at Balmoral. This was followed by the heavy rain of the 29th mentioned above.

Aurora was noted at a few northern stations on the 2nd, 10th, 17th, 18th and 25th.

Coast fogs were experienced in many localities between the 11th and 21st.

The temperature of the coastal waters was several degrees lower than in September, as much as 9° between Eastbourne and the Shipwash, but the water was warmer than the air on shore, by 6° off the north-east of Scotland.

Rainfall.—In spite of the many heavy falls of rain after the 18th, the precipitation for the whole month was less than the normal, excepting in the south of Ireland, the Channel Islands and south-eastern England. Northern Scotland as a whole received only 53 per cent. of the average. Bendamph and Glencarron had 34 per cent., Dunrossness 35, and Fort William 50 per cent. On the other hand Kent and Sussex had excessive amounts, Margate 183 per cent., Dungeness 187, and Folkestone 209 per cent. The aggregates ranged from 1·3 in. at Brandon (Suffolk), and 1·4 in. at Dundee to more than 7 in. round Dover, 11·5 in. at Glenquoich, and 13·2 in. at Seathwaite. Rain was measured on 9 days at Donaghadee, and 10 at Dumfries and Ruthwell, against 24 at Cockle Park, Belvoir Castle, Cromer and Hillington and 25 at Boston.

Bright Sunshine.—As a general rule the duration of insolation differed little from the average, but Llandudno had 136 per cent. of the normal, Blackpool 123, and Woolacombe 127 per cent., against Deerness 74 per cent., Durham 73, and Marchmont 70 per cent. Portsmouth, Worthing and Dwyran (Anglesey) totalled 131 hours, Woolacombe 129 hours, while Sheffield had 52, Baltasound 49, and Huddersfield only 43 hours.

NOVEMBER, 1911.

Pressure, Winds and Weather.—Under the influence of numerous and very deep cyclonic systems, moving across or in the immediate vicinity of the British Isles, the mean barometric pressure for November was everywhere considerably below the usual level. The smallest deficiency was in the South-west, as much as 0·16 in. at Jersey, and 0·19 in. at Scilly, while at Birr Castle it was 0·25 in., and at Malin Head 0·26 in. There was thus no decided variation in the large deficiency, indicating that the general distribution of mean pressure was in close agreement with the normal relatively high in the south, and low in the north, favourable to a preponderance of winds from between South and West. From 29·88 in. at Paris, and 29·80 in. at Jersey the barometric values diminished northward to 29·55 in. at Wick, and 29·54 in. at Lerwick. A trough of low pressure stretched from the Upper Atlantic east north-eastward between Scotland and Iceland towards the north of Norway, the lowest mean value being 29·50 in. on the south-west coast of Iceland, at Reykjavik. Thence the values increased northward, to above 29·6 in. beyond the north coast of the island. The anticyclonic systems of the month were almost entirely confined to Continental countries and the Iceland-Greenland region, so that the barometer seldom passed above 30 in. in these islands, but on the 14th it mounted to 30·38 in. at Dover and Jersey, on the 26th to 30·45 in. at Lerwick, and on the 29th to the same height at Yarmouth and Jersey. Notwithstanding this absence of very high readings the range of pressure for the month was large. At every station in the kingdom the barometer dropped below 29 in. on at least one day, at nearly all on two days, and in many cases on three, four or five days. The deepest depressions were those of the 4th and 5th when the readings were below 28·5 in. over the northern half of Scotland, and as low as 28·09 in. at Lerwick. On the evening of the 18th the mercury went down to 28·5 in. on the coast of Kent. In the west of Ireland the extreme range was 1½ in., but over a great part of the kingdom it exceeded 1½ in., and at the most northern stations in Scotland it was more than 2 in., amounting to 2·4 in. at Lerwick.

After about four months of remarkably fine and drougthy weather, the conditions underwent a complete reversal in October, wind and rain storms becoming general from the 19th of that month. This abnormally disturbed type was maintained, without any appreciable interruption, until about November 18th or 19th. Wireless reports from steamships showed that throughout this period the conditions on the upper portion of the Atlantic were of a stormy character, under the influence of a series of deep cyclonic areas passing from the western to the eastern side of the ocean. Some of these followed a north-easterly course between Scotland and Iceland, the deepest of the series crossing the Farøe on the morning of the 4th, with the barometer below 28 in., its immediate successor being nearly as deep as it crossed Shetland next morning. Two moved from our north-western coasts, south-eastward to London, then north-eastward to the North Sea; one appeared off the south of Ireland and struck off northward across Scotland, to the north of Scandinavia; one died out on reaching the west of

Scotland, others followed more variable paths. After the deep depression of the 18th, mentioned above, a change in the pressure distribution set in, the Iceland-Greenland anticyclone moving eastward and south-eastward and becoming established over Northern Europe and to some extent over the British Isles. The immediate result was to check the advance of the Atlantic disturbances, and to divert them to more southerly paths, to the Bay of Biscay and southward, but still near enough to affect our weather though to a modified degree.

Under these circumstances the month was of an exceedingly windy character, a strong or high wind (forces 6 and 7) being felt on every day in several localities, while on as many as twenty-four days, the first twenty-one in succession, at least a gale (force 8) was registered at one or more of the telegraphic reporting stations. Through the first seventeen days the strong winds and gales were in nearly all cases from points between South and West; from the 18th to the 20th, North-Westerly to Northerly; from the 21st to the 26th, North-Easterly; and from the 27th to the 30th, between East and South. The most tempestuous period of the month was associated with the passage of the two deep depressions of the 4th and 5th which followed each other at an interval of 24 hours. Out on the ocean ships experienced very severe weather, a South-Westerly to a North-Westerly whole gale to a hurricane (forces 10 to 12) being recorded. The approach of the first depression was marked by a decided increase of the South-Western wind on our coasts on the 3rd, a strong gale at Castlebay and Malin Head, and a whole gale at Wick. Next day the area affected was greatly enlarged, a whole gale at Blacksod Point, Castlebay, and Spurn Head, hurricane force at Malin Head. On the 5th the gale was general, and in many localities very violent, about half the stations a strong or whole gale, Donaghadee a storm (force 11), and Malin Head reporting a hurricane. By the 6th the centre disturbance had passed to Scandinavia, the gale over this country was moderating and veering more Westerly, but a whole gale was felt at Newquay, and again a hurricane on the Donegal coast. Anemometrical registers show that from the 3rd to the 7th gusts at the rate of 60 miles and upwards per hour occurred in various localities, on the 5th 70 miles at Dwyran (Anglesey), 73 at Alnwick Castle and at Pendennis Castle, 74 at Quilty, 75 at Holyhead, and 78 at Shields; and on the 7th 72 miles at Pendennis Castle. Afterwards the only instance of a higher force than that of a strong gale was at Newquay, on the 18th, where a whole gale from North-West blew.

While the wind was in the Western half of the compass, the weather maintained the excessively wet features of the second half of October. Day after day there were heavy falls of rain, occasionally varied by hail, sleet or snow. In all parts of the kingdom falls of an inch or more in a day were exceptionally numerous, the largest quantities reported being 3·3 in. at Seathwaite on the 3rd, 2·1 in. on the 5th, and 2 in. on the 8th at Cruachan, and 2·5 in. at Caragh Lake on the 14th. At Cruachan the aggregate for the first seventeen days was 12·5 in., of which an inch or more fell on as many as 6 days. The generally wettest day of the month was the 11th, involving the whole of the southern half of England, within which area at least 30 observers registered an inch and upwards, up to 1·8 in. at Kearsney, Kent. During the wet period which set in about October 19th, rain was of daily occurrence in many places, and the total rainfall was unusually large. For instance, at Gruline (Mull) and Cruachan there were 30 consecutive rain days, yielding 14·7 in. at the former station, 17·9 in. at the latter; Caragh Lake had 32 days, yielding 18·7 in.; Abersychan, 33 days, with 10·6 in.; and Newquay 35 days, with 5·8 in. Various observers, however, add a note to the effect that "most of the rain registered has fallen during the night and the days as a whole have been fine, with a good deal of sun." After November 19th the conditions were influenced by the Scandinavian anticyclone, and hardly any heavy falls of rain were experienced, the returns from many districts, especially in the west, showing nine or ten consecutive rainless days.

The temperature of the month was fairly uniform, about or rather below the normal. There were a few afternoon maxima of 60° in the first five days, and there were occasional night frosts, mostly about the 11th, 22nd and 26th, with the shade minimum 25° or lower in many places, 20° at Wokingham on the 22nd, and at Nairn on the 26th.

Thunderstorms were, for the time of the year, fairly common in the first ten days, particularly in Scotland. At Crieff, on the 2nd, the lightning was described as "fire flashes"; and on the 5th, during a very severe storm at Fort Augustus, "ball lightning" was reported in many places.

Aurora was observed at Liverpool on the 8th, at Aberdeen and Crathes on the 13th, and at Gordon Castle on the 16th.

Both inland and on the coasts there was an unusual absence of fog until the last two or three days of the month, and then it was of a local character.

There was a general decrease in the temperature of the coastal sea water as compared with October, lower by 5° and upwards in many localities, by as much as 9° at the entrance to Milford Haven. The water was, however, warmer than the air on shore, by 6° on the east coast of Ireland, 8° off Wick.

Rainfall.—Nearly all stations returned an excess of precipitation. Hawarden Bridge received 1·7 in., and Hoylake, Rhyl and Kingston-on-Soar, 1·9 in., but there were few totals less than $2\frac{1}{2}$ in., while the largest amounts were 8·8 in. at Cuckfield (Sussex), 13·5 in. at Cruachan, 14·4 in. on Plynlimmon, 14·6 in. at Treherbert, 16·5 in. at Glenquoich, and 18·1 in. at Seathwaite. The percentage of the normal ranged from 71 at Hawarden Bridge and Hoylake, 82 at Dunrossness, and 83 at Alnwick Castle to more than 200 in several localities, 245 at Worthing, and 257 at Nairn. As was the case in October, Kent and Sussex were excessively wet. Rain was measured on 13 days at Yarmouth, and on 14 days at Tottenham and Dursley (Glos.), but as a rule on more than 20 days, 28 at Mareham le Fen, Clongowes Wood and Newcastle (Wicklow), and 29 at Baltasound and Balrudeary.

Bright Sunshine.—There was an excess of insolation in most places, the records ranging from 28 hours in London (City), and 29 in Manchester (City) to 97 at Torquay and Fowey, and 103 at Falmouth. The percentage of the normal ranged from 87 at Aberdeen and Margate to 127 in London (City), 130 and upwards in various places, 160 at Stornoway, and 162 at York.

DECEMBER, 1911.

Pressure, Winds and Weather.—The very unsettled type of atmospheric conditions which set in as far back as October 19th was maintained throughout December which proved to be the most disturbed, the wettest and the stormiest month of the whole year. Wireless reports from numerous steamers showed that exceedingly boisterous weather prevailed over the northern half of the Atlantic throughout this period, under the influence of cyclonic systems, many of them of great depth. Some of these appear to have remained practically stationary for several days between the 50th parallel and Iceland, one from the 8th to the 13th, another from the 16th to the 22nd and a third from the 25th to the 31st. In addition to independent depressions which arrived on our coasts from various parts of the ocean, these great disturbances threw off many secondaries, which affected all parts of the British Isles, and did much to keep up the unusually rainy weather. Frequently the disturbances, primaries and secondaries, which visited this country were of considerable depth and intensity, the barometer sinking below 29 in. in several localities on as many as eight days. The lowest readings reported were on the 5th, 28·76 in. at Malin Head; on the 10th, 28·67 in. at Holyhead and Pembroke; on the 11th, 28·64 in. at Shields; on the 13th, 28·54 in. at Birr Castle, the minimum pressure of the month; on the 18th, 28·78 in. at Blacksod Point; on the 21st, 28·90 at Scilly; also on the 24th at Aberdeen; and on the 25th, 28·95 in. at Lerwick. On the other hand, the high pressure systems of the month were found over Continental countries, between Russia and the Spanish Peninsula, or stretching out over the Atlantic in the Madeira-Azores region. It was not until the last day of the year that the central space of one of these anticyclones approached these islands from the neighbourhood of the Baltic. There was a considerable increase of pressure in all districts, the barometer rising above 30 in. in Shetland, and 30·5 in. at Jersey.

With such a large preponderance of low readings it is obvious that the mean pressures for the entire month were very much lower than usual. The deficiency was smallest at Yarmouth 0·17 in. It exceeded $\frac{1}{4}$ in. at the majority of stations, and amounting to 0·41 in. at Blacksod Point. Owing to the high readings on one day only the range of pressure was large, exceeding $1\frac{1}{2}$ in. in most localities, and reaching $1\frac{3}{4}$ in. at Birr Castle and Pembroke. The mean distribution of pressure was of a strongly marked South-Westerly type, with a steeper gradient than the normal, but it was very uniform, the values ranging from 29·93 in. at Paris and 29·81 in. at Jersey to 29·41 in. at Blacksod Point, and 29·40 in. at Stornoway, the pressure minimum being out on the Atlantic, to the southward of Iceland, the barometer at Reykjavik averaging 29·03 in.

As a result of the almost uninterrupted succession of depressions the weather was in a boisterous state, and on every day from the 1st to the 26th the wind rose to the force of a gale (force 8) at one or more stations round our coasts, and on as many as 19 of these days it reached a strong gale (force 9). Speaking broadly the gales were not of a very violent character, the only instances of more than a strong gale recorded at the telegraphic reporting stations being a whole gale (force 10) at Dungeness on the 10th, at Scilly on the 12th, and at Jersey on the 21st. A feature of these gales, however, was the great frequency of severe gusts, as

registered by the automatic anemometers at many stations. Gusts equivalent in velocity to a strong gale (47-54 miles per hour) and a whole gale (55-63) miles were too numerous to be referred to in detail. It will suffice to mention those of 70 miles per hour and upwards. On the 5th, gusts of 78 miles per hour were registered at Quilty; on the 6th, 71 miles at Dwyran (Anglesey), and 79 miles at Pendennis Castle; on the 10th and 12th, 77 miles at Pendennis; on the 13th, 73 miles at Scilly; on the 18th, 75 miles at Pendennis, and 88 miles at Roche's Point; and on the 25th, 70 miles at Scilly and Quilty. Occasionally the wind drew into the South-East quarter or a little to the north of West, but as a general rule the gales experienced were from points between South and West. At the end of the month much quieter conditions obtained, and from the 27th to the 31st there was no gale force felt anywhere.

More striking than the gales was the persistency of the rains brought by successive disturbances, so that in many localities precipitation was measured on every day of the month, while over an extensive region there were only two or three days on which no rain fell. Many observers note that both as regards frequency and quantity it was the wettest December in their experience, the records at Ross, Herefordshire, showing it to have been the wettest in 94 years. Locally there have been one or two Decembers with more rain. The rainstorm of the 6th affected practically the whole of the kingdom, falls of an inch or more being very numerous, up to 1·8 in. at Cruachan, 1·9 in. at Killarney, and 2 in. at Sheepstor. Consequent upon the heavy rain there was a flood at Uldale on this occasion, and again after another downpour on the 10th, which was general, the amounts ranging up to 1·5 in. at Newton Rigg and Uldale, and 3·2 in. at Seathwaite. The 14th was another very wet day over the southern half of the kingdom, the Forest of Dean receiving 1½ in., and Abersychan 2 in. On the following day 2 in. fell at Crathes. At this period large falls were common daily in the western districts, bringing about disastrous floods in South Wales; also in the Thames Valley and other districts. At Abersychan there were seven days during the month each with from 1 in. to 2 in. of rain. During the remainder of the month the largest rainfall on any one day was 2·1 in. at Gruline (Mull), on the 23rd. From time to time there was snow or hail in a few places, but the falls were insignificant, the largest snowfalls reported being nearly 2 in. at West Linton on the 9th, and an inch at Cally on the 10th.

Notwithstanding this abnormal wetness, observers again note, as in the preceding two months, that though the month was rainy, most of the rain fell in the night, many days being sunny, and free from fog. The observer at Bucklebury, Berks, remarks: "It is singular that most of the heavy rainfall has taken place during the "night, and however heavy the rain it soon disappeared, and the roads and gardens "became quite free from water. The roads at present are like April."

As would have been expected in a winter month marked by persistent South-Westerly breezes, and as persistently damp weather, there was scarcely a sign of the cold which is normal to the season. Many of the observers refer to the unusual mildness of the period, and this is reflected in the mean temperature, which was everywhere in excess of the normal, and generally higher than the values for the preceding month, November. For the whole country the excess was about 3°, but at individual stations it was in numerous cases more than 4°, while in the south of England it exceeded 5° in several places, and at Eastbourne and Westminster it was nearly 6°. These remarkable figures, however, were due not so much to high day readings, as to the almost entire absence of night frosts. As a rule the range of temperature was small, there being few records of maxima above 55°, but 58° was reached at Trinity College, Dublin, on the 18th, and at Hawarden Bridge on the next day. There were also unusually few night minima below 27°, the lowest registered being 21° at Balmoral on the 8th, and 23° on the 10th. As against the unimportant frosts there were several exceedingly mild nights, with large numbers of records of 48° and upwards, 52° at Barnstaple, Penzance and Teignmouth on the morning of the 17th or of the 18th.

Thunderstorms occurred on several days, but they were of a local character, and comparatively unimportant, the only one described as severe being at Carrigoran on the 16th.

Aurora was seen on the 6th, 11th, 12th, (brilliant at Liverpool), 13th, 14th, 17th, 23rd and 26th. At Isleworth, on the 7th, a meteor was observed travelling eastward.

Fog was uncommon inland and on the coasts until after Christmas Day, when it was noted daily at many places inland and on the eastern and western coasts, but not along the south coast of England.

On all coasts the temperature of the sea water was lower than during November, by as much as 5° locally in the east, but the water was nearly everywhere warmer than the air on shore, by 5° on the coast of County Down.

Rainfall.—Although the month was so abnormally wet over the country generally there were a few places in Scotland where the aggregate totals were less than the average, Strathpeffer and Cawdor returning 72 per cent., Wick 87 per cent., and Dunrobin Castle 88 per cent. In numerous instances, however, the figures showed more than double the usual records, up to 276 per cent. at Cheltenham, 277 at Reading, 285 at Worthing, 293 at Swarraton, 315 at Portsmouth, 332 at Hereford, and 351 at Wilton, Salisbury. Scores of stations, not only in the mountainous districts in the western regions, but in the low level parts of southern England, returned more than 10 in., the largest aggregate being 18 in. at Sheepstor, 18·1 in. at Burrator and Seward's Cross, Devon, 21·5 in. at Glenquoich, 24·2 in. at Treherbert, and 27 in. at Seathwaite. At Fortrose, Rosshire, rain fell on 14 days, at Dursley, Gloucestershire, on 18 days, and at Tynemouth on 19 days, in all other localities on, 20 or more days.

Bright Sunshine.—The duration of sunshine was variable, but in most places it exceeded the normal. Stornoway had 62 per cent., Stonyhurst 69 per cent., and Newcastle-on-Tyne 71 per cent. against 152 per cent. at Deerness, 168 per cent. at Torquay, 200 per cent. at Westminster. The totals range from 10 hours at Bunhill Row, 13 at Glasgow, and 15 at Fort Augustus and Stornoway to 65 at Paignton, 66 at Salcombe, 69 at Falmouth, and 89 at Torquay.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

*Prepared in the Meteorological Office under the direction of**W. N. Shaw, LL.D., Sc.D., F.R.S.*

In compiling the following Tables (pp. 82 to 91) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South-East; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 12.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		4. ENGLAND, E.:—	
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Cromer ..	W. H. Archer, for Urban District Council.
Hampstead ..	E. L. Hawke, for the Hampstead Scientific Society.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Camden Square	H. Robert Mill, LL.D., D.Sc.	Norwich ..	A. W. Preston.
Westminster ..	The Meteorological Office.	(Eaton.)

* The Summary for "London" is for three calendar months. The "difference from average" is computed from the data for Camden Square, Norwood, and Kew, the average used being that for the 35 years 1871-1905. (Sunshine, 25 years 1881-1905, at Westminster and Kew.) A comparison with the averages for 65 years 1841-1905 for the Royal Observatory, Greenwich, is given in the following tables.

For corresponding values for the years since 1878, see Appendix I. to the Weekly Weather Report of the Meteorological Office, 1908.

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours (see above). At Falmouth, Kew and Stonyhurst the wind observations are based on the records of a standard Robinson anemometer (factor 2.2). (At Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer.) Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales.

Averages.—The averages used are—Temperature and Rainfall for the 35 years 1871-1905; Bright Sunshine for the 25 years 1881-1905. The values are published in Appendix III. to the Weekly Weather Report of the Meteorological Office for 1906.

Royal Observatory, Greenwich.—The averages for Temperature and Rainfall, with which the current values are compared, are for the 65 years 1841-1905. The averages for sunshine are for the period 1897-1911. The earth temperatures are taken at a depth of 3 ft. 2 in. The daily rainfall amounts are those for the 24 hours comprising the civil day. The numbers of days in each month of the quarter which were persistently overcast from midnight to midnight were 1, 0, 0, the number of persistently cloudless days were 0, 0, 0, the number of persistently foggy days were 0, 0, 0.

Mean Values for Districts.—The monthly mean values for districts for temperature, rainfall and sunshine are computed from the data for those stations which are included in the Weekly Weather Report of the Meteorological Office. The selection of stations is not identical with that included in this Report. The district values, as quoted, are comparable with the statistics published in previous issues of the Weekly Weather Report of which a summary is in course of preparation. The averages with which the current district values are compared are for the 25 years 1881-1905. The district values for amount of cloud and earth temperatures are taken from the Monthly Weather Report of the Meteorological Office.

[illegible]

INDEX OF URBAN DISTRICTS.

As existing on 31st December, 1911, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of that Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,160 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 154 were each co-extensive, at the end of December, 1911, with one or more Registration Areas.
